

# HrHelper.AI

Hiring just got smarter

```
filterByOrg = filterByOrg ? study.lead_organization === filterByOrg : true  
filterByStatus = filterByStatus ? study.status === filterByStatus : true  
filterByMatchStatus = filterByMatchStatus ? study.match_status === filterByMatchStatus : true  
function filterStudies({ studies, filterByOrg, filterByStatus, filterByMatchStatus }) {  
  return studies.filter(study => filterByOrg && filterByStatus && filterByMatchStatus)  
}
```

# The problem

## Resume Screening

For a single job opening in tech industry, HR departments get on average thousands of resumes.

Sifting through all the resumes by hand is a grueling task. HR professionals will spend weeks going through resumes, spending time to review each resume.

Additionally **75% to 88%** of all candidates are considered unqualified by just their resume

# Our solution

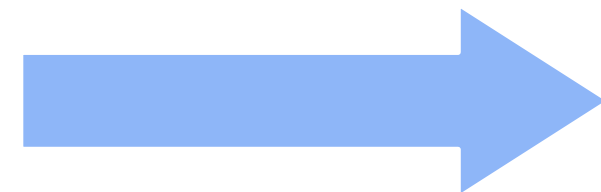

## Automatic resume sorter

- Using our tool companies can now drastically reduce the time wasted on resume screening
- SuperAGI can do the initial screening at a fraction of the cost that humans do. Including basic background checks (scraping Github data of a user)

# How it works

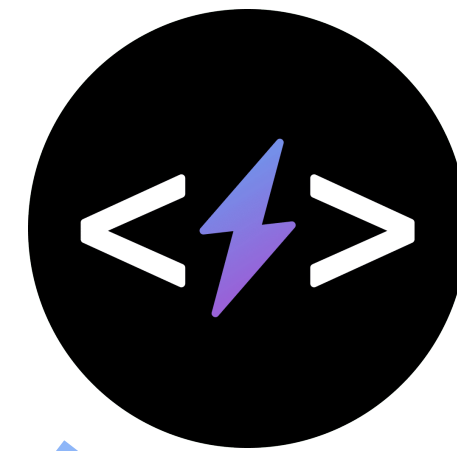

1. HR team send data to Hr-Helper.AI

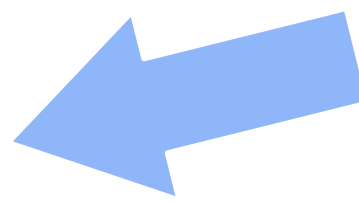

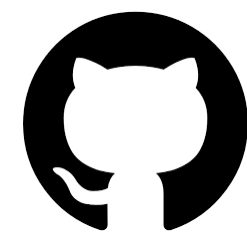

## Hr-Helper.AI

2. Recieves resumes in PDF format in bulk

3. Sends them 1 by 1 to a custom SuperAGI agent that reads each PDF, scrapes it for links, and returns a JSON of insights regarding that user

4. SuperAGI also scrapes github and twitter links if found in a resume, and tries to gain any insight that it can from those networks

# User Interface

## Send in Your Application and Engage With the Most Fitting Companies

Revolutionizing the traditional work landscape, hr helper is at the forefront of a global shift towards remote employment solutions. By seamlessly connecting forward-thinking employers with a vast pool of exceptional talent and empowering skilled professionals worldwide who seek dynamic remote job opportunities, hr helper is reshaping the way businesses and individuals approach work in an increasingly interconnected world.

# Conclusion

## Resume Screening

With Hr-Helper.AI it is estimated that the time wasted on initial CV screening can be reduced by **50%**.

Not only that, but since Hr-Helper.AI gains a lot more insights than a human can within 7 seconds, the time spent on interview phase can be reduced by **at least 20%** by reducing the amount of false positives that go through the initial stage.

The background features a light blue grid pattern. On the left side, there are several blue line-art icons: a magnifying glass over a document, a globe, and a document with an arrow. The bottom of the page has a dark blue area with a white dotted pattern. In the bottom right corner, there is a small snippet of code.

**Your tool is a total game-changer for HR! I was skeptical at first, but It actually is incredibly efficient and accurate.**

- Our friend who works in an HR team

```
function filterStudies({ studies, filterByOrg = false, filterByCountry = false, filterByOrganization = false }) {  
  return studies.filter(study => {  
    return !filterByOrg || study.organization === filterByOrg;  
  });  
}
```
