salz21 Hackathon

The Idea

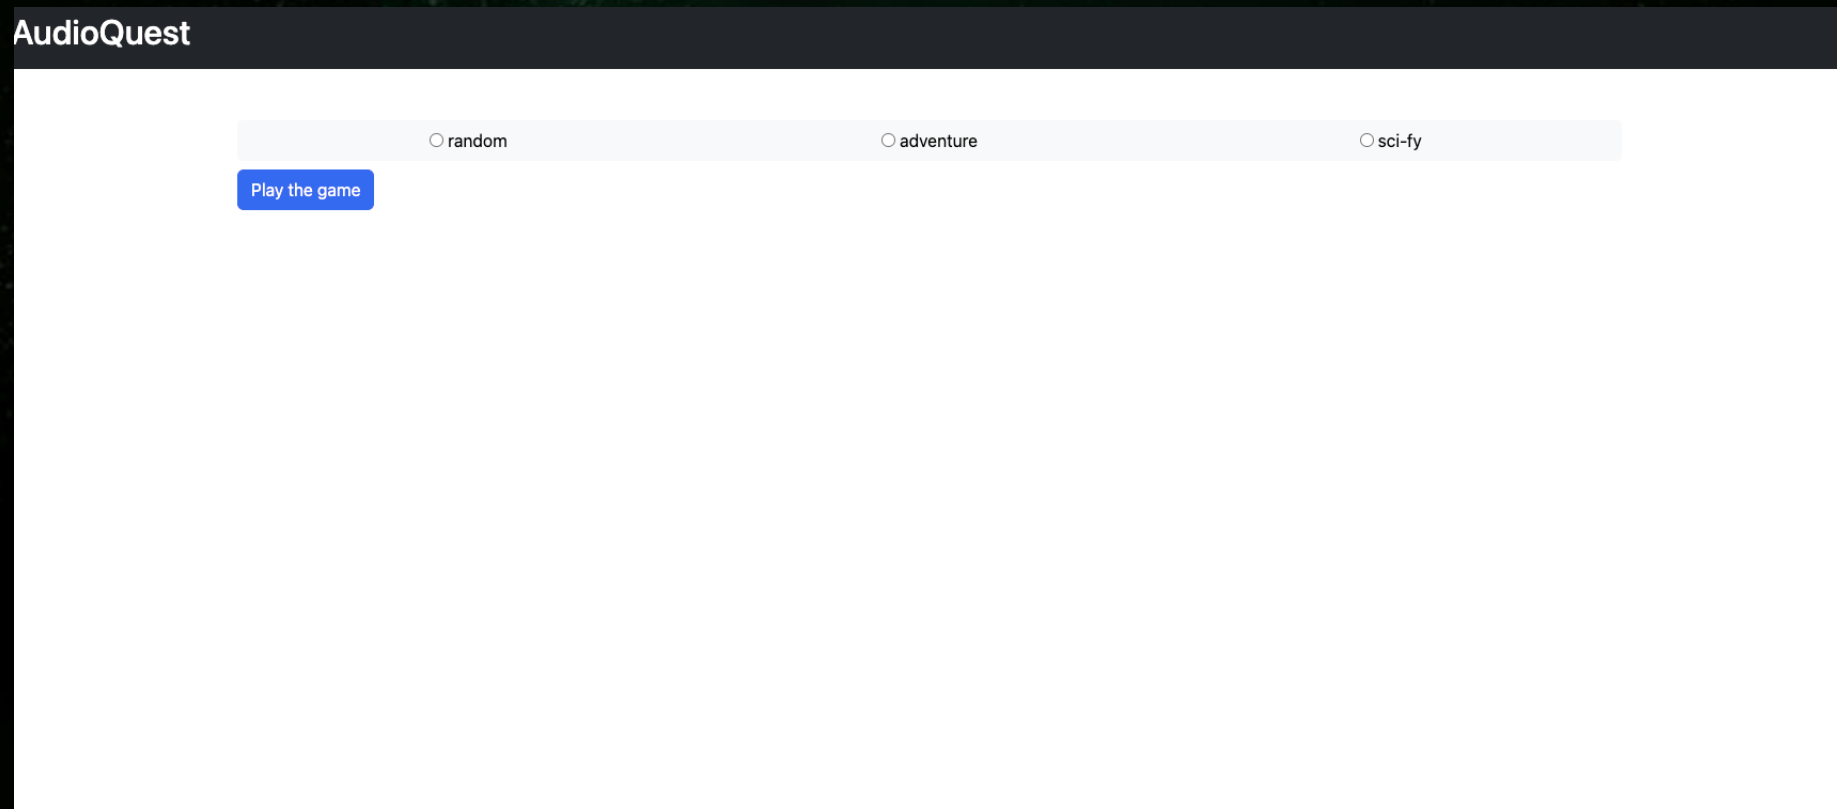

- AI Generated Text-Based Adventures (aidungeon.io)
- Voice Commanded (Alexa, Google, etc)
- Fitting Music for every Scene

Used Technology

- ChatGPT to Generate a Story
- Voice Recognition using Whisper
- Text-To-Speech using gTTS
- Fitting Music using Soundcloud API and generated music genre from chat gpt that matches the current game

The Prototype

The Prototype

AudioQuest

Story teller:

Welcome to the world of adventure! You find yourself in a dark forest. The sky is cloudy, and the air is cold. You notice a path that leads deeper into the forest. What would you like to do?

Go out of the forest!

You want to leave the forest without exploring it? Or are you just not interested in the adventure?

I'm not interested in the adventure.

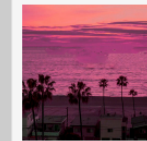

I'm sorry to hear that. If you ever change your mind, come back and we'll start again. Thank you for playing!
