NOTE: 2-Bike Transfer with driver side disassembly shown below, disassembly is equivalent for passenger side and all Transfer series racks.

1. Rotate the rack into the trailer position as shown below.
NOTE: Ensure the pivot latch bar has fully engaged the pivot bracket before proceeding.
2. Remove the m4 bolt and m6 bolts retaining the end cap, tire cradle with puck, and hinge.
TIP: Make a note of the tire cradle position to maintain bike position after reinstalling.
3. Remove the end cap, tire cradle with puck, and hinge.
4. Remove the two m6 bolts retaining the damaged hinge puck and remove the hinge puck.
5. Install the new hinge with the provided hardware, being careful not overtighten the m6 bolts.
6. Install the remaining components in the reverse order of removal.
