NextGen GPT AI Hackathon

About Us

Kate

I am interested in AI. I won: first place ("Prompt Hackathon" powered by FlowGPT) the prompt for creating an Anime Character - female, and Outstanding Awards for the prompt with the "Pygmalion model" for an Original Character for a cyberpunk & steampunk or fantasy universe.

Mike

Experienced Project Manager with 12 years of expertise in leading IT projects. My interests are outdoor photography and travelling.

Our problem statement

Kasia has experience as an educator for the youngest children in areas including healthy eating, climate change, and biodiversity.

During her work with educators, she noticed that they lack materials that could be used while working with children.

The solution

Easy app

A simple application for preschool educators.

We used: Streamlit, OpenAi (dall-e-3), Clarifai.

Play and education

The application prepares materials for classes that both teach and entertain.

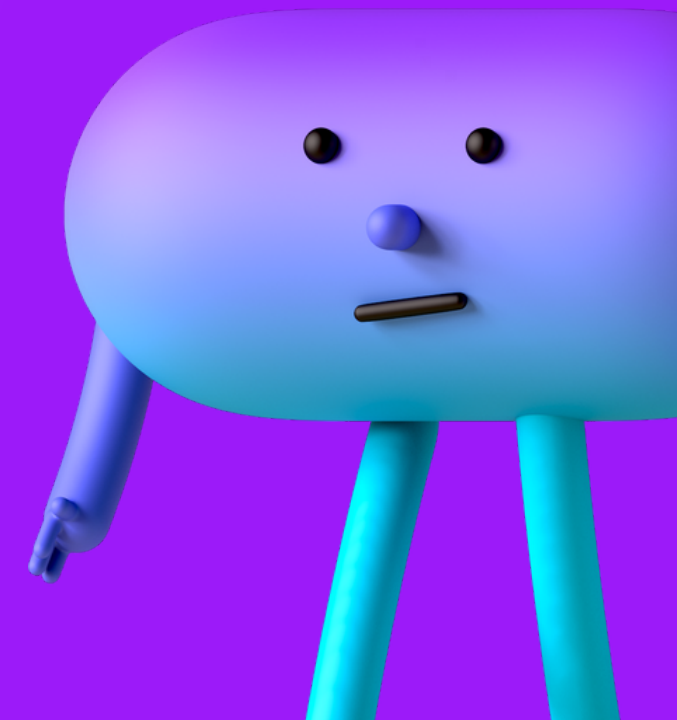

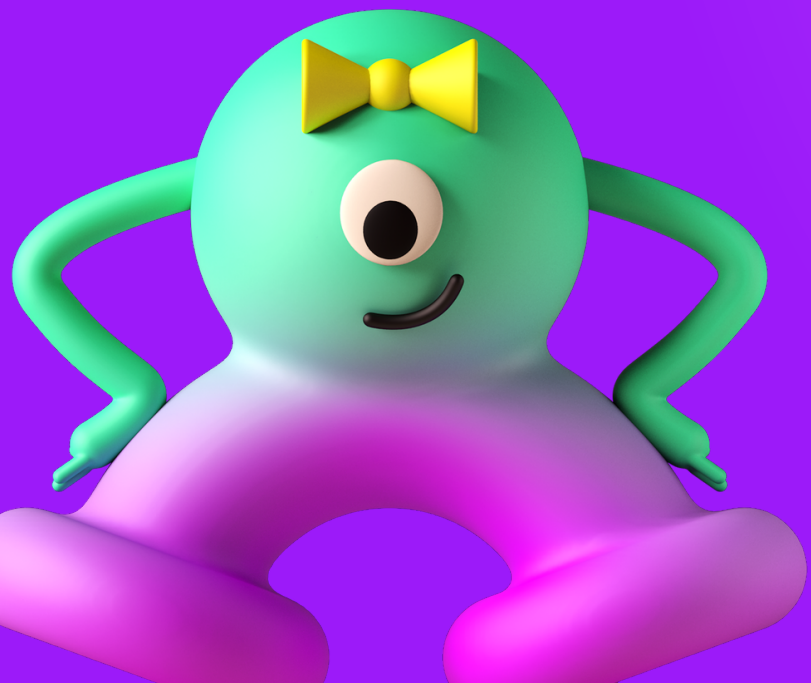

Process

The educator enters the topic of the lesson.

The program generates the material for him/her, which he/she then downloads.

The material is printed and distributed to the children.

Colorful Minds App

Your materials for classes with children

Another materials

Hi, I will prepare a coloring page for preschool children.

Provide the topic of the lesson.

climate changes

Prepare material

Next steps

Development of
types of materials

Adding additional age
groups

Market opportunity

Thank You
