

# Meww - chat with code

# Welcome!

Meww is an innovative **chat application** that integrates coding capabilities. It provides a unique platform for users to communicate and collaborate on coding projects

# How to use

Just add **github URL** and chat with your **code**

```
https://github.com/Ayush0054/pdf-chatbot
```

Status: Successfully fetched repo details

Time taken: 11742 ms

to use it. For example, in your `pages/index.tsx` file, you can add the following import:

```
import { motion } from "framer-motion";
```

### Step 3: Integrate Framer in your components

Once you have imported the Framer library, you can start using it in your components. Here's an example of how you can use Framer to animate a div element:

```
import { motion } from "framer-motion";

const IndexPage = () => {
  return (
    <div>
      <motion.div
        initial={{ opacity: 0, y: 20 }}
        animate={{ opacity: 1, y: 0 }}
        transition={{ duration: 0.5 }}
      >
        This is a Framer-animated div.
      </motion.div>
    </div>
  );
};
```

how to use framer here
