TALKTRIUNITY

TEAM RHINESAUR

ENABLING AI FOR ALL PEOPLE

HIGHLIGHTS:

- A multimodal input and output tool to enable the disabled people to live a better life.

- We leveraged multiple models like GPT-4-Turbo, Whisper and Clarifai's Text to Speech Model to interact in multiple modalities.

- We used another sign language to text converter model for visual inputs.

- Overall, you can interact in any of the following modes: vision, audio and text and the model outputs in either audio or text.

- With this, we decrease the barrier for disabled people to use chatbots with multiple modalities.
