

## Natural Zeolite Specification Sheet

### Type FM 2.2 Minus General Characteristics

Product Form:	Red Angular Grit.
Product Size:	Nominally Minus 2.2mm
Product Particle Shape:	Cubic to Blocky.
Stability:	Excellent.
ROM Ore:	Coarse grained, altered vitric, ash-fall tuff.
Geological Age:	Carboniferous (circa 300 million years old).
Main Zeolite Minerals:	Clinoptilolite and Mordenite.
Solubility in Water:	Virtually Nil.
pH Change of Slurry:	Virtually Nil.
Bulk Density of Product:	Around 1350 kg/m <sup>3</sup> .
Particle Specific Gravity:	2300 kg/m <sup>3</sup>
Ammonia Exchange Capacity: (Test based on a single rock ground to a fine powder, not on actual finished product)	Up to 156 meq/100g Av. 146meq/100g
Standard Pack:	1 tonne Bulker Bags.
Alternate Pack:	Palleted 25Kg Bags.
