Problem

**Teams spend a lot of time delegating
email tasks. What if it can be done
automatically?**

Solution

A Gmail Addon that **classifies emails
based on their content and labels
them accordingly**

How does it work?

01 User labels existing emails

02 The addon looks at these emails and learns to label new emails

03 All new emails will be labeled automatically

The addon sends existing labelled emails and the new email to the backend. Cohere Classify is called with older emails as "examples" and the new email will be the "input"

Use cases

Positive

I would like to know more

Negative

Sorry I'm not interested at
the moment

Use cases

Action

Please send us an invoice

Query

I would like to know your
hourly rates

Use cases

Urgent

I need this ASAP

Trivial

No Problem. Take your
time

Other

I would like to talk
more

Thank You
