

Welcome

KitCat Project Pitch

Our Concept

Speech to Text Translation

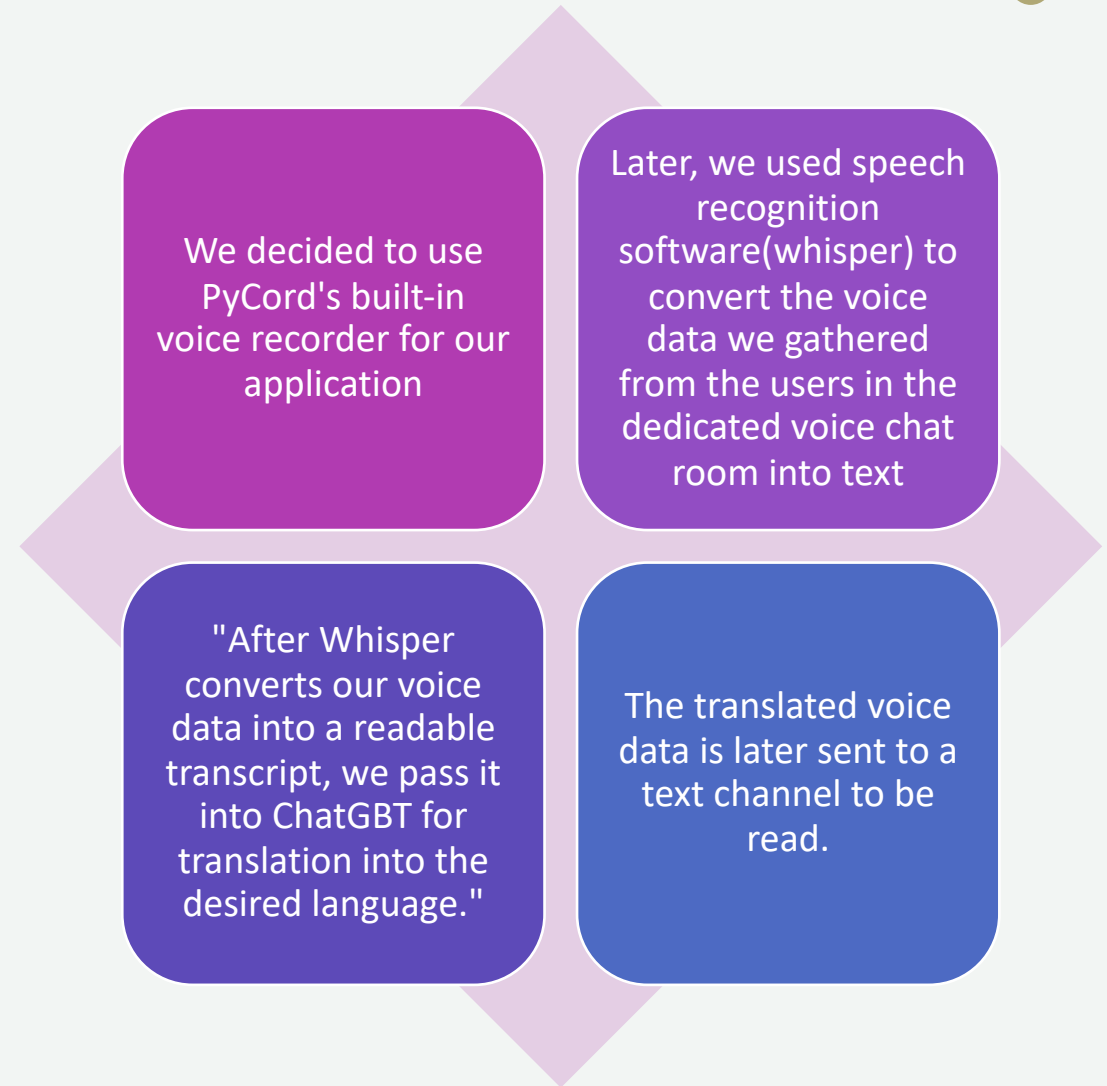

We achieved this by using Whisper to convert speech into text and later using ChatGBT to translate the gathered text data into many languages.

We decided that this concept can be amazingly useful if we can implement it on a Discord bot.

How it works

Why a Translator Discord Bot

When we pay attention to the amount of communities that are being created and growing on Discord, we realize that a translator bot that can be summoned with just a command can benefit everyone.

We also think that having a bot that can be summoned into the chat room you need it to be in within mere seconds will be a great upgrade compared to other alternatives such as Google Translate."

We also realized that the idea of a bot that can be communicated with voice commands can be further explored and can even be turned into a much larger application for Discord servers.

**Thank You For Your
Attention**
