Process data

Output information

Step 2b: Use CPU to extract pitch (if the model has pitch), use GPU to extract features (select GPU index):

Enter the GPU index(es) separated by '-', e.g., 0-1-2 to use GPU 0, 1, and 2.

0

GPU Information

0 Tesla T4

Select the pitch extraction algorithm ('pm': faster extraction but lower-quality speech; 'dio': improved speech but slower extraction; 'harvest': better quality but slower extraction):

○ pm    ○ harvest    ○ dio
○ crepe    ○ mangio-crepe

Feature extraction

Model fusion, can be used to test timbre fusion

Path to Model A:                          Path to Model B:                          Weight (w) for Model A:        0.5

Path to your model A.                     Path to your model B.

Target sample rate:        ☑ Whether the model has pitch guidance.        Model information to be placed:    Saved model name (without extension):    Model architecture version:
● 40k    ○ 48k                                                                         Model information to be placed.    Name for saving.                          ● v1    ○ v2

Fusion                                    Output information

Modify model information (only supported for small model files extracted from the 'weights' folder)

Path to Model:                           Model information to be modified:         Save file name (default: same as the source file):

Path to your Model.                       Model information to be changed.          Either leave empty or put in the Name of the Model to be saved.

Modify                                    Output information

View model information (only supported for small model files extracted from the 'weights' folder)

Path to Model:                           View                                      Output information

Model path here.

Cache all training sets to GPU memory. Caching small datasets (less than 10 minutes) can speed up training, but caching large datasets will consume a lot of GPU memory and may not provide much speed improvement

☑ Save a small final model to the 'weights' folder at each save point
