

# Rubberduck

Have you ever felt like you can't retain all the information from a talk, class, or event? Or maybe you're stuck on a problem and need new perspectives to find innovative solutions? Introducing "Rubber Duck", your intelligent virtual assistant based on the concept of "rubber ducking"!

The term "rubber ducking" comes from the practice where programmers explain their problems to a rubber duck in order to clarify their thoughts and find solutions. Rubber Duck uses the power of GPT and Whisper to listen and transcribe your conversations, classes or events, summarize the most important information, and ask questions based on the Socratic method to help you learn and find innovative solutions.

With Rubber Duck, you'll never have to worry about taking notes or missing important details again. Let Rubber Duck be your study and problem-solving partner, and watch as it helps you reach new heights in your learning and creativity!
