

Project presentation SereniTalk

Team Genje

Meet team Genje

Behind this innovation is our talented team.

- Erick Otuoma – Machine Learning Expert
- Gabriel Okemwa – Full stack Software Engineer
- Emmanuel Kiprop Kimutai – Product Designer

Your problem statement

- Many individuals, especially in today's fast-paced and digitally connected world, struggle to find a safe and non-judgmental space to openly express their thoughts, emotions, and concerns. This lack of an accessible, supportive outlet can lead to increased stress, mental health challenges, and a sense of isolation.

The solution

- SereniTalk provided an AI chat bot that provides a safe space for our users to open up.
- We used Vectara and OpenAI to achieve a functional V 0.1 of the SereniTalk web app. The app works by providing a conversational interfaces for our users and using the novel RAG provided by vectara to prevent hallucinations when providing concrete data about mental health illnesses.

- We have opened up the web app to a pool of 10 users here in Kenya. 5 of them are excited to join and try out our platform. 3 of them are ready to pay for the service 2 of them say it's the worst idea they've ever heard.

What do you think?

Market Opportunity

- With the mental health of most Kenyans being on edge, together with the fear of a recession, our total addressable market country-wide is 1,000,000 Kenyan youths.
- Our serviceable market right now are youths in universities who add up to 100,000 youths who are facing depression and are too afraid to open up to their peers.

Rise of depression in the past decade

Competitive Analysis

- Our competition are psychologists who are quite expensive for most common Kenyans to afford.

Revenue Model

- We are planning to generate revenue in 3 ways:
By providing a monthly subscription plan for our services.

Demo

Thanks!
