claude-copilot-cli

```
───────────────────────────────── Query ─────────────────────────────────

1. list ts files including in subdirs

──────────────────────────────── Command ────────────────────────────────

find . -name '*.ts' -type f

────────────────────────────── Explanation ──────────────────────────────

* `find .` is used to search for files.
- The `.` specifies to search in the current directory and all subdirectories.
- The `-name '*.ts'` flag indicates to only search for typescript files.
- The `-type f` flag restricts the search to only regular files (as opposed to directories, lin
ks, etc.).

? Choose an option:    Actually, I can be more specific. Let me clarify.
? Enter your revision:  ignore node modules
```

## Getting Started

1. Clone the repo:

   ```
   git clone https://github.com/marvinyan/claude-cli-copilot.git
   ```

2. Rename the `.env.example` file to `.env` and fill in your Anthropic API key.
3. Build the project:

   ```
   npm install  # or pnpm install
   npm run build
   ```

4. Setup alias command:

   ```
   npm link
   chmod +x ./lib/index.js
   ```

5. Run the script:

   ```
   c3? "list all .js files"
   ```

Known Issues

1. Sometimes Claude will respond with a string that is a mix of JSON and commentary, causing the script to crash.
2. The script will clear the entire terminal window. Ideally, it should only clear the script's output.
