**THE HON CHRISTOPHER PYNE MP
MINISTER FOR EDUCATION
LEADER OF THE HOUSE
MEMBER FOR STURT**

From the Hon Christopher Pyne MP, Minister for Education:

I commend the Australian Mathematical Sciences Institute for this publication, which is an example of its leadership in mathematical education.

The Australian Mathematical Sciences Institute continues to support mathematical research, enhancing the experience of undergraduate and postgraduate students and mathematically preparing students entering tertiary education.

Ensuring that we have sufficient graduates in science, technology, engineering and mathematics is important for Australia in the development of globally competitive 21st century knowledge economies.

By choosing to study mathematics, or indeed science, technology and engineering, you will have a unique opportunity to contribute to the long-term prosperity of this country. These fields of endeavour are the building blocks for future technology breakthroughs and the new ideas that will improve our lives and Australia's prosperity. Australian businesses know this and they will increasingly need more and more Australians who are highly skilled in engineering, mathematics, the sciences and technology.

The future possibilities and opportunities are boundless.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Chris Pyne'.

Christopher Pyne MP

Maths ad(d)s 2014/2015 17th Edition

Maths Ad(d)s gathers together job advertisements that have recently appeared online. The common theme of the ads is mathematics and statistics, but the actual jobs vary across a very broad spectrum. They give an overview of possible careers available to prospective university students after graduation—if they include mathematics or statistics in their degrees.

Whether it is finance or tourism, business or government, medicine or marketing, just about every area of employment depends at some point on handling and interpreting data, and on predicting and modelling outcomes—in other words, the kind of expertise offered by people with training in mathematics and statistics. In addition, many employers seek mathematics and statistics graduates because they value their advanced problem-solving and analytical skills.

In Maths Ad(d)s you will discover career opportunities combining mathematics and statistics with health, computing, data analysis, biology and meteorology, just to name a few. You could end up investigating the geometry of liquid crystals, consulting for a sports company, or even being part of the discovery of a medical breakthrough.

While many of the jobs listed here are based in big cities, others offer an opportunity to work in regional centres or a chance to live overseas.

The job advertisements in this 17th edition are completely new and represent only a fraction of the advertised positions found in late months of 2013 and early months of 2014.

Whether you already know your career plans or you just cannot decide what you want to do or be, you can be sure that mathematics adds an extra dimension to your future options!

**A qualification
in mathematics
and statistics
consistently rates
highly as you will
discover throughout
this booklet.**

About the advertisements

- These advertisements are only a sample. By no means should you think that they set the boundaries for what is possible now or in the future.
- We hope that Maths Ad(d)s has helped you to see that adding mathematics and statistics to your skills brings great reward.
- With flexibility, enthusiasm and a positive attitude when you apply for a position, many opportunities will be open to you.

Graduate programs

One of your options for making the transition from university to the workforce is to join a graduate program. There are many programs available in government departments and large organisations. They usually run for one or two years, during which time you are an employee of the organisation. You will receive **mentoring** and **training**, gain valuable **experience** in the workplace, and benefit from networking and **social activities**.

Apply for graduate programs in the final year of your degree. The closing dates for applications vary, but some close in April, so make sure you get in early. You can have the **security** of a job offer before you even finish your degree!

The range of programs changes from year to year. Here are just some examples of programs that may be available to **mathematics and statistics graduates**.

Accounting	Ernst & Young, KPMG, PwC
Consulting	Accenture, AECOM, SMS Management & Technology
Defence	Department of Defence, Altitude @ DSD, DSTO
Energy	AEMO, Chevron
Finance	ANZ, Bankwest, CBA, GE, HSBC, IMC, Macquarie, NAB, Optiver, Queensland Treasury, Westpac
Government	Australian Bureau of Statistics (ABS), Australian Electoral Commission (AEC), Australian Prudential Regulation Authority (APRA), Bureau of Meteorology (BoM)
Insurance	IAG, Suncorp
Teaching	Teach for Australia, teach.NSW
Transport	Aurecon, Qantas

There are lots more! Visit your university **career centre** or search the web:

- www.unigrad.com.au

Bioinformatics

Gene based drug therapies and medical breakthroughs.

Bioinformatics can lead to amazing discoveries by combining mathematics, statistics, engineering and computer science to manage and study biological information and processes.

Junior Bioinformatician

East Melbourne
Permanent Full Time

Data Analyst / Junior Bioinformatician
12 Months Fixed-Term

Peter MacCallum Cancer Centre (Peter Mac) is the largest cancer research group in Australia, uniquely integrating basic, translational and clinical research with patient care in the setting of a specialist cancer hospital.

We are currently seeking a Junior Bioinformatician to provide general programming and data analysis support to the Bioinformatics Core Facility. This role would suit a recent graduate in Computer Science, Statistics or a related discipline looking to forge a career in bioinformatics or cancer research.

As a strong communicator and team player, the successful candidate will be responsible for developing and coordinating software programs related to bioinformatics analysis, as well as providing programming support to multiple cancer research projects.

Excellent programming skills and academic records are essential. Experience with either Next Generation Sequencing or other high-throughput genomics technologies will be highly regarded but not essential. Experience with the unix is essential.

To view the position description or submit your application please click the 'Apply Now' button below.

Offers of employment are subject to the candidate providing a satisfactory National Police Certificate (police check) or the equivalent. You may also be required to obtain a Working with Children Check when applying for a position at Peter Mac.

Australia's only public hospital solely dedicated to cancer. Visit us at www.petermac.org.

Research Fellow, Grade 1

Reference:

Element: Griffith School of Environment

Work type: Fixed term (two years)

Overview:

The Griffith School of Environment have the largest group of environmental professionals in any university in Australia, and amongst the largest in the world. We are a world leader in the training of environmental professionals and related natural and social science research. Environmental programs offered at Griffith University have always been defined to include social and cultural issues equally with the biological and physical issues.

This is a fixed term (two years), full time position based at the Nathan campus.

The role:

The primary role of this position is to provide data analysis and modelling support to several projects in disease ecology being undertaken by [redacted]. These projects include an ARC funded study of Tasmanian Devil facial tumour disease, a National Hendra Virus Research Program project on modelling the dynamics of Hendra virus infection in bats and a Queensland koala research grant project on assessing the risk of disease to the viability of Queensland koala populations. The appointee will also be expected to provide some data analysis and modelling support to other research projects being undertaken within the group.

In addition to this core task of data analysis and modelling, the appointee will be expected to prepare scientific manuscripts for publication in association with other members of the research teams working on each of the projects. The expectation is that the appointee would be an author on publications arising from each of the projects and would be the first or corresponding author on at least some publications. There will also be an opportunity for limited participation in fieldwork and participation in international workshops and conferences.

The appointee will join a rapidly expanding research group in disease ecology at Griffith University and will be expected to contribute to mentoring of research students within the group as well as participating in the wider intellectual community in ecology and environmental science at Griffith.

The person:

The position will suit a Ph.D. graduate with strong interests in applying quantitative approaches to addressing important ecological questions. The appointee may have formal training in mathematical techniques and statistics, with an interest to apply them in an ecological context or alternatively the appointee may have formal training in ecology, with a strong quantitative skill set. Previous experience in disease ecology is an advantage, but is not essential. All projects require working with teams with members both inside and outside Griffith University with a range of expertise. The ability to work closely with a team and to interact with scientists with a range of backgrounds is therefore essential. Strong oral and written communication skills and the ability to work independently without close supervision and to develop novel research directions are essential.

Salary range:

Re

Biology

Medical imaging, plant biology, genetics, ecology...

There are many great opportunities to mix mathematics and statistics with the biological sciences.

... The ability to work with a range of backgrounds is therefore essential. Strong oral and written communication skills and the ability to work independently without close supervision and to develop novel research directions are essential.

Salary range:

Research Fellow, Grade 1: \$65,698 - \$77,281 per annum. Salary package including 17% employer superannuation contribution: \$76,867 - \$90,420 per annum.

**REF14/41 Trainee Biostatistician, Clerk
Grade 7/8, Centre for Epidemiology**

Trainee Biostatistician

Location: North Sydney
 Classification & Grade: Clerk Grade 7/8
 Salary Range: \$83,962 - \$92,940 p.a
 Vacancy Type: Temporary Full Time (Up to 3 years)
 Vacancy Reference:
 Closing Date:

Position Purpose

Trainees will gain experience in biostatistics through supervised full-time work based placements, and undertake the Master of Biostatistics at the University of Sydney part-time. Subject to the signing of a Deed of Agreement, the NSW Ministry of Health will pay university and associated fees, and appropriate study leave will be granted. Traineeships will commence in August 2014.

To be successful in this position, you will have successfully completed an honours degree majoring in statistics, or an equivalent qualification, will have an aptitude for advanced mathematical work, high level knowledge of statistical concepts and methods, and extensive experience in the use of statistical software packages.

Your application should include:

1. a covering letter [maximum two pages] in response to the two targeted questions below.
2. an up-to-date resume which clearly details your skills and experience as relevant to this role, including evidence of your aptitude for advanced mathematical work, for example by a high level of achievement in high school or undergraduate mathematics.
3. a full academic transcript for your relevant qualification(s).
4. evidence of your residency status.

You are not required to address selection criteria. Please review Applying for a role in the NSW Public Service for more guidance.

Targeted Questions:

1. Describe your experience of using statistical software packages to manipulate and analyse data sets, including any experience you have of working with health data.
2. Give an example of a project that you have been involved in where you were required to perform a significant amount of data analysis. It might be a project with a large data set, or one where the analysis was complex. Include the project background, your role in the project, how you went about refining the research questions and determining the most appropriate statistical methods, and outline the conclusions from the data analysis in layman's terms.

Biostatistics

Hot opportunities!

Biostatistics is an exciting area for mathematics and statistics graduates. This ad gives just one example of the many opportunities that mix statistics with the biological sciences in a challenging and rewarding career.

You are not required to address selection criteria. Please review Applying for a role in the NSW Public Service for more guidance.

You are not required to address selection criteria. Please review Applying for a role in the NSW Public Service for more guidance.

Empower Results®

Remuneration Analyst

Entry level role for a **numerical graduate**
 Clear career path with leadership opportunities
 Expanding team looking for motivated members to join their team

Aon Hewitt, part of the Aon Corporation, provides consulting services and solutions to clients in the areas of People Risk Solutions, Health & Benefits, Retirement, Compensation, Talent & Organisation, Engagement & Performance Analytics and Wealth Management.

Aon Hewitt Reward business is made up of three complimentary areas; reward advisory consulting, reward analytics, and remuneration training and tools.

Each year companies spend over \$600 billion on pay and benefits in Australia. Usually, it is an employer's largest expense; unfortunately it is challenging to manage effectively. We help organisations make more effective use of their reward policies and programs. We provide balanced, innovative advice and solutions to all aspects of executive sales and general employee remuneration.

We have an opportunity for a highly talented, ambitious individual to manage and develop remuneration salary surveys with external remuneration/ reward clients. This is a great opportunity for a motivated mathematical minded and analytical individual to join our successful and expanding operation as a Remuneration Analyst.

You will be responsible for:

- Interpreting, developing and presenting survey results to internal and external stakeholder
- Ensuring retention of survey participants to maintain robust and credible data
- Serving as the point of contact for select industry groups, including presenting survey results at remuneration forums, managing customised surveys and supporting other internal and external events and initiatives
- Working with the Reward Advisory team as required to deliver client projects (such as benchmarking, data analysis, market research and job evaluation)
- Supporting the broader team in developing capability and managing specific remuneration service areas (such as job evaluation, remuneration training, survey process improvement, economic indicators, or other areas as assigned)

To be successful in this role you will display:

- Strong analytical/ numerical skills with a genuine interest and ability in finding insights in data
- The ability to balance workload and adjust as priorities shift
- Excellent presentation skills
- High attention to detail
- Basic understanding of HR/remuneration practices
- Initiative to suggest improvements as identified from analysing information
- The ability to work under pressure and to meet deadlines

This is an exciting opportunity for a dedicated person to join the Aon Hewitt business to drive success. You will enjoy working within this fast paced and dynamic team and in return be rewarded for your hard work.

Aon is an equal opportunity employer and we invite you to be part of an organisation that has a diverse workplace, values continuous learning and supports many charities and environmental initiatives. At Aon, we strive to maintain a balance between work, community and our valued employees.

Aon is the Principal Sponsor of Manchester United.

Business & Consulting

Read between the lines...

The increasing availability, awareness and dependence on commercial data have made the business sector a growth area for mathematics and statistics employment possibilities. These jobs are not always titled "mathematician" or "statistician", but the fine print makes it clear that's who they want...

Analytics Business Analyst | Mathematical Bkgnd | Global Org.

- Highly challenging role
- State of the art technologies
- Global leader

Our client is a global leader that is responsible for a cutting edge technology used by some of the world's leading companies that include the telecommunication, defence, logistics and resources industries.

Currently they require a strong Business Analyst that has a strong mathematical background that can take data, statistics and information and convert this to information relevant to improving business efficiencies.

To be successful for this role you will have

- A strong mathematics background (Either a maths related degree, previous career with high level mathematics)
- Strong business acumen
- Strong client facing skills
- Business analysis experience
- Previous experience with large amounts of business intelligence or data that has been used to present business cases that improve processes and/or costs
- Ability to travel from time to time

Why you want this role

- You will work for one of the world's leading technology specialists
- Your role will have a direct and huge impact on the growth of new business for WA
- You will have a fully autonomous role that will offer challenges and job satisfaction
- Opportunities to travel overseas and interstate

This is a role that will be filled quickly. There are not many roles like this in WA. Apply now before you miss out with CV and brief covering letter stating availability and salary expectations.

Email: Please click the 'Apply Now' button below.

CCI Graduate Fellow Program 2014

- **Apply for CSIRO Computational Informatics Graduate Fellow Program**
- **Opportunity for talented post-honours students to solve real-world problems and experience a research career with CSIRO**
- **Access CSIRO's world-class facilities**

The 2014 Graduate Fellow Program is an initiative by CSIRO Computational Informatics which aims to support the computational informatics pipeline in Australia and encourage talented students to try out a career in research.

The program will offer a handful of talented post-honours students the chance to solve real-world problems and experience a research career with CSIRO. Taking an "apprentice approach", Fellows will be mentored by leading research scientists and work on a range of exciting projects with the potential for travel to a conference at the end of the second year.

This year there are 5 fellowship projects on offer, two in Clayton and three in Acton. These are available to graduates who have completed an undergraduate degree (preferably with honours) in the areas of mathematics, statistics, computer science and engineering. The program runs for 2 years during which time fellows are paid a salary as a CSIRO employee.

Location: Clayton, VIC & Acton, ACT

Salary: \$63K per annum plus up to 15.4% superannuation

Tenure: 2 year full-time term appointment

Reference:

Junior Data Scientist - Kogan.com

THE COMPANY

Kogan.com is Australia's largest online retailer. Sitting at the forefront of technology, Kogan.com is dedicated to providing consumers with the latest and best in consumer electronics for the most affordable prices.

THE ROLE

Due to rapid expansion, we are looking for a Junior Data Scientist to join our team.

In the role of Junior Data Scientist, you will be responsible for conducting thorough analyses of Kogan.com data. You will work closely with department heads, the marketing team, the IT team, and executive management to understand business objectives, analyse data and produce reports containing actionable insights.

The role will include tasks such as:

- Mine data from analytics platforms
- Generate and interpret data sets to understand trends and find actionable insights
- Analyse departmental and staff performance
- Perform cohort analyses to determine how groups of customers behave over time
- Report on and communicate findings to the wider business
- Advise as an internal subject matter expert in predictive analytics and machine learning
- Set up new types of reporting and schedule reports to be sent at regular intervals to relevant team members
- Keep a record of tests completed along with their implications for how we should conduct our business

ESSENTIAL SKILLS AND EXPERIENCE

- Ability to use data to find ways to increase sales and improve profitability
- Strong knowledge of Python
- Strong data mining, statistical modelling and analysis skills
- Strong problem solving skills
- An understanding of predictive analytics and big data
- A passion for extracting insights from data
- Excellent verbal and written communication skills
- Ability to deliver projects to a high standard within agreed timeframes

DESIRABLE SKILLS AND EXPERIENCE

- Experience using the R statistical programming language
- A degree in mathematics, data mining, informatics, big data, computer science or similar

Data Science

More than just crunching numbers.

Working with leading edge companies, mathematicians and statisticians are highly employable in this exciting and growing field. Data scientists are described as part analyst and part artist using their skills in making discoveries and gaining new insights through exploring data.

...sales and
...age of Python
...ing data mining, statistical modelling and analysis skills

- Strong problem solving skills
- An understanding of predictive analytics and big data
- A passion for extracting insights from data
- Excellent verbal and written communication skills
- Ability to deliver projects to a high standard within agreed timeframes

DESIRABLE SKILLS AND EXPERIENCE

- Experience using the R statistical programming language
- A degree in mathematics, data mining, informatics, big data, computer science or similar
- Good understanding of machine learning algorithms

WHAT'S ON OFFER

- Work with a team of technologists who are experts in their respective domains
- A vibrant and inclusive company culture
- A meritocracy where excellent performance is recognised and rewarded
- A spacious and comfortable office within 15 minutes walk of Melbourne's CBD
- A competitive salary package commensurate with experience

TO APPLY

Please send us your resume along with a detailed cover letter explaining:

- In your first month at Kogan, how you would use data to find ways to increase sales and improve profitability.

Please send your resume and cover letter to:

Australia's largest online retailer

★ [Kogan.com/au/careers](https://www.kogan.com/au/careers)

Senior Data Analyst | Sydney | \$110k + super | Analytics

Global organisation
Up to \$110k + super
Apply cutting edge analytics to solve business problems

We are currently representing a leading financial service company, who are looking to optimise operational processes through the use of data and analytics. Partnering with operation leaders, you will take responsibility for the development of actionable insights to improve operational activity across the claims and underwriting businesses.

Key accountabilities would include;

- Develop predictive analytics to drive, measure and forecast operational performance
- Identify and promote the capture of relevant operations data to support decision making
- Support business leaders by providing actionable insights on operational issues
- Drive the automation of reports
- Engage and influence business leaders on analysis, in order to drive key strategic changes and ultimately the optimisation of operational performance

To be considered, you will need;

- A Bachelor Degree in a numerate discipline i.e. Mathematics, Statistics, Economics, Engineering, IT
- 3 - 5+ years in an analytical role ideally within financial services
- Advanced programming skills in SAS
- Strong knowledge of statistical concepts and models i.e. scorecards, predictive models
- Strong communication skills; an ability to engage and influence senior stakeholders

This is an exciting opportunity to join one of Australia's best known brands. Please apply online or for more information, contact

For more information on this opportunity please contact Bluefin Resources

If this job isn't quite what you are looking for, please feel free to contact us to discuss other opportunities in the market place.

Graduates, Data Analysts, Statisticians, Modellers, Analytics Management, Consulting, Account Management & Sales, in the areas of: Customer Insights & Database Marketing, Pricing, Fraud, Credit Risk, Performance Management, Strategy & Planning, Data Management, Forecasting, Econometrics & Financial Modelling

Looking for the next big thing?

Data Scientist

It's a great time to be part of AGL Energy, as we lead the way in generating sustainable power solutions for all Australians. With a heritage of 175 years and listed in the top 50 companies on the ASX, AGL offers a genuinely diverse, safe and supportive work environment, where "actions not words" fosters a culture of achievement and friendship.

Based in our Melbourne office, the role of Data Scientist will identify and address complex business problems by providing analysis, insights and models to business stakeholders, thus supporting and driving high-quality decision making, process improvements and a competitive advantage. This is achieved through direct engagement with business representatives, employing deep expertise in data science with a particular focus on machine learning and statistics applied to produce predictive analytics.

To be successful in this role you will be tertiary qualified in a numerate or quantitative discipline such as mathematics, statistics, computer science, physics, chemistry, engineering, economics, or econometrics. You will also possess:

- Demonstrable excellence in numeracy, including a sound grasp of concepts of probability
- The conceptual ability to see linkages between apparently unrelated matters. Able to develop and deploy new or unusual approaches to problems.
- Excellence in effective visual communication of complex concepts and numerical data.
- Ability to conduct investigations, selecting and interrogating appropriate information sources, and developing robust inferences and solution designs based upon such investigations.
- Demonstrable initiative and ability to work without close supervision.
- Proven basic competence with SQL. Very high competence with Microsoft Excel.
- Strong competence in a high level programming language such as R, SAS, Matlab.
- Skills in machine learning and/or statistical design, construction and operation of appropriate models as applicable to business problems.
- Proven experience in data preparation and interrogation which could be demonstrated through experience in data formatting, manipulation, merging and transformation for exploratory analysis and modelling.

In addition to these key skills and attributes, you will also have a natural intellectual curiosity, will be passionate about data and have created complex models which have helped turn seemingly disparate data into something a lay-person can understand and use to help their business. You will be an excellent communicator with experience in a related corporate or research environment. This is an ideal role for someone wanting to make a real difference in a vibrant industry and Business Analytics Hub.

Sound like the change you have been looking for? If you are a strong team player and an innovative thinker, Put your energy into ACTION and apply to AGL Careers now via the online application link.

For a confidential discussion regarding this opportunity please contact

Expect More. Do More!

Economics

Help build a strong economy.

Want a future that is supported by a strong economy? Well those in economics play an important role in this regard by interpreting past and current data to provide guidance for the future. What type of people are good with data? Well, those with mathematics and statistics...

maths:
make your career count

mathscareers.org.au

Mathematicians need to be able to communicate their work to non-specialists. Helping the bank solve problems with mathematics is core to what I do. Frequently changing economic circumstances, such as upturns and downturns in the global economy, necessitate the development of new mathematical models.

Financial Analyst

John Roumeliotis
National Australia Bank

Econometrics data analyst - SAS/SPSS

- An excellent company culture
- High end analytical work
- Fast paced environment

Summary of the Position

This is an exciting opportunity for an junior-mid level econometrician to join an established media agency. The company are looking for someone who has strong econometric skills in the sense of developing and maintaining models. The company has an excellent culture, it is supportive of its employees and there is a work hard play hard culture. The work is fast paced and dynamic and you will be working on multiple projects at one time. You will find working within this agency is rewarding and you will also have the opportunity to work with well known global brands.

We are looking for some with around 2 years working experience. It is essential you have worked in a media or agency environment.

In addition you must have excellent communication skills and the ability to present findings. The company culture is sociable and a work hard play hard atmosphere, it is dynamic and therefore fits a certain personality.

Summary of your Role

- Data analysis
- Forecasting
- Econometric modelling - linear, multivariate regression etc
- Structural equation modelling
- Attribution modelling
- Presentation of findings to various internal and external stakeholders
- Develop scenario planning tools
- Use of R/SPSS/E-views for analysis
- Use of SQL an VBA for programming
- Logistical regression

Experience Required

- Strong knowledge of SAS, SPSS or R
- Experience working in a media or agency environment is essential
- Programming experience in SQL or VBA is a bonus
- A mathematical background
- Tertiary degree in maths, stats or related degree
- Expert in excel
- MS Office skills
- Strong communication and presentation skills in order to liaise and present to stakeholders
- An ability to work in a fast paced environment

If you have the required experience and are interested in the position please apply directly or contact

PRECISION
SOURCING

Energy

Maths grads, we need you!

Two key roles of the energy sector revolve around environmental impact issues and cost to the customer. Mathematicians are invaluable, as they can assist in improving the efficiency of energy distribution and consumption. Here is just one example of the importance of mathematics in the energy sector.

Energy Forecasting Analyst

- Opportunity to contribute to the future of Australia's energy sector
- Collaborate with stakeholders right across industry
- Apply technical skills to real world problems
- Attractive Remuneration plus Performance bonus

We currently have 4 great opportunities for Analysts to join AEMO's Energy Forecasting team in either one of our Melbourne, Adelaide, Sydney or Brisbane offices (Melbourne and Adelaide locations preferred).

Reporting to the Senior Manager Energy Forecasting, this role will have you focused on:

- Applying your statistical and mathematical modeling skills to develop short and long term energy forecasts
- Developing technical solutions to problems that impact energy demand
- Coordinating the delivery of forecasting projects
- Providing analytical and data management support to energy forecasting activities

If successful, you will be involved in developing sophisticated statistical models, producing reports, developing and maintaining datasets, tools and systems, providing advice to the business on demand statistics, as well as managing relationships with staff, consultants, and internal and external stakeholders.

As the ideal candidate, you will have:

- Approximately 2 years' experience ideally in the energy industry in a similar role coupled with relevant tertiary qualifications in a numerical discipline such as statistics, mathematics, econometrics, science, engineering, or economics
- Strong programming and data management skills, with experience in statistical or mathematical modelling and database development - experience with R would be highly regarded

...and maintaining datasets, tools and systems, providing advice to the business on demand statistics, as well as managing relationships with staff, consultants, and internal and external stakeholders.

As the ideal candidate, you will have:

- Approximately 2 years' experience ideally in the energy industry in a similar role coupled with relevant tertiary qualifications in a numerical discipline such as statistics, mathematics, econometrics, science, engineering, or economics
- Strong programming and data management skills, with experience in statistical or mathematical modelling and database development - experience with R would be highly regarded
- Strong problem solving and analytical skills
- Ability to adapt to a changing fast-paced working environment and to work through technical issues in a timely manner
- Ability to take ownership and drive significant pieces of analytical work
- Effective verbal and written communication skills - with the ability to engage and collaborate with stakeholders and prepare and present high quality reports

The Company

The Australian Energy Market Operator (AEMO) plays an integral role in planning, developing and operating markets that respond to Australia's gas and electricity needs. We support long-term investment in Australia's energy networks and collaborate closely with government, communities and other stakeholders. We are building an exceptional organisation to effectively manage Australia's energy grids and markets, and to deliver value to our stakeholders. AEMO's vision is to be pivotal to markets that secure Australia's energy needs.

THE UNIVERSITY
of ADELAIDE

CRICOS Provider Number 00123M

Sharpen your mind with mathematics at Adelaide

In today's complex environment, a degree in mathematical sciences will teach you a universal language used to describe, model and understand the world around us.

At the University of Adelaide, you'll learn from expert lecturers and some of the world's top researchers in a vibrant environment. You'll specialise in applied mathematics, pure mathematics or statistics. Your degree will help you tackle real world issues and open doors to rewarding careers in Australia and beyond.

As a high performing student, you'll also have the opportunity to undertake an honours year or a master's degree to deepen your mathematical knowledge after completing your bachelor degree. These advanced qualifications are highly regarded by employers and are preparation for research in the mathematical sciences.

Our graduates are highly regarded for their creativity, problem-solving abilities and research skills, and are sought after by a wide range of employers.

For a rewarding and flexible career using mathematics and statistics, study at the University of Adelaide - ranked in the top 1% of universities worldwide.

- > Bachelor of Mathematical Sciences
- > Bachelor of Mathematical Sciences (Advanced)
- > Bachelor of Mathematical and Computer Sciences

seek LIGHT

Credit Risk Modellers | Sydney | SAS

Opportunity to work with a leading Australian Bank
Innovative and growing business unit
Opportunity to develop credit risk models to support the credit portfolio

One of Australia's leading financial service organisations is currently seeking a number of Credit Risk Modelling Analysts to join a growing Credit Risk Modelling unit. Through the development of cutting edge statistical models, you will help drive the bank's credit portfolio's profitability and performance, ensuring risks are mitigated, regulatory requirements are adhered to and transparent reports are communicated across the wider group.

Accountabilities would include;

- Development of statistical models; including Application & Behavioural Scorecards, Probability of Default, Loss Given Default and Exposure to Default
- Drive the use of new modelling methodologies; this would include researching new approaches and challenging existing methodology
- Development of reports and loan loss provisioning models to support Group and APRA requirements
- Through the use of statistical models, enhance existing credit decisioning and risk management processes
- Forge stronger stakeholder relationships across the wider group; marketing, product, and group risk

To be considered for the role you will need;

- A degree in a quantitative discipline i.e. mathematics, statistics, actuarial, engineering etc.
- 2+ years' experience in an analytical role
- Advanced SAS programming skills
- Proven experience in the development of predictive models
- Strong written and verbal communications skills

This is an exciting opportunity to join one of Australia's best known brands. Please apply on below or for more information,

Graduates, Data Analysts, Statisticians, Modellers, Analytics Management, Consulting, Account Management & Sales, in the areas of: Customer Insights & Database Marketing, Pricing, Fraud, Credit Risk, Performance Management, Strategy & Planning, Data Management, Forecasting, Econometrics & Financial Modelling

Finance

Not just for commerce graduates.

It's not just commerce graduates who are employed in the finance industry!

The finance sector is a big employer of mathematics graduates because of the advanced quantitative and analytical skills that come from studying maths.

"Finance" is an umbrella term covering banking, the stock market and other forms of investment, insurance, and the regulation of these areas.

Financial Modelling Analyst

- ASX 200 client list
- Highly challenging and rewarding environment
- Work with the best in the business

This is a highly successful and reputable specialist financial modelling firm; focusing on delivering bespoke solutions to a very broad and impressive range of clients featuring many of the ASX listed firms also government and other SME's Australia wide.

There is much faster career progression than large corporates and better earnings potential due to the profit share scheme available on top of competitive salary rates. Also there is a great deal of flexibility in working, so you should expect much more favourable work / life balance versus that in highly demanding larger firms.

This role would suit a highly analytical mind; for people with a passion for problem solving and who enjoy being constantly challenged. You must live and breathe excel. This will be a client facing role from day one, dealing with senior executives up to CEO level responsible for company growth and strategy so you must have excellent communication skills both verbal and written as you will be in constant interaction with clients both in person and by phone / email.

Analysts must have;

- 0 - 4 years experience with advanced level excel
- Strong financial analytics and business reporting skills.
- Strong numerical logic / problem solving skills
- Strong interpersonal and presentation skills
- Minimum Bachelors level education in a maths / finance / economics focused subject with a strong academic record

Experienced analysts also encouraged to apply.

IMPORTANT: Applications must be accompanied with a university transcript, please send this in supplement to your CV. If you have trouble submitting your transcript online please email direct to hr@bradmanrecruitment.com. Applications unaccompanied by transcripts will not be considered. Distinction / High Distinction grades are expected for all analysts relevant modelling / numerical units.

To discuss this position please call [0295959595](tel:0295959595) on the number below or submit CV.

2015 ABS Graduate Development Program (GDP)

"Statistics tell the story"

An exciting opportunity is now available to be part of the 2015 ABS Graduate Development Program (GDP). The Australian Bureau of Statistics (ABS) is changing. Over the next few years we will be transforming how we collect, collate, manage, use, reuse and release statistical information.

To help us make these changes we require graduates who are motivated, innovative and committed. To be part of the team that is moving the ABS forward, we require Information Communication & Technology (ICT) graduates and graduates with a background in mathematics and econometrics to provide specialised support. However we also need graduates from a wide variety of disciplines to work right across our business areas.

About the program:

The nine month GDP program commencing in February 2015 will provide practical on-the-job training through team based work or projects. The GDP involves structured formal training and development activities designed to:

- assist in the transition into the ABS and Australian Public Service
- provide training specific to your subject matter area
- provide work rotations and formal projects (subject to areas placed)
- provide support through a buddy system and encourage other networking opportunities.

What we offer:

- Competitive remuneration package of \$59,368 plus superannuation for ICT graduates or \$54,130 plus superannuation for all others.
- Relocation assistance for graduates moving to Canberra, where the majority of graduate positions are located.
- Salary advancement on successful completion of the program.
- A flexible workplace supporting a healthy work- life balance.

Eligibility:

- You must be an Australian Citizen before the program commences in January 2015.
- You must have completed at least an Australian recognised undergraduate qualification, before the program commences in 2015.
- Your most recent qualification (at the Bachelor degree level, or higher) must have been completed between 1 Jan 2012 – 31 Jan 2015
- You must be prepared to undertake a character check and medical assessment prior to commencing your employment.

Government

Make a difference.

Government departments require personnel of the highest quality to make important decisions affecting the everyday lives of average Australians. Maths and stats graduates receive rigorous training to become analytical thinkers and so are highly suited to this work. Statistics even has its own government agency—the Australian Bureau of Statistics providing statistics on social and economic matters used by state and federal governments and the community.

...Canberra, where the majority of graduate positions are located.

...on successful completion of the program.

...workplace supporting a healthy work- life balance.

Eligibility:

- You must be an Australian Citizen before the program commences in January 2015.
- You must have completed at least an Australian recognised undergraduate qualification, before the program commences in 2015.
- Your most recent qualification (at the Bachelor degree level, or higher) must have been completed between 1 Jan 2012 – 31 Jan 2015
- You must be prepared to undertake a character check and medical assessment prior to commencing your employment.

Interested in being part of the transformation?

If this opportunity appeals to you then find out more by first obtaining an applicant information kit at www.abs.gov.au/careers or contact National Recruitment on 1300 361 130.

To apply to the 2015 ABS Graduate Development Program, you must submit an application online via our eRecruitment system. Applications will be open from 12 Feb 2015 to 11 Mar 2015. For more information about the application process, please refer to our [website](#). Please quote reference no. 1500000000 in all correspondence.

The ABS encourages and values a diverse workforce. Aboriginal and Torres Strait Islander people and people with disability are encouraged to apply.

Health

Of critical importance.

Current and future healthcare relies crucially on analysis of numerical data. From cancer research to infectious disease, the work is important and varied, and statistics plays a central role.

OPTUM
Good for the system.™

Senior Health Economics Analyst

Optum™ is a global leader in health information, health technology and life sciences consulting. The Optum Asia Pacific Life Sciences group based in Lilyfield, Sydney has an outstanding track record in evidence-based medicine and reimbursement for health technologies across a broad range of therapeutic areas.

We are looking for an experienced and motivated Senior Health Economics Analyst to join the team. In this role, you will be involved in all aspects of research activities, including technical support, planning and performing economic/outcomes evaluations in health care research, and the analysis and reporting of studies.

Responsibilities will include:

- Implementing the technical components of health economic studies including proposal development, analysis and interpretation
- Preparation and quality assurance of study deliverables, including models, final reports, manuscripts, posters and presentations
- Perform programming, statistical analyses and/or modelling and prepare required graphs, tables and figures using the appropriate tools
- Assist, mentor and train junior staff, and collaborate with other senior staff
- Statistical and technical support to clients and other members in the team.

You will have a post graduate qualification in a related field and training / experience in health economics and/or outcomes research. You will have strong quantitative skills and an ability to communicate strategic ideas clearly, and exceptional interpersonal skills and an ability to communicate in a confident and diplomatic manner.

At Optum we take pride in delivering work of the highest quality. We encourage our staff to take ownership of their work, and recognise and reward staff accordingly. Our aim is to bring scientific rigour to everything we do, whilst recognising the budget and time constraints of our clients. We are committed to providing a friendly and co-operative working environment, and we support the ongoing professional development of our staff.

Please submit applications (including a covering letter, full curriculum vitae and a copy of your academic transcript) to

Working together to lessen
the impact of cancer

Data Analyst

The Role

The Data Analyst is responsible for the maintenance, management and analysis of BreastScreen NSW data, to support performance monitoring, reporting and new research into cancer screening and prevention. This will include undertaking investigative analysis and modelling, implementing data quality review and cleansing processes, as well as carrying out routine reporting and data requests.

Skills and Experience

- Appropriate tertiary qualifications in a quantitative discipline, such as **statistics/ biostatistics, mathematics**, actuarial studies or engineering, or other related discipline. OR demonstrated relevant equivalent professional experience and training.
- Demonstrated proficiency in the use of data analysis tools, including scripting in SAS and SQL.
- Experience in data analysis and data validation.
- Well developed organising, analytical thinking and problem solving skills, the capacity to successfully manage competing priorities and meet deadlines.
- Excellent oral and written communication, interpersonal and customer service skills; ability to communicate with technical and non-technical personnel.
- Demonstrated ability to work collaboratively as part of a team, and independently with minimal supervision.
- Commitment to comply with relevant confidentiality and privacy guidelines.

Interested?

Interested candidates should access the application form and a comprehensive position description from www.cancerinstitute.org.au

The Cancer Institute NSW is Australia's first statewide cancer control agency, dedicated to lessening the impact of cancer through prevention, early detection, treatment, services, information and research.

of Medical Research

AMSI Vacation Schools and Scholarships 2013-14

Our young stars

Winter School

John Snadden

PhD Candidate

Australian National University

Being able to analyse and predict the behaviour of a geothermal source over time is one of the most critical components to generating geothermal power. And with the growing push for sustainable energy sources, simulations and models are downright indispensable.

John Snadden has been able to develop simulations of how water and heat flow in geothermal reservoirs.

"In the last few decades, the computational resources available to theoretical science have increased dramatically. Unfortunately only a handful of people have the technical expertise in software development and geomechanics, so developing computer models has enabled researchers to perform calculations with far higher precision and efficiency: opening up new areas of inquiry."

"Maths can model just about anything. 2013 was the International Year of the Mathematics of Planet Earth and I feel privileged to present my progress modelling cleaner energy sources," John said.

Sharing insights and knowledge between disciplines increases the chance of solving pressing matters. Collaborations between scientists and mathematicians are vital to this process; as are young students with the drive to create multi-disciplinary collaborative ventures.

"Talking about ideas spreads them and helps them to grow. AMSI events bring like-minded people together, which has a knock on effect for future collaborations."

Summer School

Kate Atwell

Bachelor of Mathematical Sciences
University of Adelaide

We all know how to queue. Lining up for our morning coffee; pressing our touchscreen umpteen times before speaking to a human; queues can be plain and simple, or utterly complex. What we may not know is that a whole branch of mathematics is devoted to studying the intricate nature of waiting.

Kate Atwell does. She recently embarked on an honours project that looks at complicated queues – like calling the bank.

"First an automated voice asks you to press a number, then you may have to give several other responses before finally getting to someone from the bank. My research looks at how you move forward through these options — one phase at a time — until you reach the end of the queue: the real person!" Kate said.

Kate accuses a high school teacher for her love affair with maths. "This teacher had a mathematics degree; and a passion for mathematics that was inspiring, motivating and contagious," she said.

So the next time you're in a queue spare a thought for Kate and the high-end mathematics she uses to calculate how you wait, and where your choices take you.

"The best thing about AMSI's Summer School was being able study a course not offered at my university. It opened my eyes to fascinating fields of mathematical research."

Vacation Research Scholarship

Anthony Clissold

Bachelor of Science (Mathematics)
Flinders University

From fantasy sport to making our emergency departments run more efficiently, Anthony Clissold knows first hand the importance of mathematics and statistics.

Anthony took a "Career-Chooser" survey when he was in Year 10; his two most compatible suitors: statisticians or actuaries. These results coupled with enthusiastic passionate mathematics teachers made his pathway to mathematics obvious.

Anthony enjoys the maths and stats that are hidden in nearly every facet of modern existence – especially those in fantasy sports. "I love the idea of setting up teams under mathematical constraints, then buying or selling players depending on their real world performance to turn a profit," he said.

Throughout the last year of his undergraduate degree Anthony worked as a research assistant. He developed a computerised decision support tool to aide situations where outcomes are partly random and partly under the control of a decision maker primarily to optimise patient flow in emergency departments.

Anthony said, "the nerdy explanation: I use dynamic programming approaches to find optimal solutions to Markov Decision Processes. It is much easier to tell people: 'I get paid to make graphs!'

"I want to be able to get up, go to work and help somebody with what I do," Anthony said. "Mathematics allows me to do that, secretly, behind the scenes."

"AMSI programs help secure Australia's reputation at the forefront of scientific research. They allow budding mathematicians to delve deeper into research and get a taste for what's to come outside of academia."

BioInfoSummer

Shila Ghazanfar

Bachelor of Science (Advanced Mathematics)
University of Sydney

A love for numbers has seen Shila Ghazanfar journey across Australia's vast landscape to explore the minute workings of the human body.

Born to immigrant Afghani parents, Shila has become the first in her family to complete a university degree. In high school she enjoyed both chemistry and mathematics, but it was at university that she discovered her love of statistics.

"I told Dr Jean Yang — one of my lecturers — that I wanted to work with lots of data and she told me she had more data than you could poke a stick at. So I grabbed the proverbial stick and began my research in statistical bioinformatics."

Shila said that the most valuable aspect of AMSI's BioInfoSummer was making lasting connections with other postgraduate students and researchers.

Even though her studies are exceptionally challenging Shila enjoys her research. "I've learnt a great deal and formed many friendships and collaborations," she said.

Shila's passion for numbers has transformed her into a detective: to derive, uncover and extract meaning from data. The data Shila extracts meaning from, using statistics and mathematics, assists our search for effective cancer treatments.

"Collaborations across disciplines is where the potential to solve some of the world's biggest — and, in my case smallest, — problems lies."

Statistical Performance Analyst

- Challenging role within an exciting environment
- Great development opportunities
- Workers' Compensation General Insurance Focus

Allianz is one of the world's largest and most renowned integrated financial services providers. In Australia, Allianz is one of the leading general insurers with more than 3,500 employees and 2 million customers nationally.

An opportunity currently exists for an analyst to join our performance analysis team. In this role you will use your analytical skills and enquiring mind to deliver reporting that assists the strategic direction of the Workers' Compensation division. As part of a small, collaborative team, you will use mathematical, statistical, probabilistic and econometric models to conduct in-depth analysis identifying and interpretation of trends within data and the communication of this information to a variety of stakeholders at all levels within the organisation.

The successful applicant will be responsible for:

- Assisting in organisational activities aimed at the automation of reporting.
- Analysing large quantities of complex, raw data to make insightful analysis and insights around profitability, claimant behaviours and trends.
- Undertake statistical analysis to assist in understanding performance drivers.
- Work collaboratively with stakeholders and provide analytical support for planning projects within the Workers Compensation Division.
- Design new analysis approaches to address emerging questions.

The successful applicant will have:

- Some experience in data analysis and the preparation of data reports.
- Tertiary qualifications in mathematics, statistics, economics, science or related field.
- Demonstrated capability to work with large data files and complex analysis is advantageous.
- Strong written and verbal communication skills, with the ability to communicate findings to a variety of stakeholders.
- Proven ability to write data manipulation code (SAS and VBA desirable).
- A demonstrated attention to detail and a well-developed habit of self-checking the results of analysis as it progresses.
- Strong analytical skills and the ability to research the drivers behind the results.
- The ability to ask pertinent questions and a desire to develop a deep understanding of the information being generated.
- A high level of personal motivation and drive to achieve performance.

At Allianz we value high performance. We recognise the contribution of our employees and reward our staff with a dedicated range of attractive benefits. Whether you are looking for a company that offers a variety of flexible leave options, salary packaging or substantial insurance discounts, Allianz has a range of benefits to suit you.

If your skills and experience match the above mentioned criteria, please apply online with an up to date CV today.

Challenge | Team | Career | Grow with us

Voted Large General Insurance Company of the Year at the 2012 Australia Insurance Industry Awards.

Allianz

Graduate Actuarial Analyst

The Role

- One of the fastest growing general insurers in Australia
- Industry leading rating & underwriting systems
- A company built on excellence, first class customer service and a burning desire to be the insurer of choice in the markets we serve
- End to end business involvement in an Actuarial Department that utilises rich data and Industry leading techniques

No other actuarial employer in Australia offers the same end-to-end exposure to insurance operations. You will see the work you do directly adds value in the business with a focus on quick turnaround of quality results. You can expect to be dealing with people from right across the organisation from the CEO to Call Centre Advisors.

About us:

Youi was founded by actuaries and bases its operations on actuarial principles. From reinsurance and capital, through reserving and claims analysis, pricing and product development, to operational analysis and modelling, the actuarial department is central to Youi's operations.

The actuarial department has wide and deep industry experience, with team members involved closely in industry debates around matters such as flood insurance, disaster management and capital requirements. The team has considerable experience implementing cutting edge techniques relating to modelling and data management.

As well as our customers, Youi has a keen interest in developing its staff. Combined with a generous actuarial study allowance and internal leadership development programs, the YourLife program provides numerous staff benefits and support.

Based on Queensland's beautiful Sunshine Coast, enjoy working close to the beach in state-of-the-art facilities.

About You:

A recent graduate (graduating by January 2015) in Maths, Statistics, Actuarial or related studies with excellent academic results.

- Have an entrepreneurial bent and a keen eye to identify opportunities for continuous improvement and enhancements of all aspects of the business.
- Revel in the opportunity to implement improvements in the industry-leading systems based on your ideas and analysis.
- An outgoing and approachable persona and a committed team player.
- A desire to develop a well-rounded actuarial career in personal lines insurance.
- Permanent resident of Australia

But note; if you want to be pigeon-holed doing the same thing all the time, Youi is NOT the company for you! This is a rare opportunity for the right candidate to become involved in a vast range of tasks not typically allocated to a graduate.

Please apply by sending your resume & academic transcript (PDF format) with a cover letter titled – Graduate Actuarial Analyst to the Youi Careers Website.

How do I register my interest?

youi.com.au/careers

Insurance

Calculating the risks.

How do companies determine insurance rates? Insurance actuaries, that's how! Progressive insurance related jobs can make rewarding careers. Insurance and actuary professionals are specialists who deal with the financial impact of risk. Mathematicians and statisticians are perfect candidates for these roles conducting analyses using probability and statistics to determine insurance rates such as for cars, homes, health and a number of other areas.

Post Graduate Internships

Enhance your career prospects

Partner Advertisement

Greener routes drive profits

Intern: Yi Chen, Federation University

Industry Partner: Marcus Denny, Manager, Systems Design Division, VISA Global Logistics

Academic mentor: Prof. David Y. Gao, Federation University

The Travelling Salesman Problem is the classic example of a difficult optimisation problem. VISA Global – one of Australia's largest privately owned global freight-forwarding companies – was faced with such a problem. With their online sales soaring, the logistics company needed to find more efficient ways to deliver goods to reduce costs and their carbon footprint.

VISA Global engaged AMSI intern Yi Chen, a PhD student at Federation University, to look for innovative approaches to improving the efficiency of their transport fleet. According to Marcus Denny at VISA Global: "The results of Yi's work were very impressive and provided VISA with a verifiable approach to solving the problem, with potential gains far in advance of what had been hoped at the outset."

Actuarial Analyst

- Exciting Opportunity close to public transport
- Competitive Salary + Bonus + Benefits
- Career Growth and Development

The Company

My client is a Leading Insurance provider currently seeking Actuarial Analysts due to Company expansion. This is your opportunity to join a dynamic and growing team where you can expand your knowledge and grow your career

The Opportunity

This role will see you work in the General Insurance team providing accurate advice to allow growth and profitability for the company. There are a number of opportunities available for both senior and junior level actuarial analysts looking to both expand their knowledge and encourage and support junior staff as they grow their career.

Duties include but are not limited to:

- Conduct pricing reviews, utilising a range of modelling, data mining and optimisation techniques
- Utilise research and analysis to improve natural hazard pricing (flood, bushfire, cyclone etc.)
- Build monitoring processes to assess performance of pricing recommendations

Your Details:

These opportunities are ideal for professional yet highly enthusiastic Actuarial Analysts who are driven, motivated and dynamic, who really want to further grow and build on their already sound skills and experience. To be considered you will possess the following:

- 1-5 years of actuarial or general insurance industry experience
- Graduate degree - preferably in actuarial studies or statistics
- Understanding of business processes and data, systems and analytical methods
- Ability to work autonomously in a busy commercial environment with outstanding time management and organisational skills

Specialist Financial Recruitment

Marketing Data Analyst - Data Scientist

The Client

Our client is one of the world's largest media agencies. Their success stems from a culture of curiosity and questioning and providing second to none mentoring and employee engagement.

The Benefits

- Work closely with internal and external clients
- Exciting international projects
- Career progression

The Role

You will be the backbone of this team. You will be responsible for the collection, management, analysis and visualisation of data from a wide variety of sources spanning multiple marketing disciplines including on and offline media and market research.

You will turn data into insights and then present via dashboards in a language that all stakeholders can understand.

This is a challenging role which will require you to manage multiple projects at any one time. You will be responsible for ensuring project outputs are delivered to client expectations whilst coming in on time and within budget.

The Requirements

- A minimum of 1 year commercial research experience in a market research, media or advertising agency
- Demonstrated market research project management skills
- Strong quantitative analysis skills; 'Hands On' approach to data handling
- Well developed report writing skills – an ability to turn raw data into actionable insights
- Exceptional communication skills; written & oral
- Knowledge of a variety of research methodologies and proven ability in the application of these in a commercial setting
- Competency using SPSS or Q and Excel for data manipulation
- Proficiency in MS Office (Excel, Word & PowerPoint)
- Proven ability to interpret data and derive actionable insights

In addition to the above, you should:

- Have relevant tertiary qualifications (Statistics, Mathematics, Econometrics)

Market Research

Another satisfied customer!

How do companies keep their customers satisfied? How do they know when they are about to lose your business and then entice you all over again? A crystal ball? No, market researchers that's how! Market researchers interpret customer records and spending habits in an effort to provide their company with an edge over the competition. Maths and stats grads are trained to be numerically savvy and highly suited to interpreting data.

- Knowledge of a variety of research methodologies and proven ability in the application of these in a commercial setting
- Competency using SPSS or Q and Excel for data manipulation
- Proficiency in MS Office (Excel, Word & PowerPoint)
- Proven ability to interpret data and derive actionable insights

In addition to the above, you should:

- Have relevant tertiary qualifications (Statistics, Mathematics, Econometrics)
- Be confident & self motivated
- Be highly analytical
- Be client focused
- Be a team player
- Have outstanding interpersonal skills
- Have an eye for detail
- Have exceptional organisational and planning skills
- VBA or SAS experience is desirable

Advertising Analyst | Media | Sydney

- Multiple roles
- junior level position
- Chance to develop a media Research Career

The Firm

Its all about innovation and insight, within a fast changing and dynamic environment. This Advertising and media leader offers a fun environment to face your daily challenge and sufficient challenge to engage your brain - both your logical and creative side.

The Job

This junior level position will see you working with a range of research tools and software to respond to research and analysis requests from the business.

Its a 360 degree role - which will see you brainstorming research ideas, taking down briefs - preparing an analysis plan and presenting your finding sback to the business.

Its a team role - within an awesome growing team with a positive culture.

The Person

You will be a smart, highly numerate person that is fun to work with and has exceptional communication skills.

You will have a strong interest in Media/marketing/advertising and get a kick out of analysis.

You should have some kind of background in Research driven insight - ideally in Media.

You need to be a switched on, intelligent person with great common sense that understands what makes other people tick, or at least wants to find out.

Hungry for insight, fun to work with, snappy dresser, good at maths, likes to party, but not too much?

This could be the start of something awesome

LA TROBE
UNIVERSITY

MAKE YOUR STUDY COUNT

Bachelor of Science Major in Mathematics and Statistics

Mathematics and Statistics at La Trobe University has a long and proud tradition of providing excellent teaching with world-leading research.

A qualification in mathematics and statistics prepares students for a wide range of careers.

Visit our website and find out more.

latrobe.edu.au/mathstats

STUDENT SATISFACTION

La Trobe has a history of recognised teaching excellence in mathematics and statistics.

Results of Australia-wide student satisfaction surveys from the MyUniversity website show La Trobe received remarkable scores of 95% in overall satisfaction and 95% on the good teaching scale.*

*Results of student satisfaction surveys current at June 2012, available from MyUniversity.gov.au

TOP GRADUATES

La Trobe has a proud record of encouraging women students in mathematics and statistics. La Trobe has a high level of female participation by Australian standards, and women have figured prominently in winning Honours prizes and PhD scholarships.

WORLD-LEADING RESEARCH

La Trobe has a team of world quality researchers, including two ARC Future Fellows and one ARC Dora Professorship, supported by a number of large research grants.

ACCREDITED PROGRAM

La Trobe was the first University in Australia to have its statistics program accredited by the Statistical Society of Australia Inc. Students completing this program obtain Graduate Statistician status upon joining the society.

Australian Government
Bureau of Meteorology

A new *outlook* for *your career*

Graduate Meteorologist

Our Graduate Meteorology program comprises a 10 month specialised training program conducted in Melbourne.

Our meteorology training course is highly regarded and is equivalent to one academic year and is of a similar standard to the honours year of a Bachelor degree. The course has a strong emphasis on practical meteorology and covers:

- synoptic, dynamic & physical meteorology
- climatology
- oceanography
- satellite & radar data interpretation
- numerical weather prediction, and
- the use of modern technology.

At the end of your training, you will be awarded the nationally accredited Graduate Diploma in Meteorology and after training, transfer to one of our Forecasting Centres located in capital cities across Australia to work as a weather forecaster in a forecast team.

You could even end up specialising in some fascinating fields such as severe weather, tropical meteorology, thunderstorms, aviation and climatology to name a few.

Look forward to a salary of \$53,372 whilst training, an advance in salary when you successfully complete your training, and comprehensive relocation assistance if you need to relocate for training or to transfer to your posting location.

We offer competitive working conditions, support and a great team people who love what they do.

Don't miss this chance to join the Bureau and make the most of your career.

Successful applicants will need to be available to commence the Graduate Meteorology program in Melbourne in January 2015.

What we offer:

- 10 month accredited graduate diploma in meteorology
- Dynamic and challenging learning environment
- Use of advanced technologies and innovative techniques in weather forecasting
- Clear career pathway with excellent promotional opportunities
- National network of offices and relocation opportunities
- Competitive salaries and conditions of employment
- A generous employer contributed superannuation scheme
- Relocation benefits and assistance for interstate applicants
- Salary advancement upon completion of training

What we are looking for:

- Graduates with relevant tertiary studies in atmospheric science, physical science or mathematics
- Motivated individuals with a passion for meteorology
- Flexible attitude, a willingness to relocate and undertake shift work
- Australian citizenship or permanent residency

www.bom.gov.au/careers

Meteorology

Does it look like rain?

As everyone knows, the weather is hard to predict! The modelling of ocean currents, weather patterns and climate change is all about mathematics; it is important to a range of industries—from fishing, shipping and farming to air traffic control. It even affects the everyday person day to day in deciding what to wear!

maths:

make your career count

mathscareers.org.au

My speciality is severe weather forecasting. I forecast the weather for the Emergency Services and produce warnings for critical fire weather days or severe thunderstorms. Weather is ever changing which makes it interesting to watch. It is challenging, particularly at the extreme ends of the scale, so my job is rarely boring. I have to get it right as my decisions affect a lot of people.

Meteorologist

Claire Yeo

Bureau of Meteorology

Consultant: Simulation Modelling | Operations Research

Do you love the challenge of unravelling complex data and using quantitative analysis techniques to drive business decisions?

TSG is a pioneer and world leader in the detailed analysis, simulation and optimisation of complex supply chains. Founded in 1999, we have played a part in the success of the world's largest mining operations and have the most experienced practitioners in the field.

At TSG we aim to help our clients make better decisions in industries and operations where managing business variability and dynamics is a core issue. We do this through the use of our rigorous methodology, extensive project experience and team-based engagement model.

Due to our continued success exciting opportunities exist for driven and high achieving Consultants in our Perth office. You will be working with a supportive and experienced team of consulting professionals who share a high level of passion, curiosity and integrity.

The opportunity:

- Development of dynamic simulation models and solutions using a variety of analysis tools and modelling platforms.
- The application of Operations Research techniques in the mining, logistics and transportation sectors.
- A project-based work environment striving to deliver solutions above and beyond our clients' expectations.

About you:

- A passionate problem solver.
- Thrive in a team based environment.
- Excellent communication skills.

Operations Research

What is it?

Operations research is all about the optimisation of scheduling, manufacturing, pricing and so on. It is a critical part of business and government planning.

...operations using a variety of analysis tools and modelling platforms. ... Research techniques in the mining, logistics and transportation sectors. ... project-based work environment striving to deliver solutions above and beyond our clients' expectations.

About you:

- A passionate problem solver.
- Thrive in a team based environment.
- Excellent communication skills.
- Ability to deliver to client deadlines and work under pressure.
- Sound programming capability. Object-oriented languages are preferred.
- Understanding of dynamic simulation modelling or other Operations Research techniques. Experience in simulation and optimisation packages will be looked upon favourably.
- Tertiary qualifications in Engineering, Mathematics/Statistics, Science, Computer Science or Operations Research with excellent academic results. Postgraduate qualifications will be looked upon favourably.

TSG provides:

- An inspiring work environment focused on teamwork and delivery.
- Opportunity to work on industry leading and rewarding projects.
- A supportive learning culture, career progression and mentoring opportunities.
- Competitive remuneration including bonuses.

A competitive team aiming to be number one

On-the-job development opportunities

Tibra Capital is a global Financial Services Company with operations in London, Sydney, Wollongong, Hong Kong and Chicago. Our success is based on creating and leveraging market leading trading, risk management and technology opportunities. We employ the very best people across all our business units and provide them with the right tools and support to do a great job. The end result of this for Tibra is a competitive team aiming to be number one in each market in which we operate.

As part of joining a leading trading firm you'll get exposure to real world quantitative finance methods. Via on-the-job and structured learning and development opportunities, you'll also gain exposure to skills and experience which will be held in very high regard in the marketplace.

Advanced numerical & problem-solving skills

To join Tibra Global Services, you must be highly intelligent with advanced numerical and problem-solving skills, an ability to think quickly and the ambition to become a great team player through disciplined and focused self-development.

We offer fantastic company initiatives such as;

- Dynamic, yet relaxed and balanced environment
- Daily breakfast and lunch provided
- Company outings
- The opportunity to grow with in house Learning and Development Opportunities
- Flexible working hours
- Sydney and Austinmer offices to work out of

For more information about Tibra Global Services and any employment opportunities please visit www.tibra.com

ARC CENTRE OF EXCELLENCE FOR CLIMATE SYSTEM SCIENCE

Climate Science needs you.

If you have a quantitative background then our Centre of Excellence wants you. Your training in mathematics, statistics, physics, hydrology, oceanography, meteorology or engineering could be key to shaping the future of climate science.

The Australian Research Council Centre of Excellence for Climate System Science is looking for graduate or honours students who want to do research with world-leading climate scientists across five top universities and a suite of outstanding national and international partner organisations, including CSIRO and the Bureau of Meteorology.

Many projects are supervised across universities and by experts from one of our partner organisations.

Generous travel support exists for students to visit our national and international partners.

Outstanding students may receive top-up funding above the rates of Australian government scholarships. Scholarships are also available for honours and exceptional international students.

Embark on an adventure with FedUni and decode the world with mathematics

FedUni offers a range of programs that allow you to factor in your mathematical ambitions:

- Bachelor of Mathematical Sciences
- Bachelor of Engineering
- Bachelor of Information Technology
- Bachelor of Science

You can count on a career in Mathematical Sciences!

The applied focus of FedUni's mathematical science programs ensures you will be ready for a career in this varied field. While there are the obvious choices of a role in banking, as a stock broker or financial advisor - **did you know** that you may also have a career as a medical statistician and help discover cures for some of the biggest health issues of our time? Or if protecting our national security gets you interested, how about a career as a defence force or internet security analyst?

Mathematical science qualifications are highly sought after in a large range of industries.

Our programs will provide you with a strong foundation in the basic principles and techniques of mathematics, as well as an understanding of how mathematics is applied in the real world.

Find out more at:

www.federation.edu.au/maths

Psychology

Analyse this!

Psychologists observe, evaluate and study behaviours, social interactions and cognitive processes. To make sense of their recorded data and observations, psychologists use mathematics and statistics to interpret and describe their findings.

Behavioural Scientist

Well-respected Australian leader in research & consulting
Generous employee benefits including monthly RDOs!
Initial 12 month contract

This position is initially a 12-month contract, with the possibility that a permanent position may become available in future.

About the company

ARRB Group Ltd, established in 1960, is Australia's leading national provider of value-added research, consulting, equipment and technical services addressing transport and road safety related issues. We are a diverse organisation with commercial and governmental customers in domestic and international markets.

About the role

We need to recruit a passionate, creative and intelligent **Behavioural Scientist** to join the **Safe Systems team** within our **Research and Consulting Division**. Sound like you?

You will be primarily working to support ARRB's domestic business in road safety research and consulting, undertaking projects focused on road user behaviour and the safety of road infrastructure.

Duties & responsibilities

- Manage and contribute to research, consultancy and development projects.
- Perform field work and travel domestically when the need arises.
- Ensure your contributions to projects meet agreed requirements for quality, budget and timeliness.
- Communicate effectively by speaking and writing, including the preparation of reports, bids and proposals.

Skills & experience

- Psychology/social science degree (honours preferred) or other relevant degree with a strong quantitative emphasis
- Sound written and oral communication skills
- Familiarity with SPSS or an equivalent statistical package
- Good computer skills with MS Access, Excel or equivalent packages
- Familiarity with other relevant software such as Visual Basic, GLIM, ArcView or MapInfo would be an advantage
- The ability to work independently
- Problem solving capabilities
- Be highly organised with good project management skills
- Driver's licence
- Prior experience in a research or consulting environment would be an advantage.

...consultancy and

Statistics

You are in demand!

Statisticians are very much in demand. There are jobs already listed in just about every category of this booklet. Here are yet more examples.

nielsen

What do *creativity* and *opportunity* have in common?

Nielsen knows.

Statistician

- Looking for a dynamic career with a company that encourages and rewards creativity and fresh thinking?
- Do you love turning the complex into something simple and easy to understand?
- Do you want to take on a new challenge in a global organisation?

If you answered yes to these, then we have the role for you...

We currently have a full-time vacancy for a **Statistician** within our **Statistics** department at Nielsen Television Audience Measurement, the TV ratings company. We are the official source of television audience measurement for the free to air networks and subscription television channels in Australia.

The role of **Statistician** supports the delivery of the Establishment Survey (ES) through all stages of the process covering questionnaire design, sampling, tracking CATI fieldwork performance results, weighting, and tabulating/reporting trends.

The successful candidate will be expected to:

- Maintain all supporting databases relating to sampling frames and geographic boundaries (such as ABS, Australia Post)
- Coordinate and administer questionnaire design activities
- Track weekly performance results
- Prepare interim and final tabulations and reports, including population projection/weighting
- Support internal panel management initiatives
- Maintain process documentation
- Lend support and backup to the **Statistics** team members on daily tasks as well as service enhancements and improvements

The competencies and experience required for the position are as follows:

- Advanced **knowledge of Microsoft Office Suite**, especially Excel
- Fluent in **statistical techniques such as sampling and weighting**, preferably with a **tertiary degree in Statistics**
- Sound working knowledge of SAS programming
- An ability to work to tight deadlines
- Multi-tasking skills and dealing/communicating with different departments
- An ability to learn quickly

If you wish to apply, please forward CV and accompanying cover letter by clicking 'Apply Now'
