

BLOOM

A close-up photograph of a pink rose bud on a green stem. The rose is in the lower right quadrant of the image. A large, dark, rounded rectangular overlay covers the upper half of the image, serving as a background for the title and tagline.

Empowering individuals to achieve their best life through personalized simulations and synthetic data-driven insights.

Problem

Individuals often face complex life decisions, such as choosing a career path, committing to a relationship, or making significant purchases, without fully understanding how these decisions align with their core values.

This misalignment can lead to dissatisfaction, stress, and a lack of fulfillment.

Solution

We address the problem by providing a tool called Bloom that allows users to explore different life scenarios and assess how well each scenario aligns with their personal values.

By using synthetic data and value alignment metrics, the simulator offers insights into potential outcomes, helping users make more informed, value-consistent decisions that enhance their overall well-being and life satisfaction.

How it works

1

Exploration

Bloom allows users to explore and compare various life decisions by simulating different scenarios and evaluating their alignment with personal core values.

2

Synthetic Data

By leveraging synthetic life event data and value alignment metrics, the tool provides actionable insights, guiding users towards decisions that are more likely to result in fulfillment and alignment with their values.

3

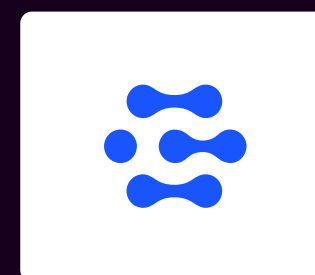

Consultation

Users can download a detailed PDF report of their simulated scenarios and value alignment outcomes, which they can use for consultation with professionals such as a counselor, clergyman, or manager.

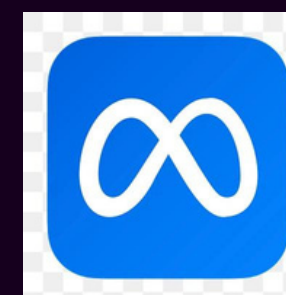

Technology

Llama 3.1 generative AI model from Meta, hosted on the Clarifai platform, was used to synthesize the value alignment outcomes.

Competition

While Bloom is a unique tool with its specific focus on simulating life decisions based on personal core values using synthetic data, there are some existing products and tools that share similar concepts or features.

BetterUp

BetterUp provides coaching services that focus on personal development, well-being, and alignment with personal values and goals. Their platform includes assessments and tools to help users explore how their decisions align with their broader life objectives.

Reflectly

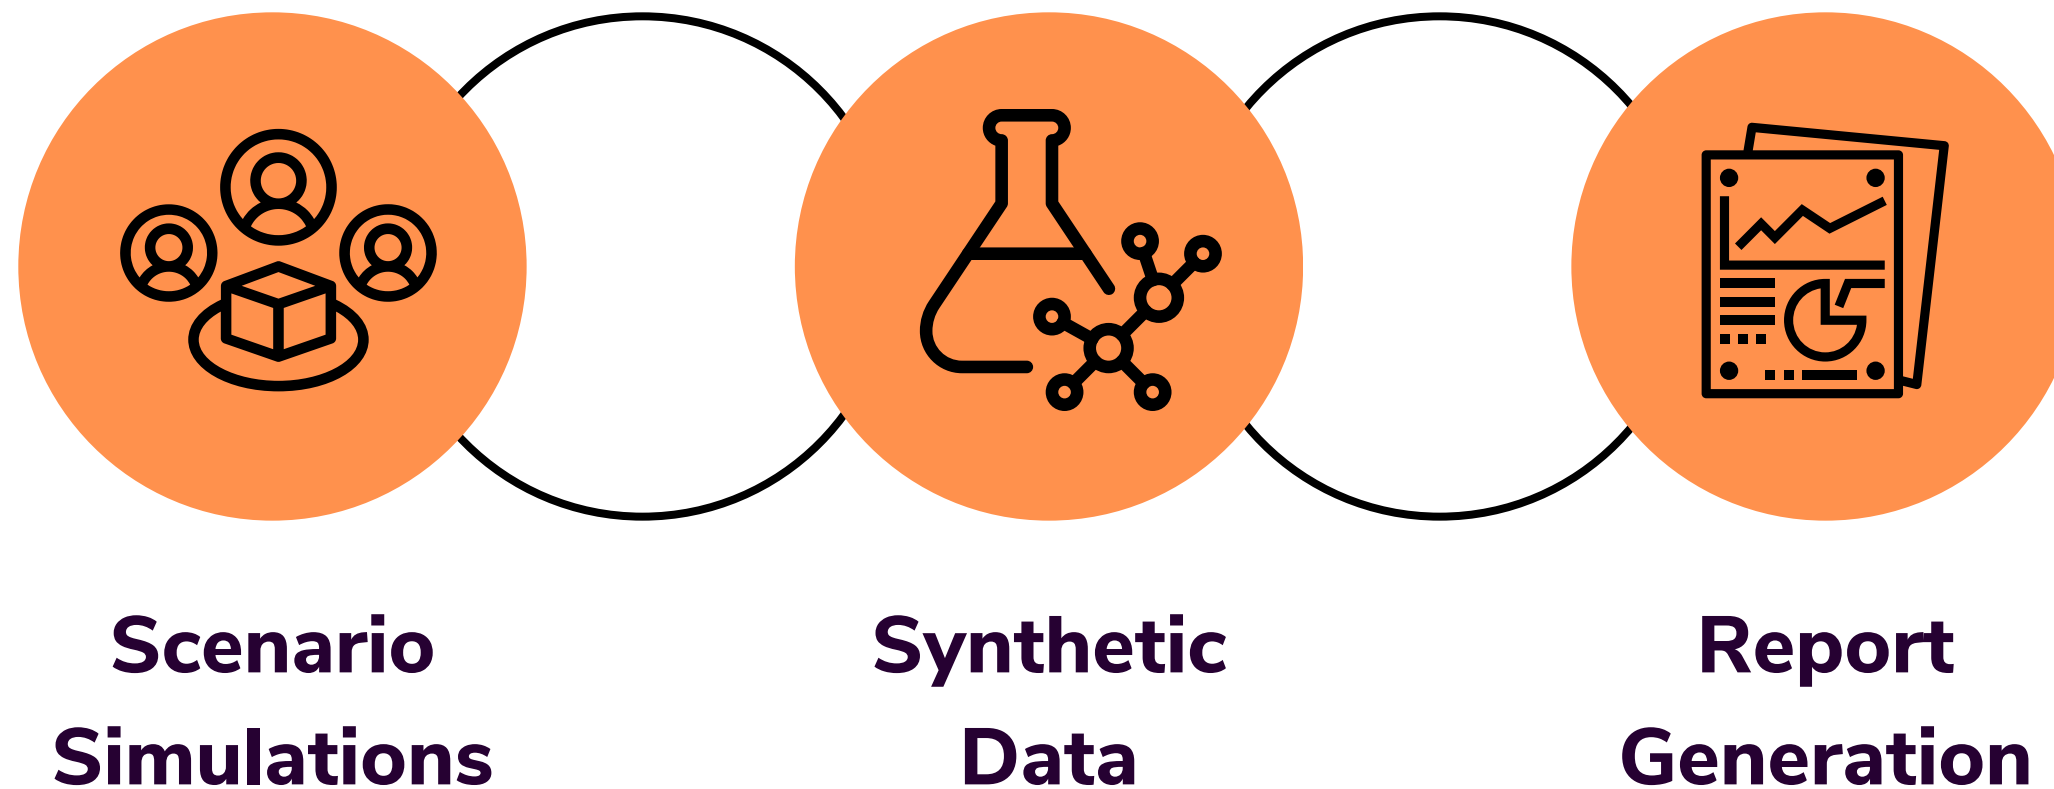

Reflectly is a journaling app that encourages users to reflect on their daily experiences and decisions. It helps users become more aware of how their actions align with their values and overall life goals.

Lifetick

Lifetick is a goal-setting and achievement platform that encourages users to set goals based on their core values. It includes tools to track progress and evaluate how well users' actions align with their values.

Competitive Advantages

Competitors' products offer unique features for understanding personal values and making decisions that align with them, but most do not use synthetic data or provide scenario simulations like Bloom.
