

Personal Researcher

Hacky

Problem

Some people these days:

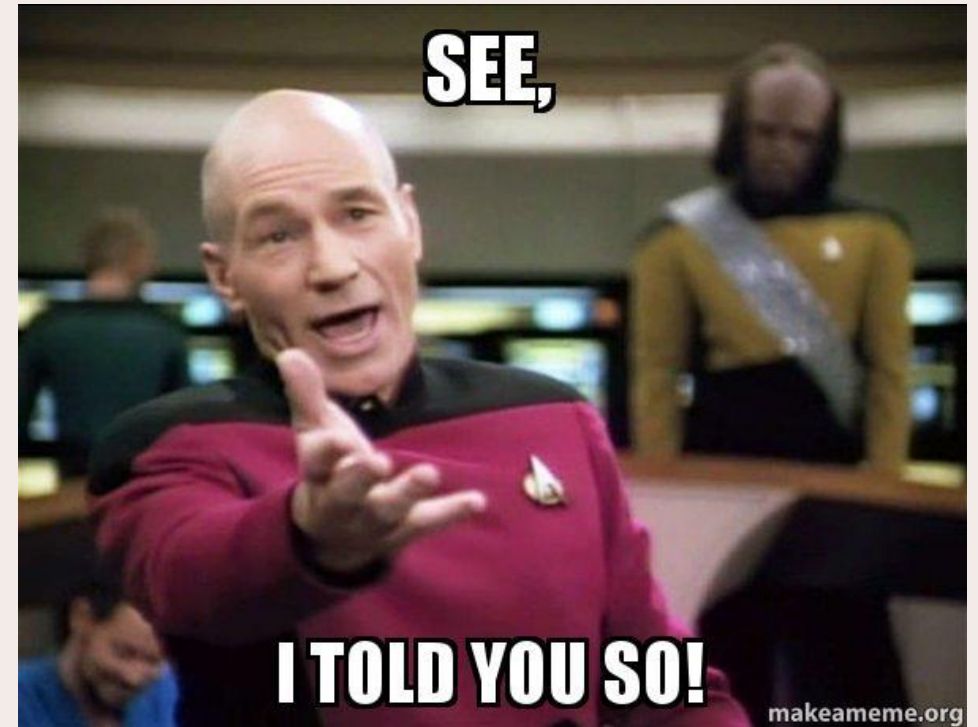

Large Spread
of information
without any
reference
source

Very hard to find
references/source
of truth for a topic

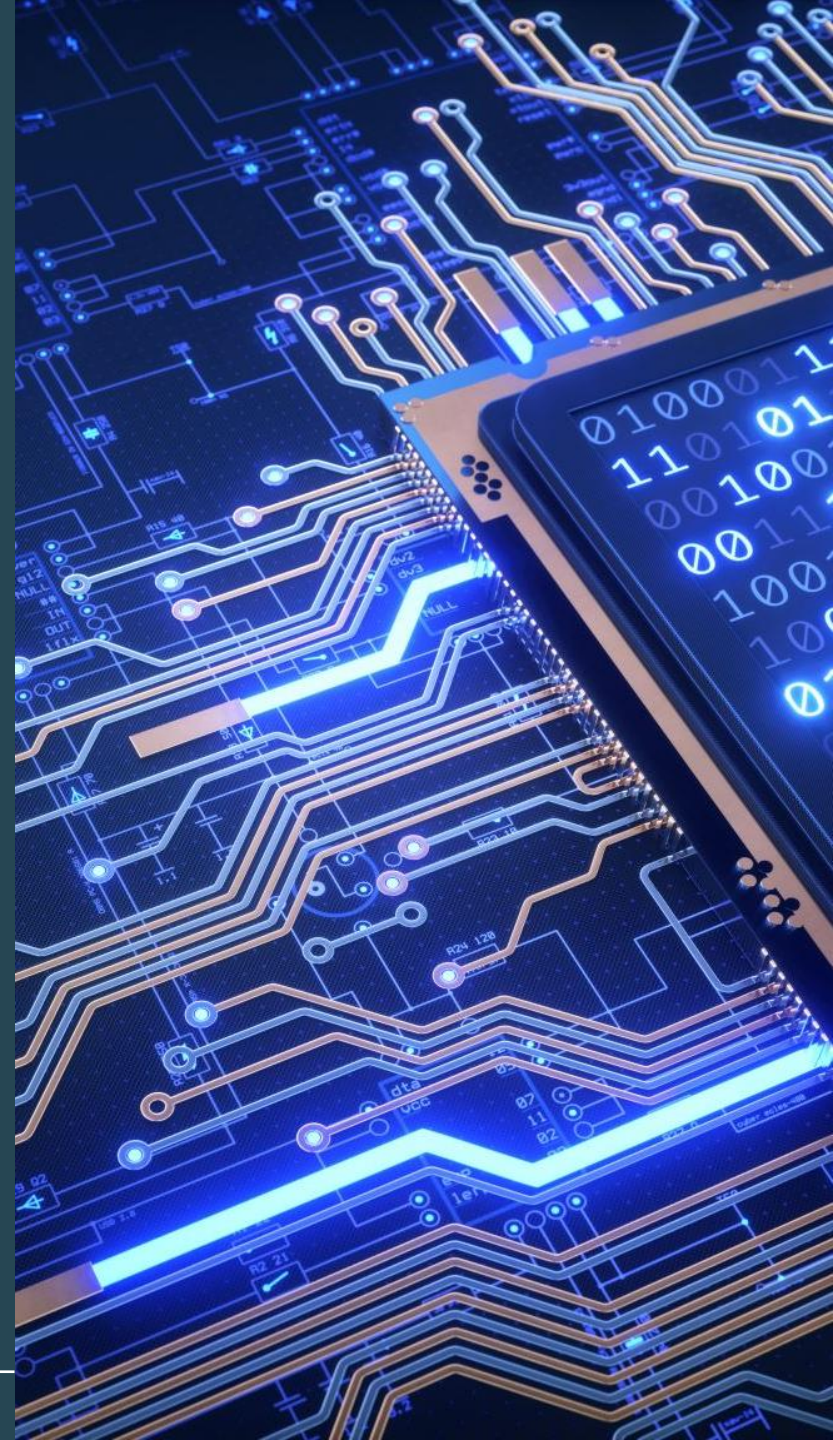

People believe
in false
information
and don't see
truth

Solution

1. An Autonomous App, that does the research and finds references for you.
2. It also finds whether a thing/topic is True or not.
3. The app identifies the section of the reference link that contains the relevant information for the user's query.

Summary

- Get **LINKS** for an article/research along with **TEXT** that makes sense from the web page.
- Find whether **anything**, any research, any article, or news has **any valid references** or sources.
- Another use-case: **Plagiarism** Detector – Teachers can use this to find whether a student's work is copied or not from any website.

Thank you
