

Huddle is a networking app aimed at builders, indie hackers, and startup founders.

It's a platform where individuals with similar interests can find each other to share knowledge, exchange experiences, and offer mutual support.

Huddle

Huddle is a networking for shy builders, indie hackers, and startup founders.

Login

This is an early alpha version.

Please use admin@example.com as your email and any password for logging in.

The app functions similarly to Tinder but is intended for professional networking.

The process starts when new users sign up and provide details about their professional background, experiences, and current challenges.

Let's get started!

Let's finish creating your profile, so we can find you the best networking companions.

What's your name?

Max Prilutskiy

Where do you live?

Barcelona, Spain

What are you working on?

I'm working on a SaaS startup that helps shy people with networking

What's your latest achievement?

Last week we launched on product hunt and finished 2nd!

What's your current challenge?

I can't decided if we should invest in marketing or product development

🔍 Find companions

Subsequently, Huddle presents them with a curated selection of potential matches based on their profile.

If there's a match, the platform helps schedule a video call for both parties, thereby streamlining the networking process.

By clicking “Connect” people are taken to the Google Calendar scheduling view. (see next slide)

Jonathan Patel

67.65% match

Canada, Toronto

Works on:

Providing cybersecurity solutions for the fintech industry.

Latest achievement:

Developed an advanced threat detection algorithm for financial institutions.

Current challenge:

Addressing evolving cyber threats in the financial sector.

In terms of technology, the plan is for Huddle to be built using Llamaindex and the Zilliz vector database to store user-specific embeddings.

These embeddings are generated via a model built on Google's Vertex platform.

Truera's Trulens Eval is a fantastic option here as it ensures a faster development pace and guarantees a working prototype within quite short timeframes of the hackathon.

Let us know what you think!
