## Problem

Language learning is complex; it is a skill to be honed through social interactions. Finding native speakers is complex, and finding cheap courses tends to have unfulfilling results.
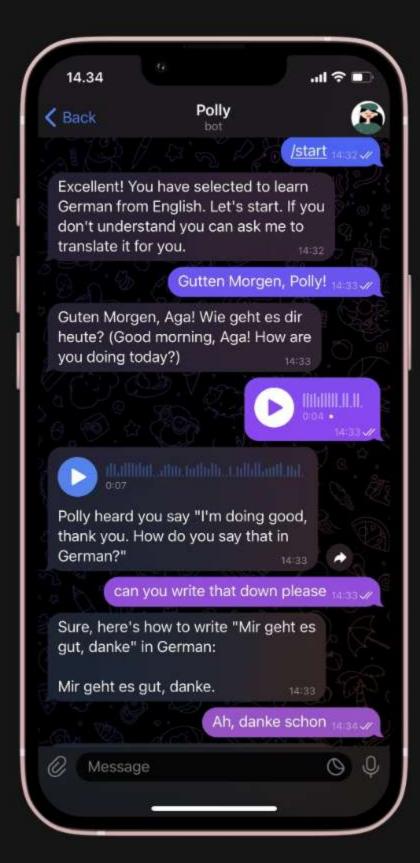

Polly is designed for amateur language speakers who intend to find brush-up courses with native speakers/speakers in general. Rather than speaking with natives, Polly is a multilingual chatbot designed for practice interactions at any time you want.

# Introduction

Polly T. Glotica is a chatbot that helps people to learn the language at any time of day. Polly can maintain a good conversation with humans and keep you enthusiastic about learning more.

# Capability

Polly can speak several languages thanks to ChatGPT's multilingual capability. Currently, Polly can answer text and voice messages with Whisper and Google's Text-to-Speech APIs. Polly understands the context of previous conversations, and we save the last few conversations between users.

# Market

Polly is designed for amateur language speakers who intend to find brush-up courses with native speakers/speakers in general.

Competitors:

- Duolingo
- Rosetta Stone
- Busuu

Opportunities:

The advantage over the learning platform, structure, and restrictions. No downloads are required.

# Conclusion

Polly may be the next step forward as an interactive educational tech tool; with powerful language models such as GPT-3.5 and connectors for multimodality, it will grow into a learning platform for language and communications.
