Build the best product that allows user to find movies/books he likes.

Goals

Offer Users the best experience when searching for Movie/Book they like.

By end of the year, our app will:

- Be twice as fast so we can offer a truly fun experience.

- Have analytics and A/B testing capabilities so we can learn about more ways to make searching easy and fast.

- Mobile Integration.

Feature highlights

The Tasks we worked on:

Recommendation System

Our project's primary goal is to empower users with the ability to effortlessly discover their favorite movies or books simply by describing them.

The app will leverage advanced algorithms to analyze user-provided descriptions and generate accurate recommendations tailored to individual preferences. This streamlined approach aims to enhance user satisfaction by eliminating the need for complex search queries and providing intuitive, personalized results.

Trulens Evaluation

This Feature was done to make sure the app works properly.

As a user, I'd like to see how certain the app is answering my demand. I'd like see as a developer if the app corresponds exactly to the specs.

Appendix

Risks and challenges, next steps.

Risks and challenges

Here are the challenges we faced

- Improvement of speed is critical for performance, but since the team hasn't done this before, we're faced with a lot of unknowns. This means implementation could take longer than expected.

- Using Trulens for testing.

Next steps

What needs to happen before you and your team can start turning this roadmap intro reality?

- Get Leaders advice.
- Gather investor feedback
- Scope remaining tasks
- Get all of this done by End of May.

Thank you
