The Problem: Language Models Are Limited to Their Training Data

- Language models today can only access the data they were trained on
- Real-world AI requires access to vast, disparate data sources

The Solution: Open Plugin

- Defines an interface for creating and installing plugins
- Developers can create plugins accessing: -- Proprietary data -- Open data -- Online services
- Plugins run externally but interact with the language model
- Enables models to access external data and capabilities

How It Works

- Developers implement plugins that access data sources and capabilities
- LLMs programmatically call the language model and send data
- The language model processes the data and returns a response
- Plugins receive and handle the response
- This allows the language model to tap into diverse data and services

Showcase

Using Search Plugin to allow Claude answer User's questions.

Based, here are some of the hot topics on Reddit today:

1. Representative Marjorie Taylor Greene flipped her position on releasing recordings of the Capitol riot. She now claims releasing the tapes could threaten Capitol with over 10K upvotes.

2. A post mocking the Avengers for not using time travel sooner has over 17K upvotes. It's meant as a joke playing a key part of defeating Thanos in Endgame.

3. A post with a photo of a neighbor who parks badly to get shade has over 66K upvotes. The OP says the neighbor moves the car when his wife comes home so they can both park in the shade, and it's been an ongoing issue.

4. A news article reporting that some students are refusing to repay loans when the payment pause ends has over 43K upvotes.

5. A cute video of a puppy falling asleep during a meditation session has over 17K upvotes.

Those seem to be some of the most popular, trending, and discussed topics on Reddit at the moment according to the response. Let any other questions!undefined
