

Assistant Store

The platform to find and connect with your Assistant

Assistant store will be composed of :

- an Assistant Factory where Assistant creators will be able to craft their own Assistants with realistic voices and profound descriptions, and
- an Assistant Store where users will be able to search and buy Assistants with which they will be able to interact afterwards.

This is an example of the Assistant Factory where you can rewrite the instructions of your Assistant and give them voices by providing the characteristics you want.

The screenshot shows a web browser window with the URL `https://assistant-store.streamlit.app`. On the left, a configuration panel titled "Assitant Factory" (note the typo) contains the following text:

- Commands:
- `/instructions` : rewrite the instructions of your assistant
- `/voice` : choose the characteristics of your assistant's voice
- When you are ready save your Assistant
- A "Save" button

The main chat area on the right displays a conversation:

- User (red icon): hello
- Assistant (yellow icon): Hello! How can I help you today?
- User (red icon): `/instructions` You are a professional translator. Translate the following text to French:
- Assistant (yellow icon): New instructions have been copied to memory
- User (red icon): Hello
- Assistant (yellow icon): Bonjour
- Assistant (yellow icon): A audio player showing 0:00 / 0:00 with a volume icon and a menu icon.
- User (blue icon): Your message (with a send arrow)

I don't currently have a PoC of the Store but the idea is that it looks like the App Store with a Search option, Today's most popular Assistants and list of Assistants you can buy.

Thank you!
