# THE PROBLEM

**Individuals with communication difficulties may face limitations in effectively engaging in verbal conversations. These factors hinder inclusivity, independence, and effective communication for these user groups.**

## ADHD

Adult attention-deficit/hyperactivity disorder (ADHD) face difficulties in retaining key points or unable to actively engage in conversation

## Introvert

Introverts may experience discomfort or anxiety when engaging in verbal communication.

## Hearing-impaired

People who have little or no functional hearing face challenges in understanding spoken language during phone calls, lack of real time feedback.

**Convo AI**

## OUR SOLUTION

**ConvoAI harness the power of AI helping individuals with recommended responses, answering conversations, and post-call summaries.**

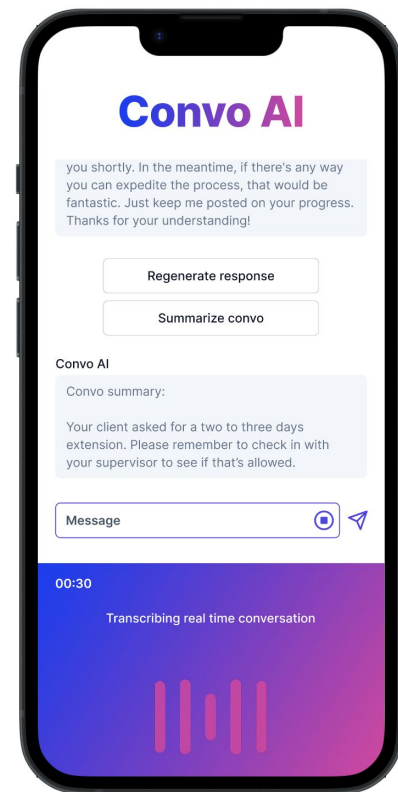

- **PaLM 2** interprets users' requirements and manages phone interactions, enabling the application to perform tasks autonomously.
- **Google Speech-to-Text** transcribes users' spoken input into text, thus allowing PaLM 2 to understand and process the users' needs accurately and efficiently.
- **Google Text-to-Speech** takes the system's text responses and converts them into speech, making the application more accessible and inclusive.

# OUR SOLUTION

## Features

- [Next.js](#)
- [shadcn/ui](#)
  - Styling with [Tailwind CSS](#)
  - [Radix UI](#) for headless component primitives
  - Icons from [Lucide Icons](#)
- [Zod](#): TypeScript-first schema validation with static type inference
- [Zustand](#) 🐻 Bear necessities for state management in React
- [framer-motion](#): Complete documentation of the Framer Motion animation library. A production-ready motion library for React.

## POSITIVE IMPACTS

- Improved focus, organization, and communication for ADHD individuals.
- Increased accessibility for individuals with hearing impairments.
- Promotion of inclusivity and equal communication opportunities.
- Enhanced self-expression and active participation.
- Reduced anxiety and improved mental well-being during phone interactions.

# MARKET OPPORTUNITY
