The Future of Agile Teams

Innovation, Automation

Reduced workload and resource requirements
Increased scalability and speed of response
Improved objectivity and data-driven decision-making

Scrum master

- Role
- Time and resource
- Potential biases and blind spots

The Solution

Step 1: Client sends an email

Step 2: AI makes a summary, multiple options

Step 3: User chooses the best option

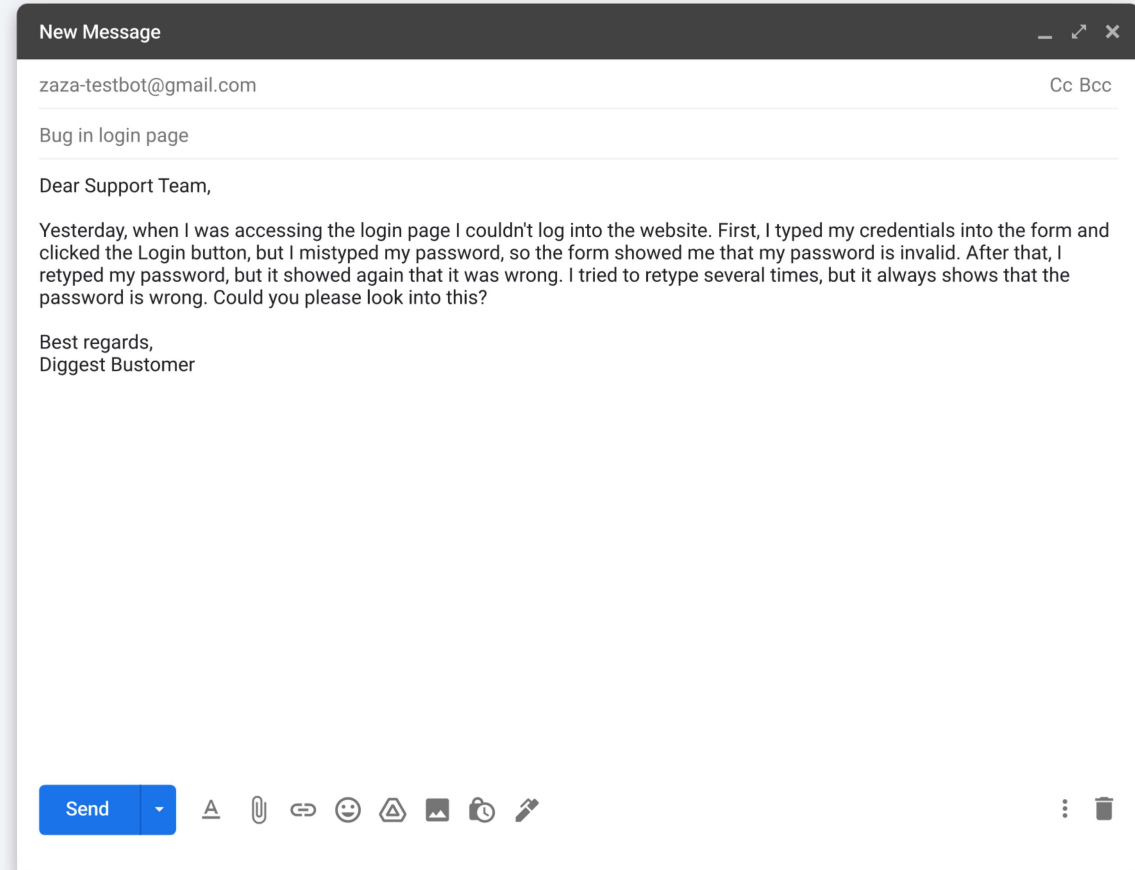

Step 4: AI creates a ticket

Step 5: Grooming

— Transmit the dilemma!

Send the Issue to the AI.

— Transmit the dilemma!

The AI will immediately sends response

— Transmit the dilemma!

Option to choose

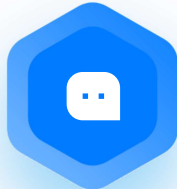

Problem

Upon identification of the issue, a ticket was instantiated inclusive of a comprehensive description, a pertinent title, an estimated timeline, and notification dispatched to the relevant team

Grooming

The subsequent action entails refining the ticket, whereby the AI shall attentively heed the developers' input and subsequently synthesize a summary. This shall be amalgamated with the extant description to create a comprehensive representation of the ticket's details.

Grooming

AI listens to developer input

Meeting discussions are summarized

New information is added

Ticket description is updated

Collaborative process improves ticket accuracy

Assign

Productivity

Capacity
