

Problem Statement

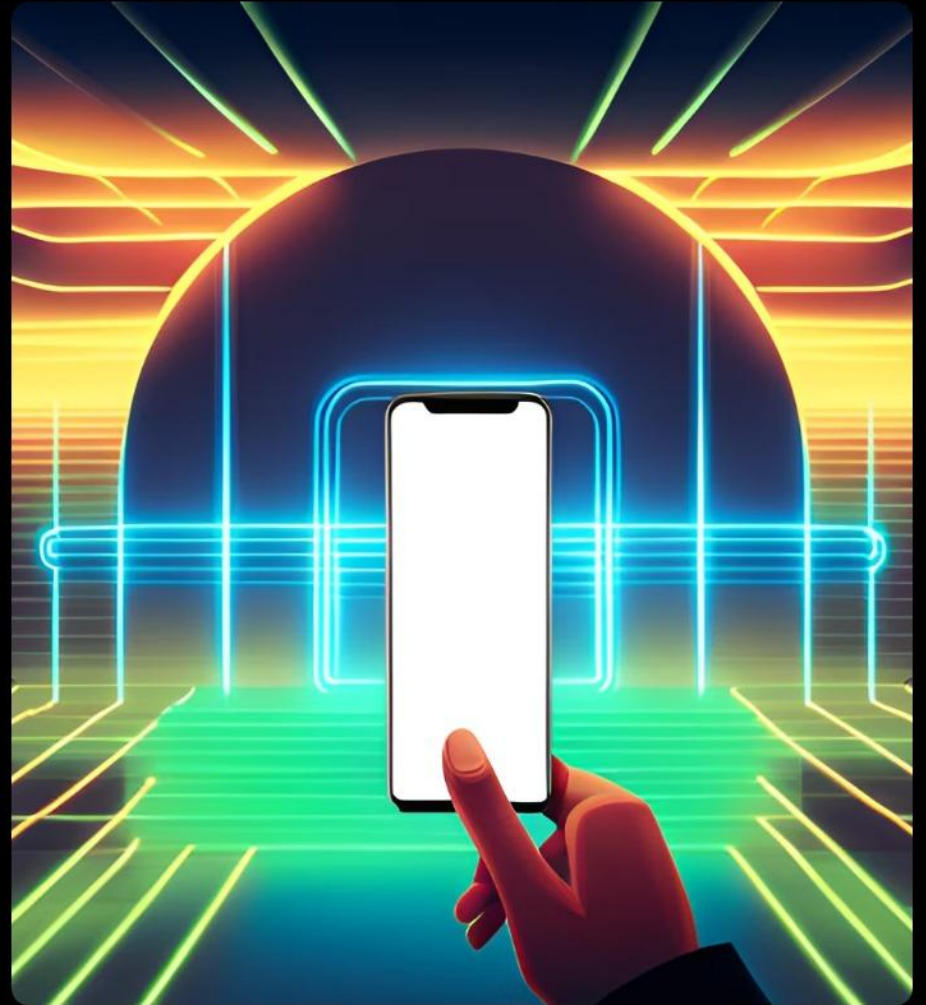

Tired of reading long PDFs?

Tired of listening to long podcasts?

Wish you could interact with your material?

Want to compare your documents with the general information?

In today's day and age, users find it increasingly difficult to extract crucial information from long-form content. We try to address this problem with our app TalkToMe where users can consume the crux of the content in a more engaging fashion

Our Solution

In our app, a user can upload an audio file/ document of their choice. Based on Google Cloud's latest technology, we create an avatar out of the content that can summarize the content and engage with the user in a Q&A format.

**Engage with your content like never
before with our AI ChatSession**

Introducing

TALK  TO ME

Use Cases

- Education
- Research
- General Interest

Features :

- **Conversing with your Files**
- **Summarizing your files**
- **Combine real world info with files**
- **Store Your Conversations**
- **Responsive UI**

Future way to interact with your files

You don't have to be a programmer or sound engineer to make use of TalkToMe.
Just upload files and start using it!

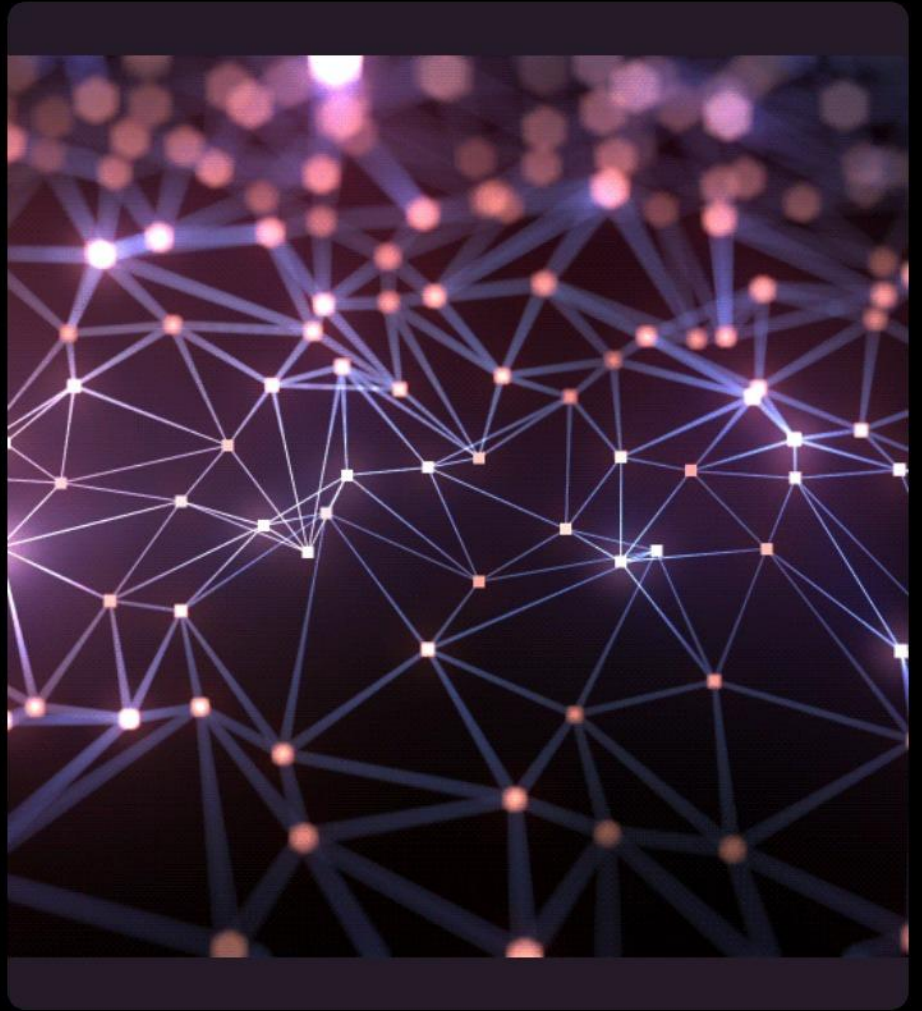

[Start talking now](#)

**Make your pdfs and audio files
come to life.**
