ABOUT APP

A subscription-based service that uses a personalized algorithm, ChatGPT API, and customer feedback to curate monthly deliveries of products tailored to the customer's individual interests and preferences.

TECHNOLOGY OVERVIEW

Curated Club is a subscription-based service that offers monthly deliveries of curated products related to the customer's individual interests and preferences.

SERVICES

- **Feedback learning**
The service uses a personalized algorithm to analyze customer data, combined with ChatGPT API to understand natural language, and customer feedback to curate a selection of high-quality products that are tailored to each customer's specific needs and preferences.

- **Themes exchange**
The service offers a wide range of themes to choose from, such as food and snacks, books, pet care, fitness, and more. It is designed to offer a fun and convenient way for customers to discover new products and hobbies, while also providing a personalized and seamless experience that keeps them coming back for more.

APP FEATURES AND APP DEVELOPMENT

- Customers can choose from different subscription options, such as monthly or yearly plans, and can pause or cancel their subscription at any time. To ensure a high-quality experience, all products are carefully sourced and tested before being included in the subscription box. In addition, customers can provide feedback on their preferences and interests, which is used to further refine the selection of products in future deliveries.

OUR PROJECT

The benefits of this idea are that it provides a personalized and convenient shopping experience for customers, while also supporting small businesses by featuring their products in the subscription boxes. The use of ChatGPT API allows for a more sophisticated and accurate analysis of customer preferences, while also improving customer engagement and satisfaction by providing a more personalized experience.
