

AI Project Resources Manager

Llama-2 with Clarifai

TEAM INSIGHT

PAINS

- **It can be hard for managers to keep track of each employee's capabilities and skills**
- **Employees may not be personally interested in the specific project**
- **Some employees may not be satisfied with the quality and quantity of projects they are given**
- **The company loses valuable staff and resources to maintain employees**

Project and objectives

Application is based on Llama-2 ,
which selects the most suitable
employees for the specific tasks
by analyzing their experience
and skills.

It allows the project manager to
offer a place in the team to an
employee who will be the most
effective on a given project.

Llama - 2 allows employees to
work in the most non-biased
environment possible, and to
participate in projects that
really suit them.

Target audience

Companies with a large
number of employees

**ASSISTANT TO
MANAGERS**

Business values

Effective employees - quality and on time project - company profit

All human resources are involved

Saving time on searching for new staff

Savings on finances for maintaining inactive staff

Technical implementation

A chain of five agents based on the Llama -2 model

Each agent fulfills a different role described in carefully constructed and deployed prompts.

A1 - Idea

Understands the project idea and define steps.

A2 - Team

Defines team roles and ideal candidates

A3 - Summarization

Summarizes employees and looking for best match

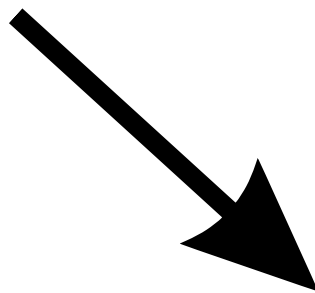

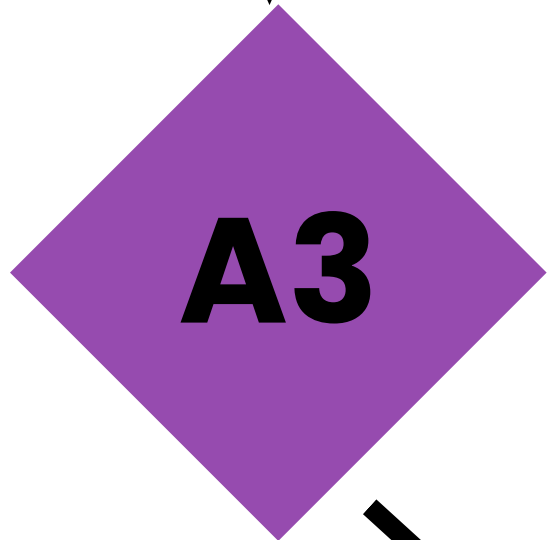

A4 - Evaluation

Sees how an employee matches each of the project roles

A5 - Assessment

Makes the final decision on whether the person is suitable for the project or not
