# Meet Jacob

## Meet Jacob Parsons

➔ Jacob Parsons is an AI enthusiast with a strong passion for artificial intelligence. Through self-directed learning, he has developed a good understanding of AI concepts and a

➔ pplications. Jacob is always eager to expand his AI knowledge through continuous study and staying up-to-date on the latest advancements in the field.

➔ His dedication to mastering AI allows Jacob to come up with innovative solutions and ideas. He is adept at grasping complex technical details through independent research and perseverance. Jacob's self-motivation enables him to pick up new skills necessary to apply AI, even without formal training.

➔ While he is still honing his abilities, Jacob's enthusiasm for AI and willingness to teach himself makes him a valuable contributor to organizations exploring how to leverage AI technology. His drive to continuously expand his capabilities will allow Jacob to develop specialized expertise over time.

# The Language Barrier Problem

➜ Language is a fundamental aspect of human communication, but it can also be a significant barrier. In today's globalized world, businesses and individuals often find themselves interacting with people from different linguistic backgrounds. This can lead to misunderstandings, miscommunications, and missed opportunities.

➜ Language barriers can affect everything from international trade to tourism. For example, a company trying to expand into a new market may struggle to communicate with potential customers or partners who speak a different language. Similarly, a tourist visiting a foreign country may have difficulty navigating local customs and services without a basic understanding of the local language.
# The Solution: Near Real Time AI Translator

➔ Our solution to the language barrier problem is a near real time AI translator powered by elevenlabs. This innovative technology allows for seamless communication across different languages, making it easier than ever to connect with people from all over the world. With our AI translator, you can communicate in real time without the need for a human translator or interpreter. This is a game changer for businesses that operate on a global scale, as it eliminates the need for expensive translation services and streamlines communication.

➔ Our AI translator is packed with features that make it stand out from other translation tools on the market. It has a user-friendly interface that is easy to navigate, and it supports multiple languages, including some of the most commonly spoken languages in the world. In addition, our AI translator uses advanced machine learning algorithms to improve accuracy over time, ensuring that translations are always precise and reliable. Whether you're communicating with clients, colleagues, or friends and family, our AI translator makes it easy to bridge the language gap and connect with others in a meaningful way.

# Revenue Stream

➜ Our revenue stream will be based on a monthly subscription plan that offers unlimited translations to our users. We believe that this model will be more sustainable in the long run as it allows us to continually improve and update our AI translator without having to rely on one-time purchases or ads.

# Next Steps/Backlogs

➔ The next step for our near real time AI translator is to implement multi-way functionality. This means that the translator will be able to translate conversations between more than two people at once, making it even more useful in business settings where meetings often involve multiple participants. We are currently working on perfecting this feature and hope to have it available in the near future.

➔ In addition to multi-way functionality, we are also exploring the possibility of adding additional languages to our translator. While we already support a wide range of languages, there is always room for improvement and expansion. Our goal is to make our translator as comprehensive as possible, so that it can be used by anyone, anywhere in the world.
