Hours spent taking care of the
patients

Exhausted Caregivers

- Partner, child, grandchild
- Yet suffer from mood swings
- Exhausted by repetitive questions
- And no time for other life priorities

Introducing... Almond!

Supplemental AI companionship

**Memorize what
the patient has
heard and said**

**Answers with
ultra patience, or
apply therapeutic
fibbing**

Focus on meaningful engagement

Almond calms the patient down by answering questions patiently, instantly and empathetically from past recordings, relieving the caregiver from mood swings and mental exhaustion.

Free up time for other life priorities

Almond keeps the patient busy with reminiscence therapy and entertainment, freeing the caregiver up for other life priorities

Therapeutic companionship for quality care

Almond applies strategies such as therapeutic fibbing so caregivers can rest assured their loved ones are taken good care of.
