

AI-Assisted Development Tools for Enhanced Productivity and Project Comprehension

Students Details:

- **Shravan Revanna**
Dept. of Computer Science and Engineering (Artificial Intelligence and Machine Learning)
M S Ramaiah Institute of Technology
Ph: 9945332995
Email ID: shravanrevanna@gmail.com
- **Yugesh K**
Dept. of Computer Science and Engineering (Artificial Intelligence and Machine Learning)
M S Ramaiah Institute of Technology
Ph: 9740204696
Email ID: yugesh0803@gmail.com
- **Namratha v Jakati**
Dept. of Computer Science and Engineering (Artificial Intelligence and Machine Learning)
M S Ramaiah Institute of Technology
Ph: 7975652759
Email ID: namrathajakati@gmail.com
- **Akhilesh**
Dept. of Information Science and Engineering.
M S Ramaiah Institute of Technology
Ph: 8618139586
Email ID: akhilkotegar@msrit.edu

INTRODUCTION:

The rapid evolution of software development demands efficient methodologies for developers to navigate and comprehend extensive codebases and project architectures swiftly. The challenge of integrating into diverse project environments and understanding their intricate structures significantly impacts productivity. This project introduces an innovative solution to address these challenges, aiming to enhance the way developers interact with and manage software projects.

OBJECTIVES:

The project's primary goal is to create an AI-Assisted Development Tool that serves as an all-encompassing resource for developers. By automating code explanation and summarization, employing predictive analytics for project management, and providing an AI-driven chat interface for real-time guidance, this tool seeks to elevate developer productivity and streamline project comprehension.

SOLUTION:

The proposed tool integrates a sophisticated AI framework designed to analyse complex codebases, delivering concise, understandable summaries and insights. Leveraging pre-trained Large Language Model (LLMs), the tool will offer descriptive analytics to aid in efficient project understanding, identifying potential bottlenecks and optimising task flows. An intuitive, conversational AI interface will facilitate personalised, context-sensitive interactions, enabling developers to gain a deeper understanding of their projects and tasks. We employ a specialised local vector database to house project code embeddings, enriching context for tailored Large Language Model (LLMs) in code generation. This integration sharpens the precision and efficiency of AI-driven development workflows.

CONCLUSION:

The development of the AI-Assisted Development Tool is expected to revolutionise software development workflows, significantly reducing the time required for developers to acclimate to new projects and enhancing their ability to manage tasks effectively. This tool promises to improve software quality, foster collaboration, and increase the overall efficiency of development teams, contributing to the success of complex software projects.

KEYWORDS:

AI-Assisted Development, Automated Code Summarization, Predictive Project Analytics, Conversational AI Interface, Software Development Productivity.
