Infinite Topics, One AI: The Future of Podcasts

What if users become their own content creators?

Many podcast generation apps are targeting content creators. Using Anthropic Claude, we wish to flip this model upside its head.

Solution

Generate Podcasts with AI

51 podcasts generated so far.

Top Down Market Sizing

US PODCAST LISTENERS		REGULAR LISTENERS		ANNUAL VALUE CREATION		MARKET CAPTURE		EXPECTED ANNUAL VALUE
177 million	Х	50%	Х	\$20	х	10%	=	\$170 MM
		Half of this amount regularly tune into their favorite podcast each month		Assuming the average customer spends this amount using our service		Assuming we can convert 10% of these users into paying customers		

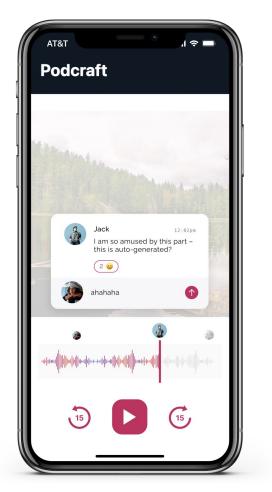

Our team aims to address three core questions related to this venture. After sharing the MVP with **15 avid podcasters**. From this data, we determined that three sprints should be conducted to address the following questions: [1] Sharing and [2] Content Generation

Roadmap

Sprint #1: Sharing

Auto-generated podcasts seem to unlock more value if we can package them into *shareable experiences*.

- "I don't feel connected or 'together' with people"
- "I don't feel like this is unlocking my creativity or making me apart of some greater"
- "Can you make this about my friend Isaac?"

Mockups generated from feedback from user testing

Sprint #2: Podcast Generation

Users loved our product concept, but *they didn't always know* what they wanted to create.

Providing users the ability to create podcasts that are emotionally relevant, and recently relevant, containing all the information they should need on a recent evolving topic. Specifically, we saw users requested:

- **Referring to unique individuals:** "Write me a podcast on how awesome Marcus Ellison" Who is Marcus Ellison? Can we use AGI to do real-time search scan across multiple sources
- **Referring to recent events**: Can the podcast talk about the recent events in depth?

Thank you
