

The following public presentation was given on 12-13-2018 after the Village of Somerset Public Works meeting. The intent of the presentation is based on public input received during a public engagement held on November 15th. The discussions of the future uses for Village Park were based on a survey conducted last year by the community. Future park uses were evaluated by level of preference from low to high. During the input session the favored uses provided the basis for the development of concept plans for the Park.

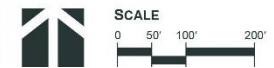

The resulting 3 concept plans are shown in this presentation. These concepts reflect the potential future of Village Park. The final Master Plan will be developed based on comments received during this presentation. The Master Plan is a road map to phasing and implementing Park improvements over several years and not immediate.

Some of the existing Park uses may change over time. The softball and baseball field will potential move to another site. The restroom building (which is moveable) may be replaced with a much larger facility with a kitchenette and large shelter space.

The final Master Plan will include a report that will show phasing of improvements and related cost of construction. The phasing diagram will document how existing uses may be built around in order to provide adequate planning for their relocation. Programing of Village Park may also enhance the overall Somerset Park System to be better utilized as a whole serving community events more efficient and effectively.
