

Religious Stories Generative AI: The AI  
that gets your stories read and questions  
answered from a multilingual context.

Presented by  
Rozanne Owino

# Target audience

- \* Children from age 9, men, women, and other from different religious background.
- \* Christians
- \* Muslims
- \* Hindu's
- \* Jews
- \* Et al.,

# Problem

- \* Religion is an agency of socialization. This means it helps in building values such as love, empathy, respect, and harmony.
- \* As the world evolves and adapts to technology. Generative AI religious stories is a solution for children and parents to have a source for information.

# Solution

- \* age-appropriate religious stories, increases the speed of getting answers from the books based on the facts on different chapters. This means that children, adolescents, and adults get a quick platform that has conducted research and have accurate answers to their questions.
- \* It makes it easier for children to understand various stories as the AI acts as a Sunday school/ religious teachers.
- \* It is an inclusive AI.
- \* With the source being specifically, from religious books, it presents accuracy and does not dilute the facts that are presented making it the next source of religious context.
- \* This means that there is an increase in socialization based on common values that enhance love, empathy, respect, and harmony especially among, Islam society, that must attend Madrasa at a young age.

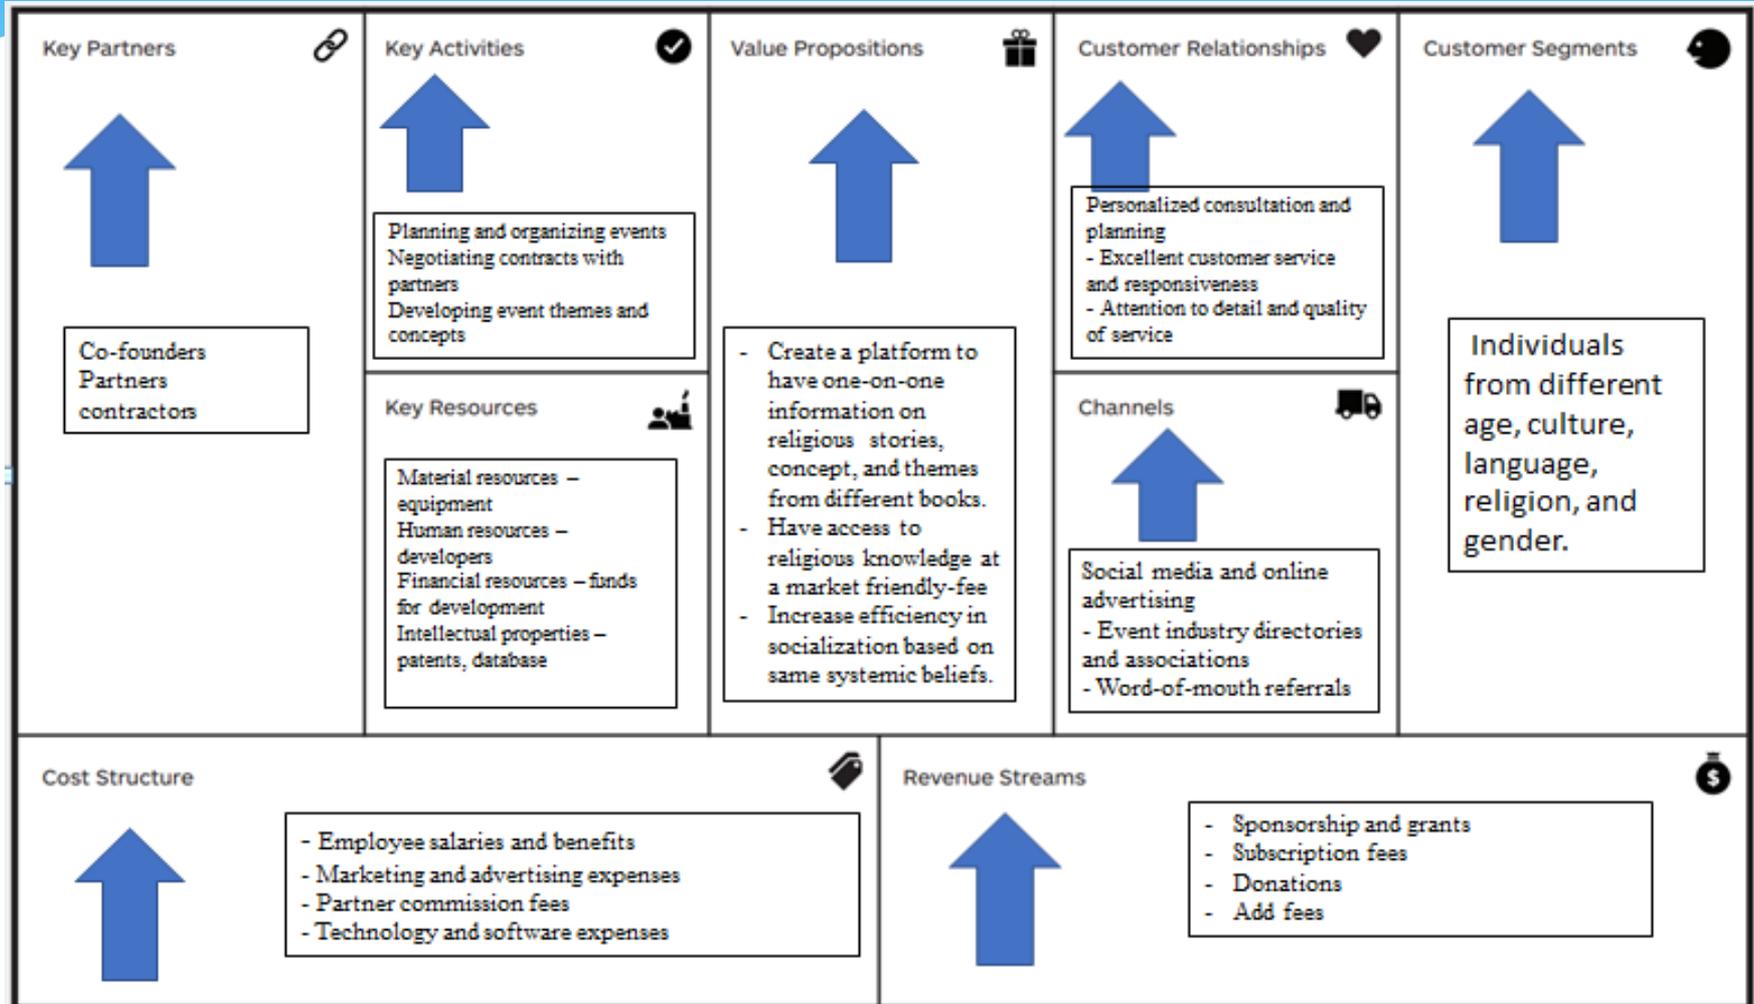

# Market size & opportunity

- \* Based on the research, the generative AI has the potential to be adapted globally, as it cuts across
- \* 2.2 billion Christian followers,
- \* 1.6 billion Muslims followers,
- \* 1 billion Hindus.
- \* The opportunity for the AI is endless as it can be adapted globally and become a regular use for most households. This means that the app can have an average of 1.6 billion users through the correct marketing channel and incentive.

# Marketing & growth strategy

- \* The strategy will apply the 4p's through different advertising channels to diversify and reach the target audience swiftly.
- \* The technology is inevitable, as it is the future of religious story telling.

# Business model and revenue streams

# Milestones

- \* The current MVP is upgraded in the backend and frontend.
- \* The next steps is to include other features, languages, and books in order to have a global scale.
- \* The backlog is based on developing the FaithAppAI to on flutter to have both IOS and Android for the app to be accessible.
