

PRESENTING

*Nurture
Lullaby*

An underwater scene with a blue background. Several pink and green fish with white scales are swimming. There are white and pink confetti-like particles. A large pink scallop shell is on the right, and a blue nautilus shell is on the bottom left. Purple coral is on the bottom right. A large, light blue speech bubble is in the center, containing the text.

*Kids Don't Read
Books Because
Parents
Don't Read Books*

Some Data We Found

73%

of parents believe reading to their children at a young age is very important for their children's learning.

Problem Statement

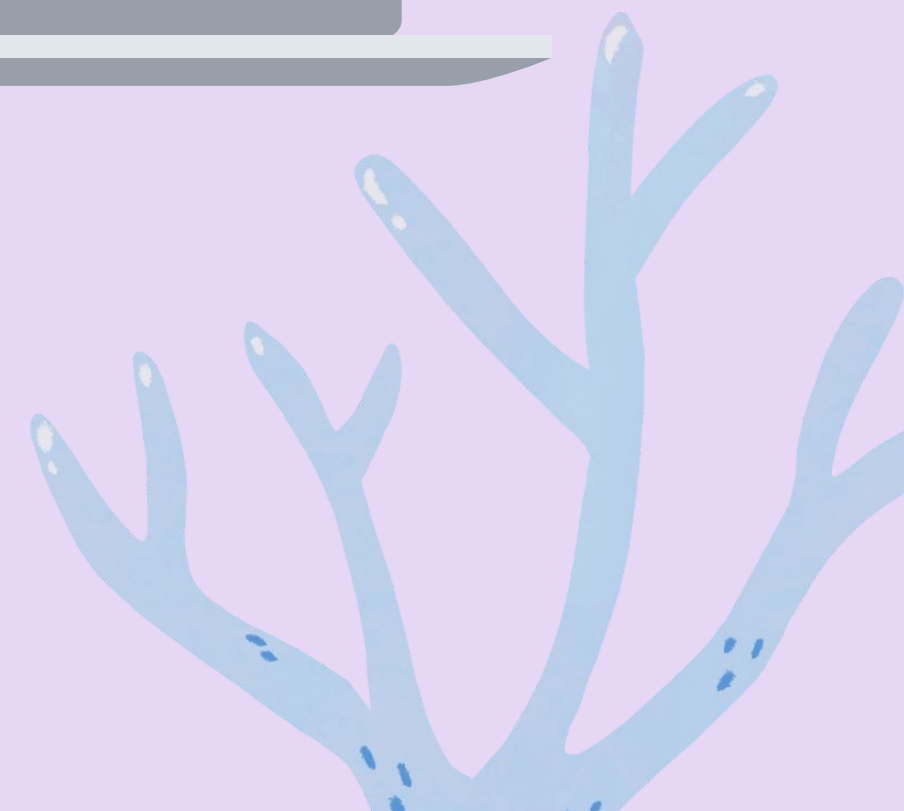

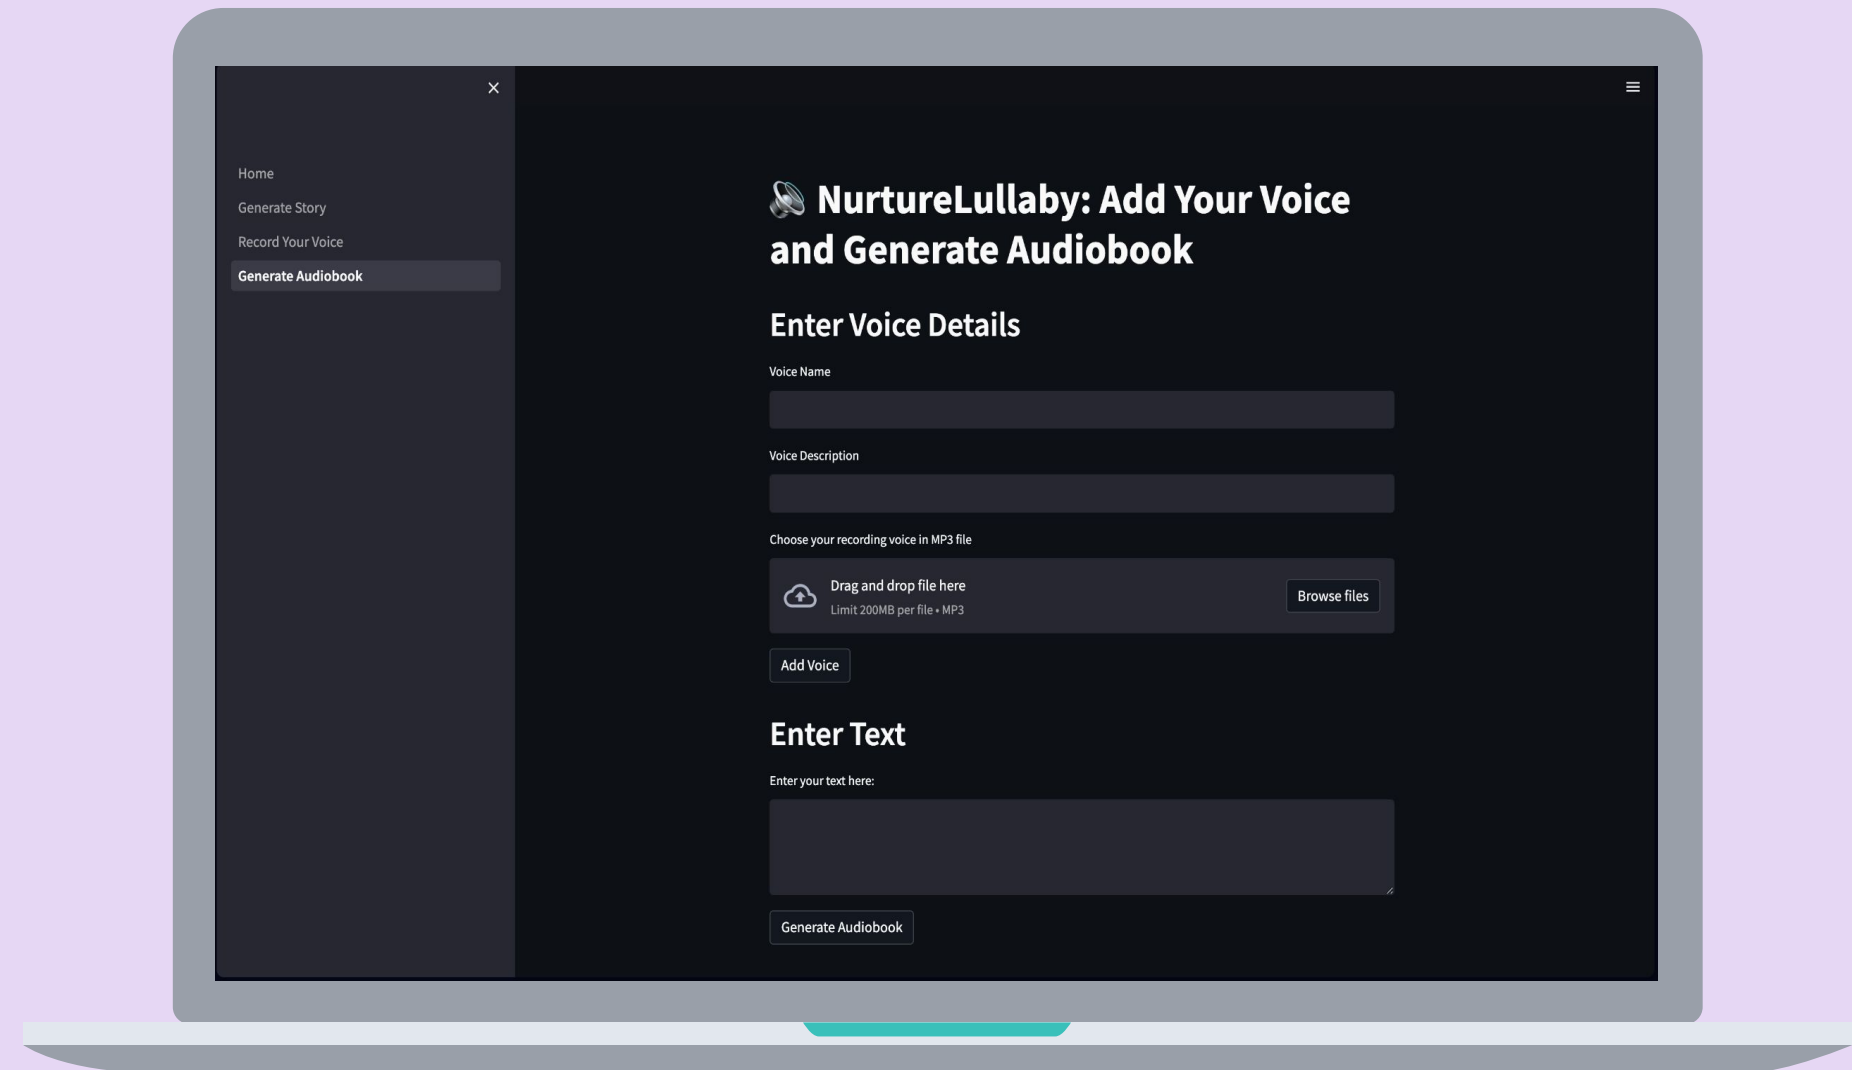

How can busy parents consistently provide the cognitive and emotional benefits of bedtime stories to their children?

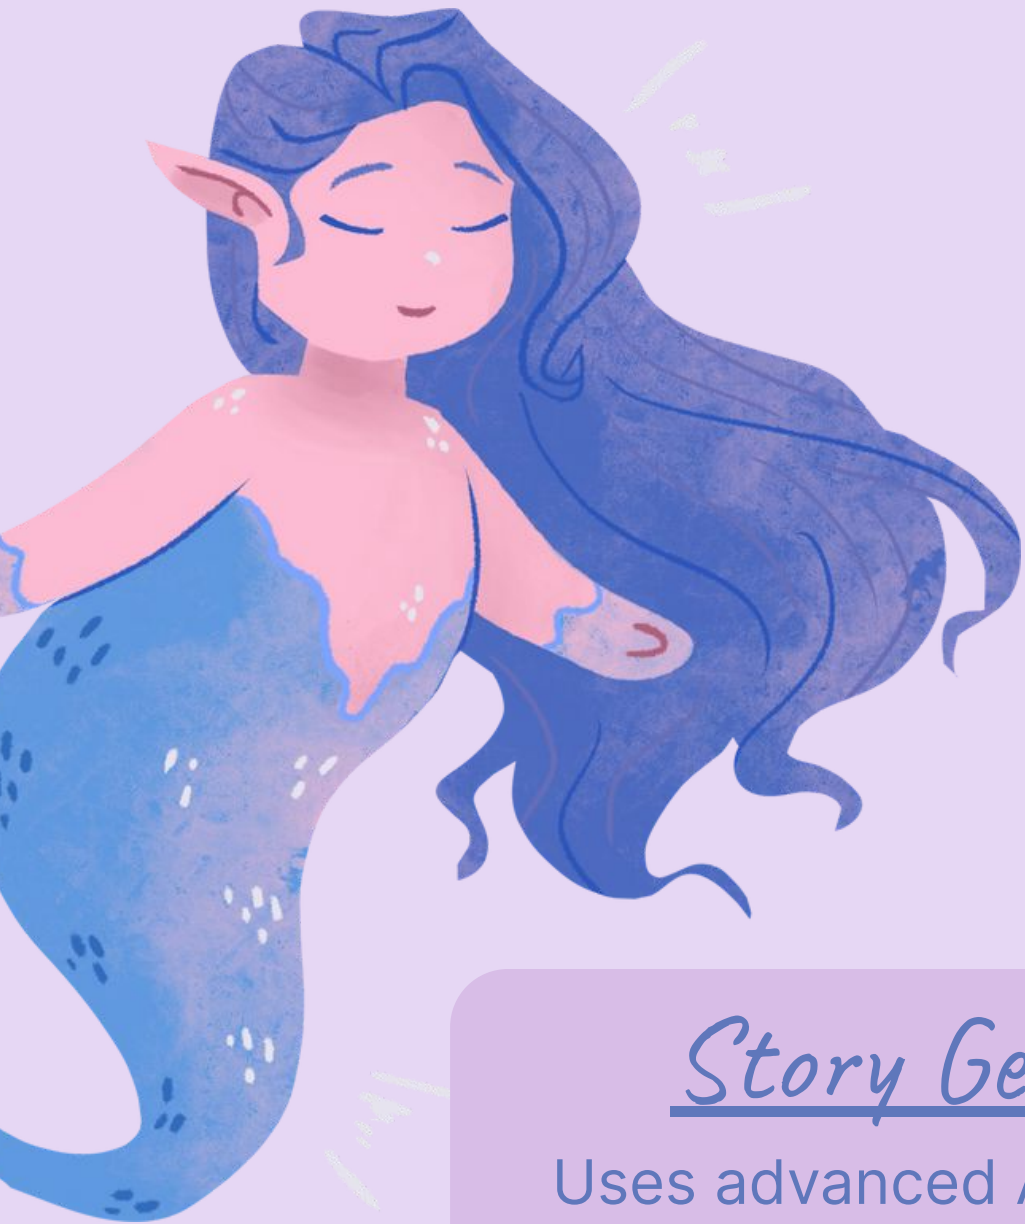

NurtureLullaby

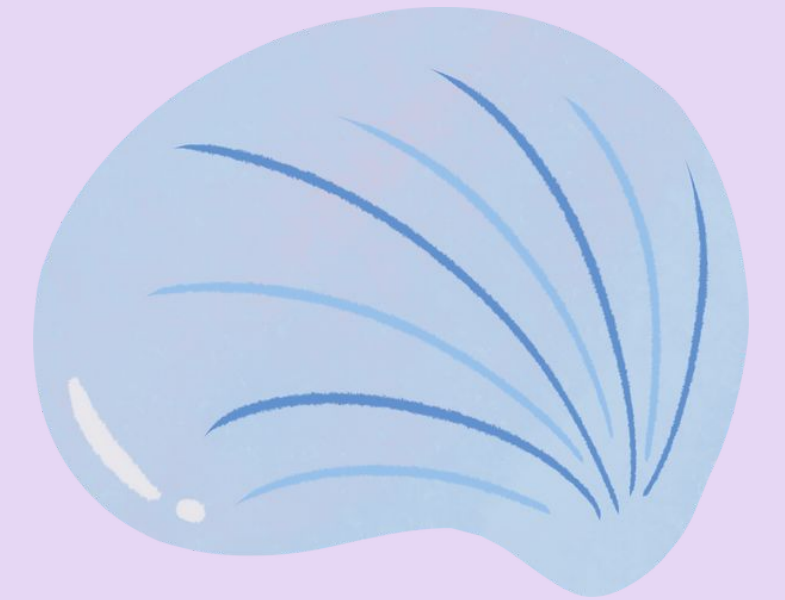

NurtureLullaby is an AI-powered application that enables parents to create personalized audiobooks in their own voice, providing an engaging and convenient way for children to enjoy bedtime stories.

2 Main Features

Story Generation

Uses advanced AI technology to generate engaging and age-appropriate stories based on user inputs such as the child's age, interests, and preferred story type.

Personalized Text-to-Speech

Uses a sample of a parent's voice to create a unique synthetic voice clone, which narrates the generated story, making a personalized audiobook that sounds like it's read by the parent.
