## ELECTRIC DRIVE HOT WASH & STEAM CLEANERS BUILT TO ENDURE AUSTRALIAN CONDITIONS

6

High pressure steam cleaners not only clean effectively, but steam kills micro-organisms within seconds without the use of chemical disinfectants.

Aussie Pumps has developed a range of hot wash & steam cleaners **specifically for Australian conditions**.

These machines are designed particularly with primary producers and earthmoving contractors in mind. A step up from European models, they feature triplex pumps, **4 pole motors**, steel chassis with 4 wheels, stainless steel covers and are made to last.

Cleaning with hot water is faster, uses less chemicals & offers a more hygienic result than using cold water.

NEW HYDRO-HUSH LOOP  
Clean while the city sleeps

EPA COMPLIANT  
CLEAN & CAPTURE SYSTEM

## HYDRO-LOOP...IT'S CLEAN & GREEN

The **Hydro-Loop system** means fast, efficient cleaning, with a unique 'Clean and Capture' system. You can comply with EPA regulations.

That's right...the site is not contaminated, but left in pristine condition! This is not just a machine ... it's a business opportunity without the ties of a franchise.

You have the support of **Aussie's** marketing machine and the freedom to build your business, your way.

You set your own price, work your own hours and keep all your profits.

Successful **Aussie Hydro-Loop Club** members are motivated, and have the drive to generate work from car parks, shopping centres, service stations and property managers.

### What is the Aussie Hydro-Loop?

It's a self contained, trailer mounted, hot-water pressure washer with built in recovery unit, filters and tank. These units combine the cleaning power of high pressure and steam with a vacuum filtration system that collects the waste water, preventing it from entering storm drains.

The wastewater is collected via either the **Hydro Twister** flat surface cleaner or a Scupper placed at a dammed drain point. The water is then filtered through 5 stages and returned to the supply tank for reuse.

System features ....

- ◆ **Aussie Hydrotek** engine drive industrial steam cleaner
- ◆ **Vacuum filtration system** with two stage motor, and two replaceable cartridge filters
- ◆ **1,000 litre poly impact resistant water tank** (750 litres on Junior)

**Change your nozzle regularly;** nozzles wear with use and can cause your pump and system to fail.

Correct nozzle sizing is essential for your machine's correct performance.

### How to Read the Chart

1. Main chart area is flow in litres per minute.
2. Look up the pump psi in the heading and read down that column to the approximate flow. Read off the MEG size in the row heading.
3. Drop one size because calculation should always be made using 93% of pump flow.

##### Comfort, Function and Safety - Pro Operator

Dyneema® is the world's strongest fibre.

(15 times stronger than steel on a weight for weight basis). This makes it possible to offer high levels of protection against water jetting hazards even with lightweight fabric. Being much thinner and more flexible than traditional materials, such as leather, cotton and metals, products made with Dyneema® fibre will be very comfortable. Employees will appreciate this comfort, combined with higher protection, and consequently are more likely to wear them at all times.

Dyneema® is a registered trademark of Royal DSM N.V

### SAFE OPERATOR TRAINING

**New Australian Standards** on the use of high pressure water jetting systems (AS:NZS4233.1-2013) states that operators of Class A pressure cleaners, typically to 4,000 psi, must be trained in identifying risk and the safe use of the equipment.

For Class B machines, 5,000 psi and above, or high flow blasters, operators must undergo formal training in high pressure jetting and be certified.

Aussie Pumps run safety training courses with a huge emphasis on safety awareness. The training program details, in a very down to earth way, the value of using indispensable labour saving equipment, without running the risk of disablement or injury.

Call Aussie Pumps for more details of the **FREE** courses.

### STAY COOL ... REDUCE THE RISK OF HEAT STRESS

#### DURATION?

Lasts for 90 minutes in a 60°C/140°F environment, or 4 hours at 45°C/113°F normal work.

#### RE-CHARGE?

Re-charges in 4 hours in room temperature (20°C/68°F), or 10-15 mins in a fridge.

#### WHAT ABOUT THE ELEMENTS?

Consist of a non toxic, non flammable blend of salts which is known to be the most effective ingredients for this temperature range. Can be used and re-charged over and over again. Guaranteed for 1000 cycles, if properly maintained. TEMPTECH elements within the vest can be replaced if damaged.

#### MULTI

Cooling Vest Multi has 20 TEMPTECH elements that provide effective heat absorption. Also available in flame retardant material if required.

Recommended to use tight to the body, with a T-shirt underneath, and a covering garment on top.

#### HOW IT WORKS

Through our unique concept - using TEMPTECH elements with a 28°C transition temperature - we utilize this fact of nature to store energy, and absorb excessive heat.

Everybody knows that ice melts at temperatures above 0°C but not everybody knows that the moment of transition from solid to liquid uses up to 50 times more energy compared to a rise of 1°C when an object already is in either liquid or solid condition.

The TEMPTECH element recharges in normal room temperature (20°) in about 4 hours - faster if in a cooler environment – and is guaranteed to last more than 1000 cycles.

## ENERGY SAVING / PUMP CORRECT USE

It is quite normal that the pump flow is oversized in comparison with the application.

Ideally, the water recirculated through the regulating valve should not exceed 10-15% of the pump flow.

If it exceeds this, besides being inefficient, the recirculating water will heat up causing stress on seals and valves, and increasing the risk of cavitation in the pump. It is therefore recommended that the pump capacity is reduced to the actual system needs by moderating the pump R.P.M.

### FAQ

**Question:** How much you must reduce the pump R.P.M. in order to get a lower capacity?

**Answer:** Required R.P.M. =  $\frac{\text{Expected capacity} \times \text{Max R.P.M. allowed}}{\text{Max allowed capacity}}$

**Question:** What diameter engine/motor pulley is required to achieve these R.P.M.?

**Answer:** External diameter of the engine/ motor pulley =  $\frac{\text{External diameter of the pumps pulley} \times \text{R.P.M. pump}}{\text{R.P.M. motor/engine}}$

**Question:** What if it is not possible to replace the engine/motor pulley?

**Answer:** External diameter of the pump pulley =  $\frac{\text{External diameter engine/motor pulley} \times \text{R.P.M engine/motor}}{\text{Pump R.P.M.}}$

**Question:** If the engine/motor is running at lower R.P.M. than the max. R.P.M indicated in the label, what is the max capacity achievable?

**Answer:** Achievable max capacity =  $\frac{\text{Engine /Motor R.P.M:} \times \text{Max capacity indicated in the label}}{\text{Max. R.P.M. indicated in the label}}$

**Question:** What is the approximate power required to achieve the max performances allowed?

**Answer:** Required power ( electric motors HP) =  $\frac{\text{Max capacity (L/min)} \times \text{Max pressure (bar)}}{385}$

Required power (petrol/diesel engines HP) = electric motors HP x 1.3

#### What is Microweb?

It's a **unique** filter media constructed from a **homopolymer acrylic fibre**. It has a microporous membrane applied to the collection surface. This provides a low pressure drop, causes the dust to 'cake', facilitates **better dust release** and **improves collection efficiency**.

**Microweb** is essential for dust from limestone, biochemical, lead, sugar, cement, Gyprock, precious metals, pigments and fertilizers.
