Overview

HistoVerse is a platform that is powered by multiple AIs to bring history to life in an entirely new way. Our cutting-edge technology allows users to ask questions and receive detailed answers that are generated by advanced AI systems such as chatGPT and stable_diffusion - and these answers are delivered in engaging, and informative way..

But HistoVerse is more than just a question-and-answer platform - it's also a social media hub where people from all over the world can share their stories and experiences, bringing local histories to the forefront

Objectives

01   Bring unknown stories to the forefront.

02   Help AIs to generate a more plausible histories, whether it is in form of images, videos, or text.

03   Making learning about the past more exciting and accessible than ever before.

HisBot

A simple MVP that use ChatGPT API to generate stories about the topic enterred, and give a promp to stable diffusion AI API to generate more plausible image. However, our goal with HistoBot is to generate more advanced and plausible stories, such as videos simulations, and AR simulations.
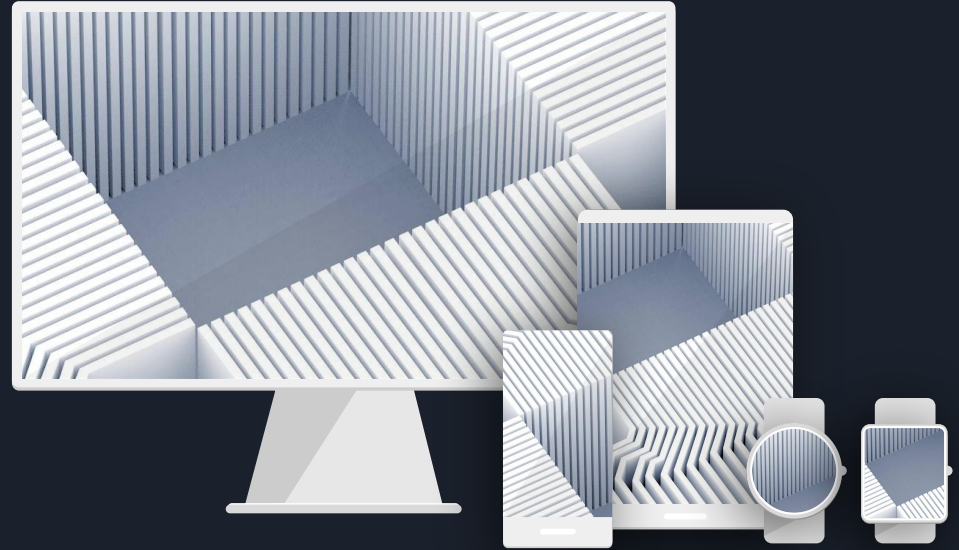

However, HisBot will be powered also by HisBook (A social media Hub where people from all over the can share their stories and experiences, bringing local histories to the forefront)to generate more plausible simulations.

Thank you!
