Artificial intelligence

Problem :

Paralyzed people have a difficulty to call a nurse by pressing the button, not only a paralyzed people, also people who have difficulty to talk or to explain what they want (deaf people), it is also available for them.

Solution :

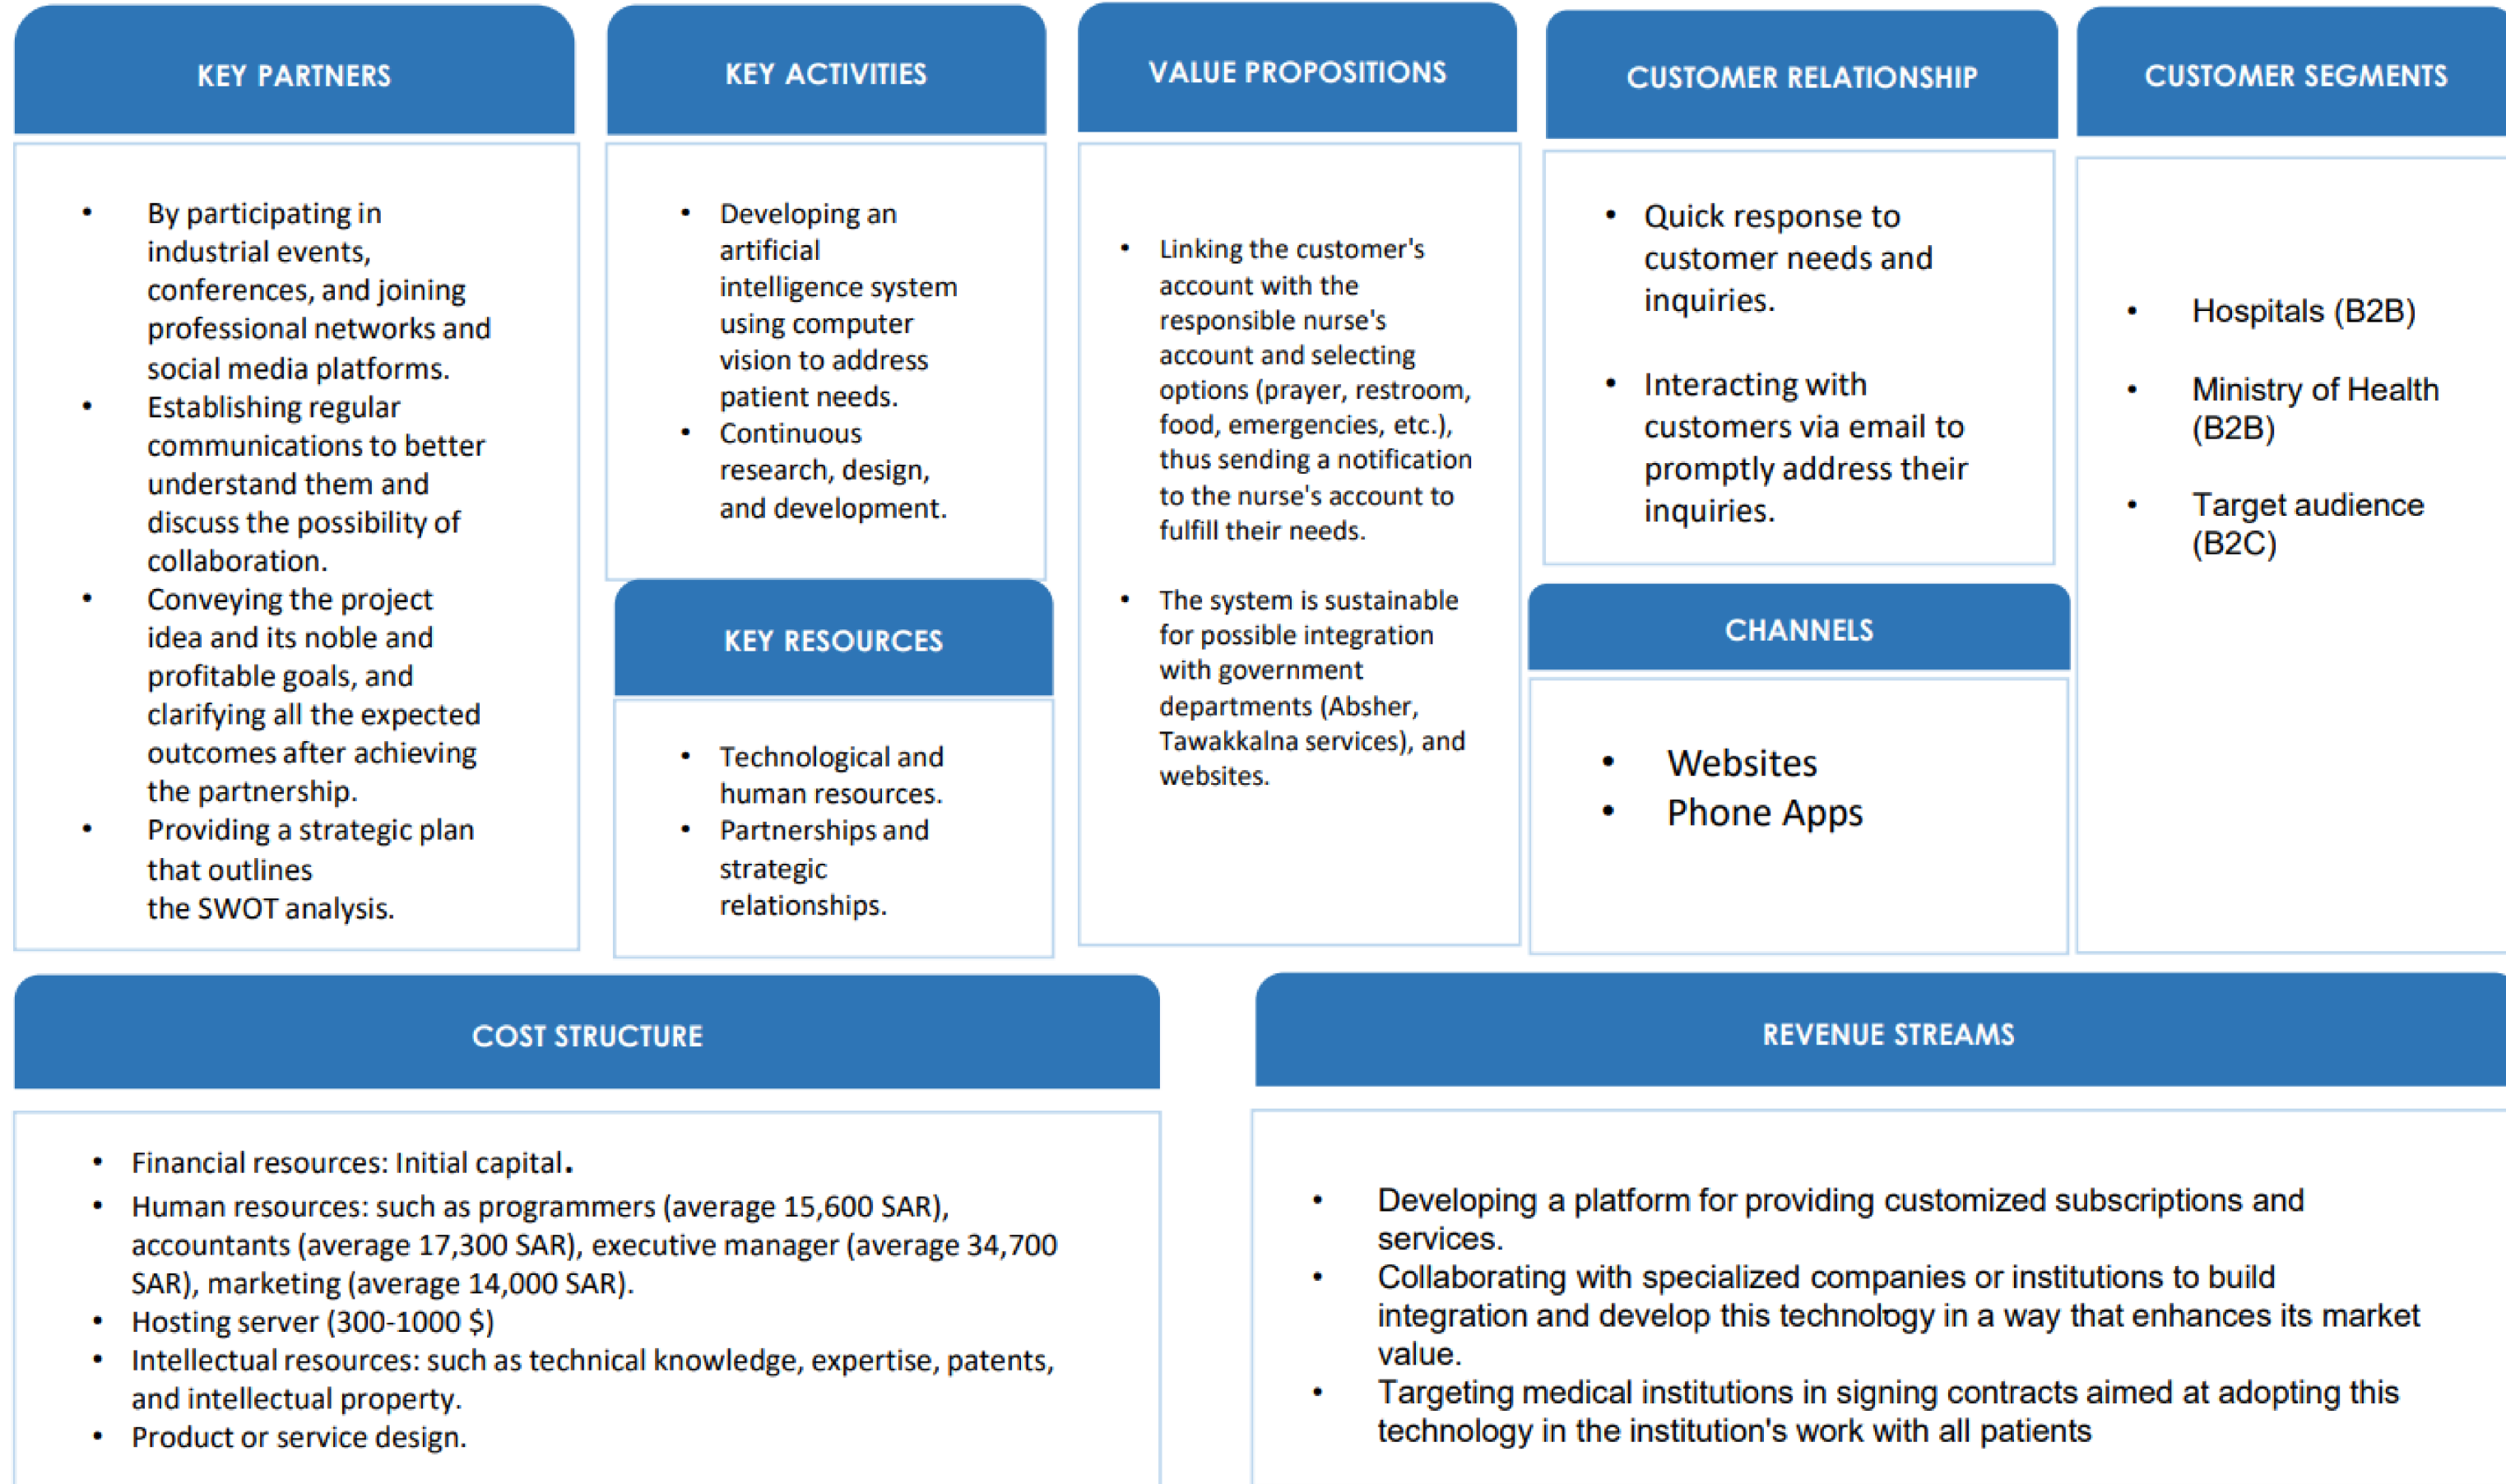

Artificial Intelligence system supported by computer vision. involves a screen placed in front of the patient, and through eye movements, the patient can select the option by blinking. The system then directly communicates the patient's needs and their name to the nurse.

Market Size:

Bussines Model:

Revenue stream :

- Developing a platform for providing customized subscriptions and services.
- Collaborating with specialized companies or institutions to build integration and develop this technology in a way that enhances its market value.
- Targeting medical institutions in signing contracts aimed at adopting this technology in the institution's work with all patients

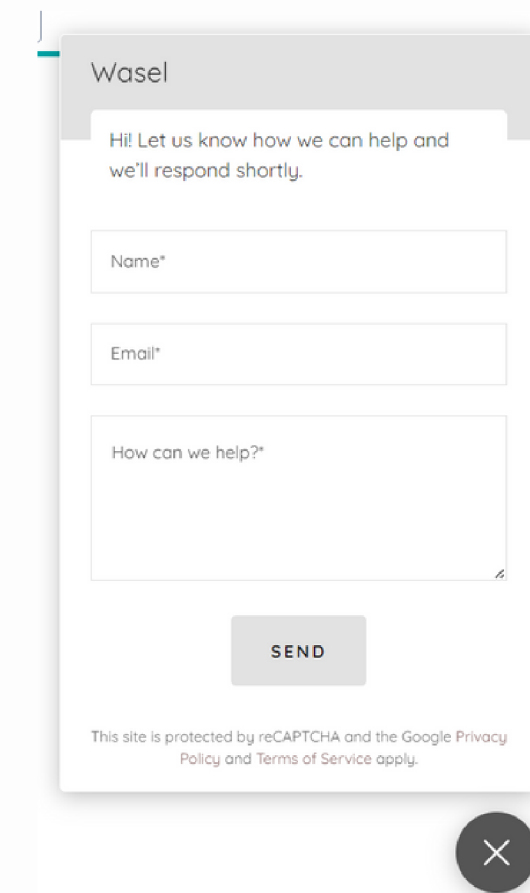

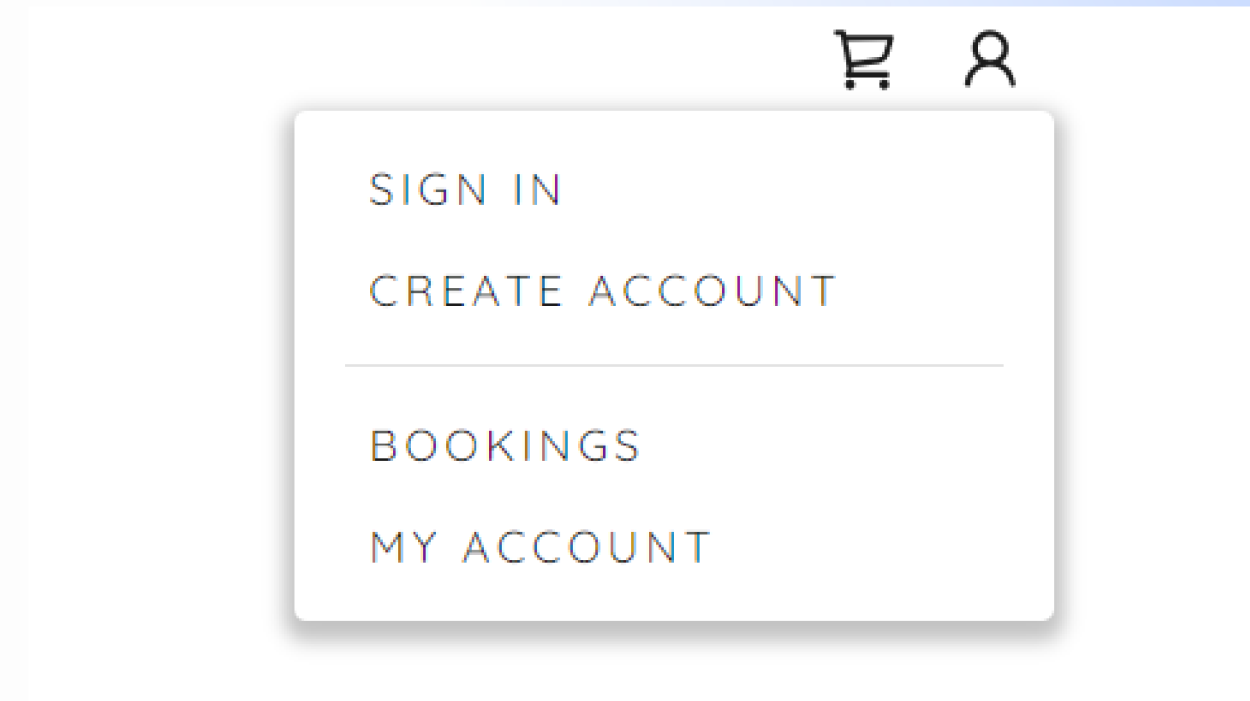

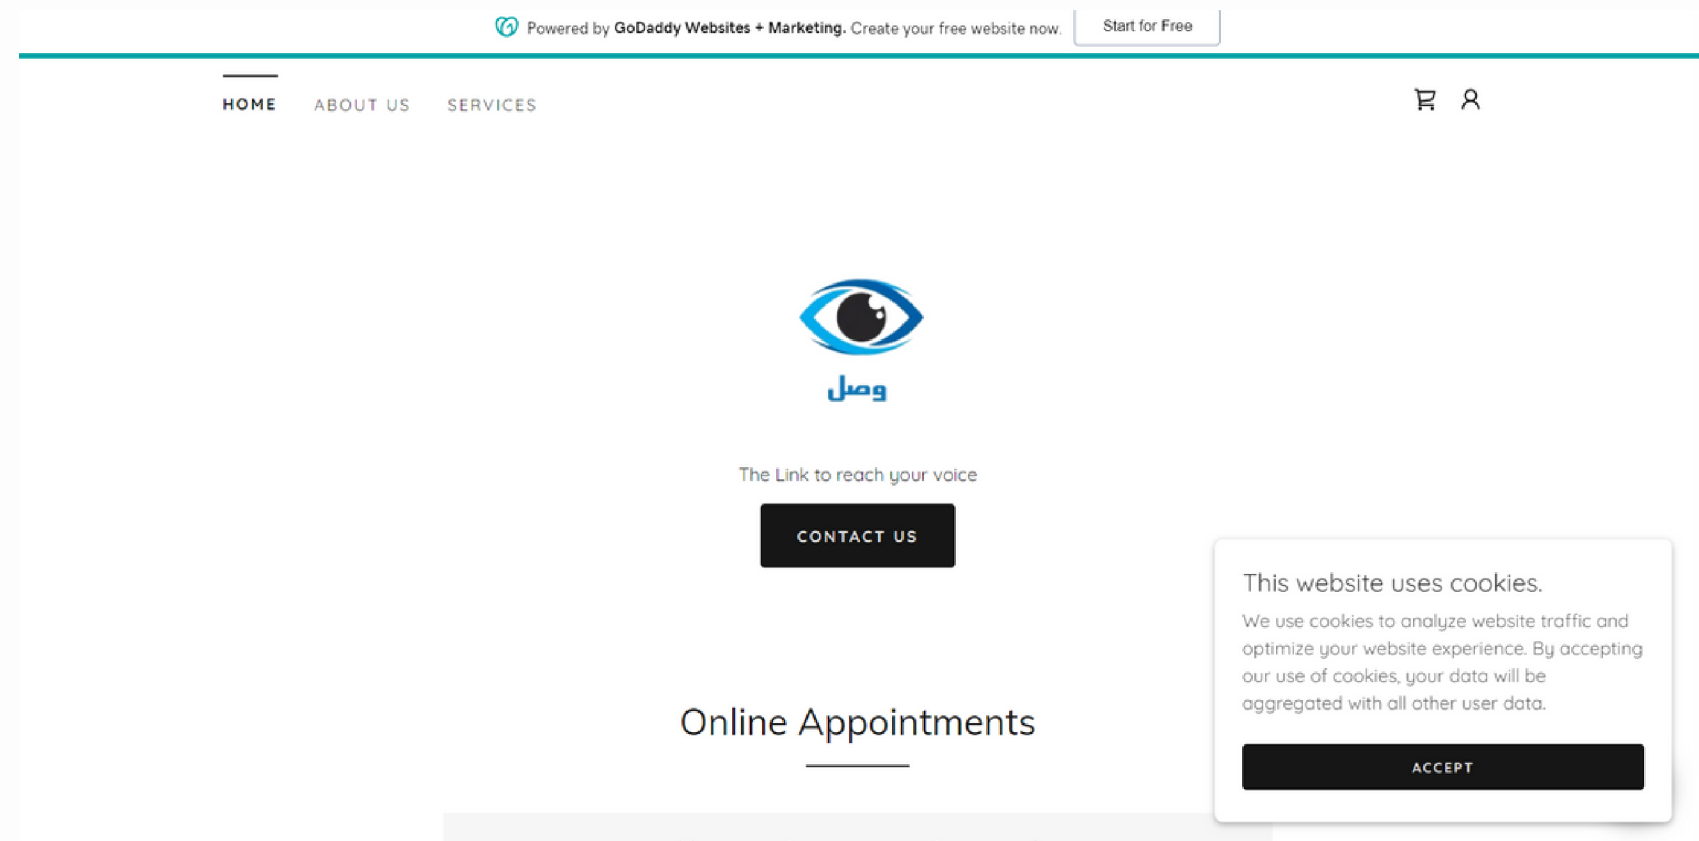

Next steps or Backlogs :

For the near future Wasel is willing to reach most of the goal group, by helping them not only in the hospital.

About us

"Wasel" project is an artificial intelligence system supported by computer vision. It assists individuals with physical disabilities and those who are unable to speak by providing an interface that supports eye-controlled navigation to meet their needs. The purpose of the "Wasel" project is to provide an AI system that utilizes computer vision to assist individuals with physical disabilities and those who are unable to speak. It offers an interface that enables control through eye movements to meet their specific requirements.
