

ABOUT US

At Twitacker, we believe that the ability to quickly fact check any tweet against official sources is a superpower that can hold public figures accountable.

We enable real time fact checking on twitter.

PROBLEM

Gaslighting

In the post-truth era of fake news and personally-tailored "facts", gaslighting is also a political strategy and idiom.

It takes no time to utter falsities, but it takes time to research and "fact-check" it.

Time-savings

Majority of a journalist's time goes into research, not in actual writing of articles

SOLUTION

Simple 3 steps process

We enable quick fact Checking of any tweet by a public figure

1 – Retrieve the text from the tweet shared

You just need to tag us

2 - Use Cohere and Qdrant for similarity check

Extract the most relevant info and check for consistency

3 – Simple and easy to understand report

Shared within twitter with relevant links and feedback options

PRODUCT OVERVIEW

IMPACTFUL

The ability to fact check in real time any prominent person or news is a superpower

INTUITIVE

Anyone can use this

In DEMAND

Boardy recognized use-case.

Existing demand and non-AI tools working on it.

PRODUCT BENEFITS

BUSINESS OVERVIEW

USER VALIDATION

Google pe toh kuch hai hi nahi you have to visit multiple sites most of the first few give school level information that you can't include in a paper until you find like a relevant research paper or experiment or opinion to rely on and then confirm that from some second source and then write everything on your own which is fine if you can even find sources that are not lying

"Would love to use it."

"I would say it's a 10 on usefulness. I think just for me, it's perfect and I would love to use it to find stuff faster and more easily." ChatGPT helps way more but the challenges include:

1. It doesn't know much. Like, sure it'll tell you maybe one thing Plato proposed, pwrhaps 3 or 4 if you ask out of a 1000 things you can find if you read his work

2. It's very repititive it cant see multiple viewpoints or any new viewpoints it won't give anything new mostly just repeat an elaboration of the words you entered in the question

3. You can't do concrete research w chatGPT. It'll tell you the basics but at the end of the day, you'll still have to go find websites that go deeper into what you're researching

"This sounds great and very useful! Not just for journalists but for students and any researchers."
