# Enterprise Voice Customer Service Solution
The global call center sector earns >$100bn annually. The current voice bots used by US firms are primitive and painful. With cutting-edge AI, a smart voice bot can boost efficiency and scalability, saving billions while increasing customer satisfaction.

Introduction

The global call center sector earns >$100bn annually

Smart voice bots with cutting-edge AI can boost efficiency and scalability

01

02

03

04

Current voice bots used by US firms are primitive and painful

Save billions while increasing customer satisfaction

Challenges with Current Voice Assistants

- Large American corporations like United Airlines receive millions of customer calls
- Voice assistants often lead to customer frustration
- Customers often have to request to talk to a human agent

Value Propositions and Competitive Advantages

Integrating with the booking system to handle high demand during holiday seasons

Improving efficiency in processing customer requests with intelligence

01

05

02

Handling a wide range of tasks and redirecting sophisticated requests accurately

Saving large enterprises billions of dollars while improving customer satisfaction

04

03

Providing a more personal and efficient customer service experience

Targeting the Lucrative Market

Small businesses already have text chatbot automation products

Voice customer service offers a more personal experience

Large enterprise market has higher potential for revenue

Revenue Model

01

Large installation fee for system integration into enterprise systems

02

Small service fee based on the quantity of services

03

Long-term partnerships with large enterprises

Conclusion

- Enterprise voice customer service solution offers immense potential
- Transforming the call center sector with AI
- Improving customer satisfaction and saving billions
