

Your business partner
for brands of all size!

Sure, here are five alternative one-sentence rhyming versions of your motto:

1. "For brands of any measure, aiGency's AI tools deliver."
2. "aiGency's AI tools, the secret weapon to make your brand rule."
3. "With AI on your side, aiGency's your ally for the brand ride."
4. "Brand success we guarantee, aiGency's AI tools are the key."
5. "Partner with aiGency, and let our AI tools guide you to supremacy."

"Ai is in, but average people are not good with prompt nor understand how to maximize its capability"

If I am provided with a link to a website, I can extract various information from the website's content and structure. Here's an example of how I can present this information in a table:

Category	Examples of Information
Page Titles	Home, About Us, Contact Us, Products
Meta Descriptions	Short summary of page content that appears in search engine results
Headings	H1, H2, H3, etc. used to structure page content and convey hierarchy
Internal Links	Links to other pages within the same website
External Links	Links to other websites
Image Alt Text	Descriptive text for images that appears when the image cannot be displayed
URL Structure	The structure and format of website URLs
Content Keywords	The keywords and phrases used throughout the website's content
Social Media Links	Links to the website's social media profiles
Page Speed	The time it takes for the website to load and respond to user requests
Mobile Responsiveness	Whether the website is optimized for viewing on mobile devices
Backlinks	The number and quality of other websites that link to the website
Domain Authority	A measure of the website's overall authority and credibility based on factors such as age, size, and backlinks
Traffic	The amount of traffic the website receives, often measured using tools such as Google Analytics
Content Quality	The quality, relevance, and usefulness of the website's content
Security	Whether the website is secure and uses HTTPS encryption to protect user data

Overall, analyzing a website using these factors can provide insights into its structure, content, and performance, and can help identify areas for improvement to optimize the website for search engines and users.

DALL-E 2

DALL-E 2 is an AI system that can create realistic images and art from a description in natural language.

DALL-E API now available in public beta
