We have try auto claude preformance
which is better than GPT3.5 turbo

How Bard performance?

AI Agents Hackathon   Life unlimited

Auto Claude 100k

I've modified AutoGPT version 0.3.1 to use Claude's 100k
API in order to address the memory and retrieval issues in
AutoGPT.

Auto Claude 100k

Claude provides an API that accepts up to
100k tokens. AutoGPT faces challenges with
memory and retrieval, which you can learn
about   at   https://docs.agpt.co/challeng...

We use google PaLM2 api instead of openai api

But find PaLM 2 would produce abnormal json

```python
# resp = sendReq(pmt)
resp = bard_chat(str(prompt.raw()))

if "without seeking user assistance" in str(prompt.raw()): # fix json
    # fix json error
    resp = ai_fix_json(resp)

print("=============resp=============")
print(resp)
print("=============resp=============\n")
```

So we use ai function of openai to correct json

In auto_gpt

claude_100k > gpt 3.5 turbo > palm2
