Intervuo

Make the interview process easier

Problem & Solution

⚠ Problem

- Interviewing multiple candidates is time-consuming
- Human interviews can vary in question delivery and candidate assessment
- Body language is often subjective and used in judgment

💡 Solution: Intervuo

- Intervuo can speed up the recruitment process
- AI bots can standardize interviews by asking job-specific questions
- AI interviews focus on the content and quality of responses, rather than subjective cues

AI Assistant Features

Voice-Powered Interaction

- Natural conversation using Elven Lab model
- Speak instead of typing for seamless interaction

Customizable Behavior

- Define AI bot reactions and responses
- Set personalized greetings and prompts

Knowledge Integration

- Upload company-specific files and documents
- Provide text descriptions for specialized knowledge

Web-Based Configuration

- Easy-to-use web application for setup
- Enter detailed information about AI behavior

END OF THE INTERVIEW

PLEASE NOTE ⚠️

- Intervuo is an application that was started before 11 days, so please be aware that the content of the files or information given to the RAG pipeline is what you specify when creating the agent. Blocking any offensive speech or adding nonsense is up to the knowledge of the AI model we use. Also note that this is not even an MVP or 0.0 release, we will be working on it after the results are in.

Technologies 🤖

- Elevenlabs API (sorry for the typo in the third slide)
- OpenAI (Gpt4o models and embeddings)
- Django for backend
- Node JS for frontend

HAPPY HACKING

Have an amazing time in Poland.
