Why It
Matters

About the project

Langvatar aims to empower people to **learn language conversationally** through a personalized tutor avatar.

How it
starts

Project background

There are many language learning app and conversational chatbot on the market. **Langvatar** strives to make all of them accessible under a single environment.

Where it
leads to

Defining a target

We plan to include more languages other than English as well as more ways to interact with the platform plus additional avatars with customizable personality traits.

How it is now **Where we are**

With that said, we first plan to test out some basic features like different text format and different conversation result, before attempting to serve any kind of customization.

Thank you!
