Tip: Use any of the Comment tools to answer this reflection question in the yellow block:

What part of generating questions with Kami Questions AI felt the easiest for you?

Kami Questions AI

Challenge:
Create new auto-graded questions using Kami Questions AI

Step 1 · Click the Kami Questions AI icon in your toolbar

Step 2 · Choose the **Generate** option:

Generate AI✦
Use AI to create new auto-grading questions

Step 3 · Adjust these settings:

Choose your **Grade Level**, **Language**, and the pages you want the questions to be based on.

Click **Advanced Settings** to pick your **Question Type** and **Number of Questions**.

Select your **Difficulty Level** and **Depth of Knowledge Level**. Add extra questions if needed. Click **Generate Questions** to finish.

Step 4 · Edit and Assign:

Click any question or answer to **edit it**, or **drag** it to rearrange the order.

You can **show the question on the page**, show **only the answers**, **randomize the order**, and add **hints**. When you're done, **assign it through your LMS**.

How did creating an auto-graded question with Kami Questions AI help you understand UDL more deeply?

Kami Questions AI

Challenge:
Create new auto-graded questions about the following text using Kami Questions AI

Universal Design for Learning

Universal Design for Learning (UDL) is a framework that helps teachers create learning environments that work for every student by planning for variability from the start.

UDL emphasizes providing multiple ways for students to access information, engage with learning, and show what they know. Rather than relying on a single method, teachers design lessons that include options like visuals, audio, hands-on activities, and technology tools so students can choose what best supports their learning needs.

This flexible approach benefits all learners, including multilingual students, those with disabilities, and those who simply learn best in different ways.

In a UDL-aligned classroom, students are encouraged to take ownership of their learning while teachers act as designers who anticipate barriers and remove them before they appear.
