ALICE **PROJECT**

The Power of AI in Planning Process

“

**BUSINESSES THAT PLAN GROW 30%
MORE QUICKLY THAN THOSE THAT
DON'T PLAN**

- Journal of Management Studies

”

BlazzAI

➔ PROBLEM

Many small businesses struggle with ineffective planning, often exacerbated by the challenge of **managing multiple productivity tools** and platforms. This can lead to missed deadlines and disorganized workflows.

Time constraints, the lack of a **platform that unifies these tools**, and the absence of expert guidance further hinder efficient management of these workflows.

OUR SOLUTION

Alice Project revolutionizes small business management by providing a platform that seamlessly integrates multiple productivity tools.

Through **Synapse Copilot**, Alice achieves seamless integration of external apps with its intuitive interface, enabling users to automate task management and optimize workflows with a fluid user experience.

REVENUE STREAM

Our revenue model is based on a freemium and premium subscription approach.

In the freemium model, users have access to basic features with a limited number of API calls and uses, allowing them to experience Alice's core capabilities.

This encourages upgrades to premium plans for unlimited access and additional functionalities.

BlazzAI

NEXT STEPS

Looking ahead, we aim to expand Alice's capabilities by integrating more SaaS tools and enhancing our AI model. We're also working on enhancing our AI capabilities to provide even more intelligent assistance.

**BIG
THINGS
COMING!**
