

YOUTUBE NAVIGATOR

PERSONALIZE YOUR YOUTUBE
EXPERIENCE

PROBLEM

One of the most popular resources for obtaining information is video. When the time resource for watching one or more videos is limited, the question arises, why is there no short summary of the video like in the book? Even further, when the video is suitable, why is there no ability to extract information in the form of text from several videos to further work with the document? Have you ever had such pain while working with video?

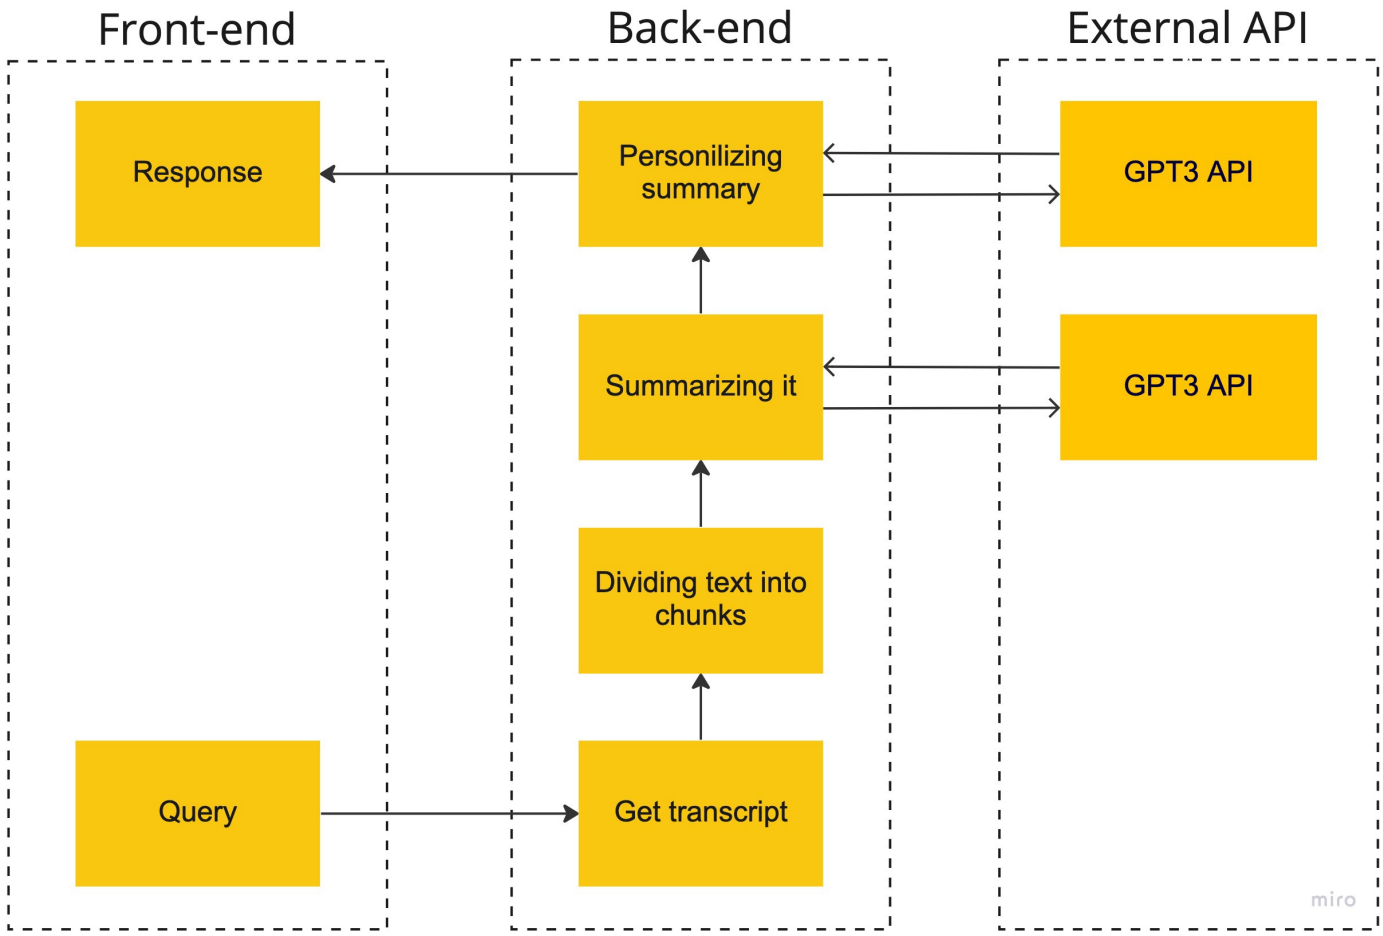

OUR SOLUTION:

YOUTUBE NAVIGATOR

- Chrome extension that provides personalised summaries for users directly on YouTube.
- Our extension has seamless integration with YouTube providing a distraction-free viewing experience
- The extension uses generative AI technologies to generate summaries customised to each user's preferences and interests.

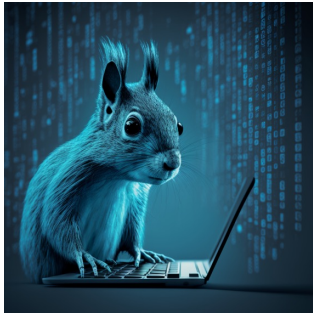

APPROACH

FUTURE WORK

- Browser extension that will be an integrated tool for watching videos on every website.
- Personalised youtube chapters, automatic detection of ads in YouTube videos, emphasising main points in videos, allowing users to skip ads if they choose.
- You will only remember the useful parts of any video on the internet. It won't take up much of your time to watch even long videos, and you will be able to consume the information only you don't know, want and only important ones.
