This image is a comparison table that highlights key features and characteristics of four popular microcontroller and processor architectures: **8051**, **PIC**, **AVR**, and **ARM**. Let's break down each row: 1. **Bus width:** **8051:** Primarily uses an 8-bit bus for its standard core. This means it processes data in 8-bit chunks. **PIC:** Offers more flexibility with 8-bit, 16-bit, and 32-bit bus widths, indicating a range of PIC microcontrollers with varying
