

# ThinkSync

Collaboration Powered by Claude AI

# The Problem

- Current LLM chatbot solutions are optimized for 1:1 interaction
- Teams need a way to collaborate with their LLM being “one of the team”
- Work teams need tools for summarization, action items, and generation using AI
- Generative AI output needs to be convenient to export and put to work

# How does ThinkSync intend to solve the problem?

- Building off a teams like, slack like interface, add in your own API key and chat with /claude command
- Invite team members in, and engage with the claude API together

# Future Roadmap

- Add Stable Diffusion Image Generation
- Explore other generative AI APIs to integrate into a plugin “store”
- Create useful commands for specific objectives such as summarizing chats, create action items, etc
- Integrate with team management and scheduling APIs
- Add audio transcription to bring these features to audio
- Add video transcription to bring these features to video
