Solution HIGHLIGHTS

- Conversational interface for engaging with scholarly content.
- AI-driven search engine to provide relevant and accurate results.
- Integration with existing academic databases and resources.
- A platform for both casual learning and serious academic research.

Stage 1 - MVP

The initial phase focuses on building a minimum viable product, offering a conversational interface and AI-driven search capabilities. It serves as the foundational platform for engaging with scholarly content.

Stage 2

This stage involves the integration with complex autonomous agents to explore connected articles, access multiple open-source scientific databases, and facilitate content creation, summaries, note writing, and research assistance. It elevates the user experience with advanced features.

Stage 3

Taking the platform to a whole new level, Stage 3 aims to introduce innovative technologies and functionalities that transcend conventional academic exploration. It's about revolutionizing the way people access, interact with, and benefit from scholarly content.
