

Fetcher

Your loyal work sidekick

Why?

💰 institutional knowledge buried in
company 💬 causes 😞 + 🏹.

What?

Fetcher is a   that finds relevant  and  to give you .

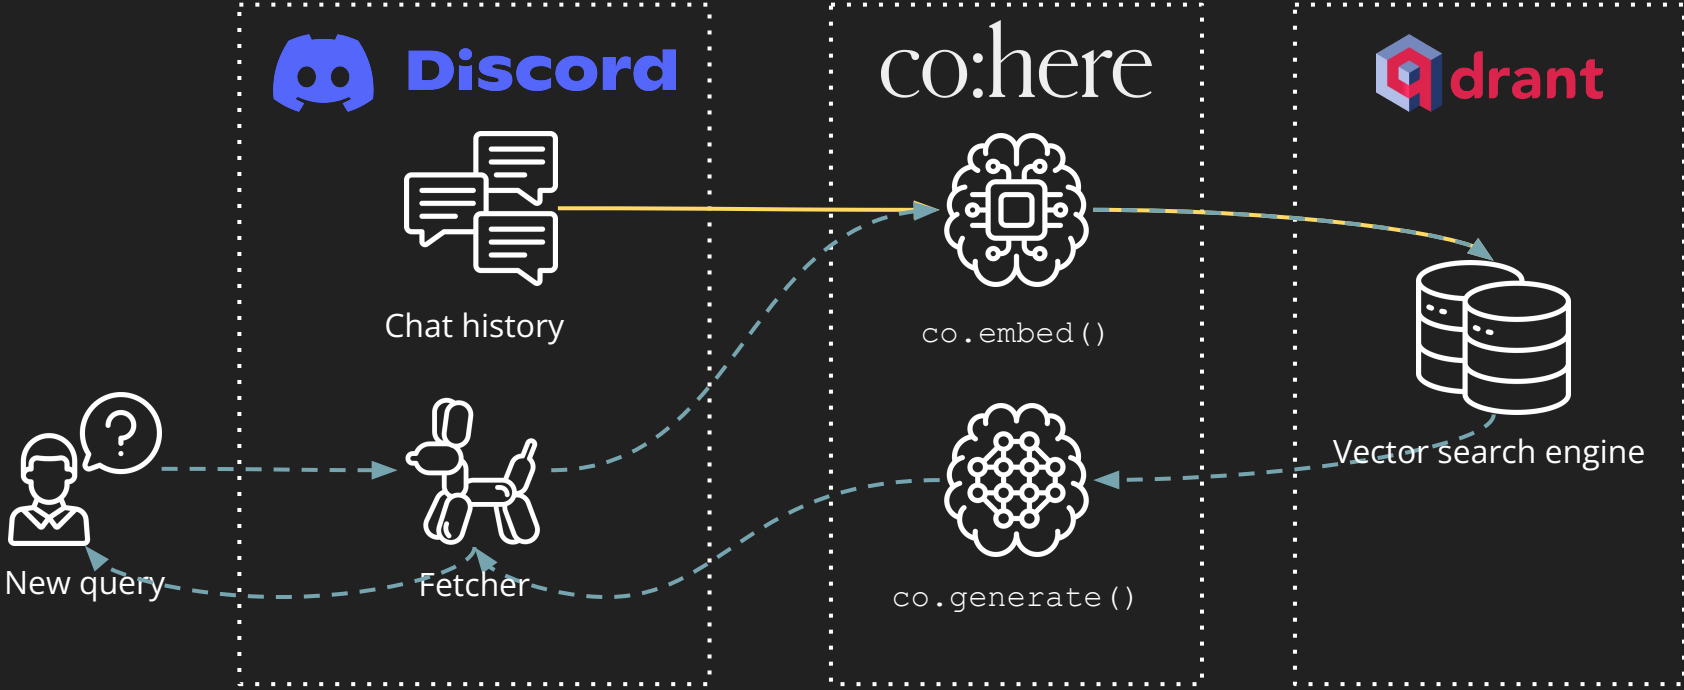

How?

Fetcher   semantically to find
 results &  actions to achieve  .

How Fetcher differs from keyword search

- Searches by *meaning*, not keywords.
- Multilingual search.
- Extensible to multimodal search.

Fetcher = LLMs + vector search engine

Business model

- Enterprise SaaS that can be integrated into other SaaS such as Confluence, Slack, Microsoft Teams, Zoom Team Chat, etc.
- Can function as an plug-in for various services, but access to companies' proprietary data will be challenging.

Jimmy Yang

Appendix

What's next for Fetcher?

- Add  and  embeddings to enable multimodal search
- Incorporate knowledge graph into the search engine to enable more information diversity

A wide-angle photograph of a golden wheat field under a clear blue sky. Numerous round hay bales are scattered across the field, some in the foreground and others in the distance. The text "How can we leverage LLM to achieve a state of 'flow' in work?" is overlaid in white, bold font in the center of the image.

How can we leverage LLM to achieve a state of "flow" in work?
