THE PROBLEM

A lot of time is wasted on simpler things.... Why not automate and save time?

A lot of money is spent on middle office tasks

Time consuming simple tasks could lower productivity

Human error could lead to bad decisions

Project Idea

Book Recommendation Engine

Problem definition

The library's mobile application currently lacks a personalized experience for users. Users have to browse through a vast number of books available in the library. The app should recommend books based on user history and preferences, increasing user engagement and satisfaction.

INTRODUCING AURACLE

Metrics and goals

The primary goal is to increase user engagement with the app, measured by the number of books...
